NOTES:

1. Chip seal markers are available in both the "L" and "T" designs (see sheet 2) with one or two clear plastic covers. "T" markers should be used on roadways with volumes greater than 5000 AADT.

2. The two options shown above (two lane and four lane) are a "minimum" design - one marker per 40 feet. The designer may require two or three markers per 10 foot broken line segment.
