NOTES:

1. Mileposts and other reference location signs shall be placed on the right-hand side of the roadway, facing approaching traffic. Mileposts and other reference location signs may be placed back to back on a single post in medians or on one side of a two-lane conventional roadway or at the direction of the Engineer.

2. A new milepost or other reference location sign shall be installed in the same longitudinal location as the corresponding existing milepost or other reference location sign, unless otherwise directed by the Engineer. If, physical conditions dictate that a milepost or other reference location sign cannot be installed at the appropriate location, it may be moved, back to back in accordance with Note 1, or moved up to 50 feet upstream or downstream, with the approval of the Engineer. If a milepost or other reference location sign cannot be installed within 50 feet of the appropriate location, it should be omitted.

3. Offset is generally a minimum of 1/2 ft from edge of pavement to the near edge of the milepost or other reference location sign, but may be as close as 6 ft as site conditions. Mileposts or other reference location signs placed in areas with guardrail may be placed either in line with the guardrail posts, or 2 ft behind the face of guardrail. Lateral offset may be adjusted to improve visibility, to not obstruct other signs, or for other reasons. Mileposts or other reference location signs shall be maintained to ensure that offsets may be offset as little as 2 ft, if a larger offset is impractical.

4. Designs and layouts for mileposts, and other reference location signs may be found in the Arizona Manual of Approved Signs (010 Series sign).

5. In specific locations subject to frequent theft or vandalism of mileposts or other reference location signs, signs without mile numerals may be installed in lieu of a sign with mile numerals. However, for this case, the mileposts or other reference location signs immediately upstream and downstream of the sign should display numerals.

6. See the Standard Specifications or project special provisions for details of payment for mileposts or other reference location signs, including payment for posts, foundations, and other items.
