MARICOPA COUNTY TRANSPORTATION EXCISE TAX OFFICIAL FORECAST UPDATE RISK ANALYSIS OF EXPECTED VALUES

Introduction

In 1985, the voters of Maricopa County approved Proposition 300 to establish a ½ cent transportation excise (sales) tax for construction of a regional freeway system within the county. The ½ cent sales tax was approved for a period of 20 years and ended on December 31, 2005.

On November 2, 2004, Maricopa County’s voters approved Proposition 400 which extended the ½ cent sales tax for another 20 years through December 31, 2025. The sales tax extension is used for construction of new freeways, widening of existing freeways and highways, improvements to the arterial street system, regional bus service and other special transportation services, and high capacity transit services such as light rail, bus rapid transit and express buses.

This document contains the official forecast of expected values for the Maricopa County Transportation Excise Tax for the period FY 2015–2026 as developed by the Arizona Department of Transportation (the Department) in cooperation with the Maricopa Association of Governments and Valley Metro.

Background

Since 1986, the Arizona Department of Transportation (the Department) has used a comprehensive regression-based econometric model to estimate Transportation Excise Tax revenues for Maricopa County. These revenues, which flow into the Regional Area Road Fund (RARF), are the major funding source for the Maricopa County Freeway Program.

The revenue forecast is highly dependent on estimates of independent variables. In order to deal with variability between estimated and actual values, the Department introduced the Risk Analysis Process (RAP) in 1992. The RAP relies on probability analysis and the independent evaluation of the model’s variables by an expert panel of economists. The process results in a series of forecasts, with specified probabilities of occurrence, rather than a single or “best guess” estimate.

Enhanced forecasting accuracy was achieved in July 1996, when Hickling Lewis Brod Inc. (HLB) working in conjunction with Dr. Dennis Hoffman of Arizona State University, incorporated economic data and independent variables which were not included in the 1986 model.

In September 2005, the Department had HDR Decision Economics re-examine the structure of the RARF model and re-evaluate the set of explanatory variables used in the production of the RARF revenue forecasts. Three new variables (U. S. Housing Starts, Sky Harbor Passenger Traffic and Maricopa County Total Non-Farm Employment Growth) were added to the existing list of variables used in the RARF regression equations. The September 2010 panel members requested the Maricopa County per capita personal income variable to be in nominal dollars instead of real dollars. In September 2011, the prime interest rate variable was replaced by the 30 year mortgage rate variable and the U.S. housing starts variable was removed from the model. In September 2014, Phoenix-Mesa Gateway Passenger Traffic was combined with Phoenix Sky Harbor Passenger Traffic to form a Phoenix Sky Harbor/Gateway airports passenger traffic variable.

The independent variables contained in the current model are:

1. Maricopa County nominal personal income growth
2. Maricopa County population growth
3. Maricopa County construction employment growth
4. Phoenix consumer price index (CPI)
5. Phoenix Sky Harbor/Gateway airports passenger traffic growth
6. Maricopa County total non-farm employment growth
7. 30 year mortgage rate

Risk Analysis Panel

The Risk Analysis Process (RAP) relies heavily on the judgments of an expert panel of economists to provide information critical to the forecasting process. In August 2014, a panel of eleven economic and financial experts representing public, private, and academic sectors submitted their individual estimates of the model’s independent variables and comments on the future economic outlook. The information gathered from the panelists was input into the forecasting model to produce a series of forecasts with associated probabilities of occurrence. The panelists’ inputs are reflected in the attached tables in this report.

Model Results

This year’s panel inputs produced a mean forecast of \$5,639.3 million for the period FY 2015-2026 with a compound growth rate (CGR) of 4.9 percent. The Department’s Official Forecast for FY 2015-2026 totals \$5,646.4 million with a compound growth rate of 4.5 percent. This year’s official forecast is \$120.3 million lower than last year’s official forecast.

The Official Forecast result incorporates the 50 percent confidence interval growth rate amount for each year of the forecast except for FY 2015. The FY 2015 forecast of \$378.4 million was developed by ADOT staff independently of the econometric model using time series techniques and historical and projected growth rates from the model.

FY 2015 Official Forecast Results (Dollars in Millions)			
<u>Fiscal Year</u>	<u>Mean Forecast</u>	<u>Official Forecast</u>	<u>Confidence Level</u>
2015	\$366.8	\$378.4	
2016	394.0	402.0	50%

Average CGR	4.6%	4.5%	

Note: /1 Reflects the end of the one-half cent transportation excise tax extension on December 31, 2025

Summary

The Department's Official Forecast for FY 2015-2026 totals \$5,646.4 million, which is \$120.3 million less than the November 2013 Official Forecast. The RAP results reflect the panel members' continued pessimism regarding Maricopa County's population and job growth with concern that the growth rates may not return to the levels experienced prior to the Great Recession. Compared to last year, the panel inputs for Construction Employment, Non-Farm Employment, Phoenix CPI, and the 30 Year Mortgage Rate were lower in the first few years and then came in higher for the remainder of the forecast period. This year's panel inputs for Phoenix Sky Harbor/Gateway Airports Traffic were lower than last year's panel inputs for Phoenix Sky Harbor Traffic for all years in the forecast period except for FY 2018. Maricopa County Population Growth and Nominal Personal Income Growth both saw lower expected growth rates through the entire forecast period compared to last year's panel inputs.

Supplementary Information

The remainder of this report presents supplementary information on the detailed results of the RAP model and Risk Analysis Process. While the Official Forecast period is FY 2015-2026, panel inputs were requested for FY 2015-2019, 2024 and 2026. Data displayed for other than the requested years has been extrapolated.

RARF OFFICIAL REVENUE FORECAST DISTRIBUTION
(Current Dollars in Millions)

Fiscal Year	Regional Area Road Fund (RARF) /1		Public Transportation Fund (33.3%)	Total
	Freeways (56.2%)	Arterial Streets (10.5 %)		
2015	\$212.7	\$39.7	\$126.0	\$378.4
2016	225.9	42.2	133.9	402.0
2017	236.6	44.2	140.2	421.0
2018	248.3	46.4	147.1	441.8
2019	258.6	48.3	153.2	460.1
2020	269.3	50.3	159.5	479.1
2021	280.1	52.3	165.9	498.3
2022	291.8	54.5	172.9	519.2
2023	303.7	56.7	180.0	540.4
2024	316.4	59.1	187.5	563.0
2025	329.7	61.6	195.3	586.6
2026 /2	200.4	37.4	118.7	356.5
TOTALS	\$3,173.5	\$592.7	\$1,880.2	\$5,646.4

Note: 1/ The Regional Public Transportation Authority received a portion of the excise tax funds for transit cost which is adjusted annually by the GDP price deflator. Beginning July 1, 2005, this transfer from RARF is divided equally between MAG and the Public Transportation Fund for planning and administering the regional transportation plan.

2/ Reflects the end of the one-half cent transportation excise tax extension on December 31, 2025.

Totals may not add due to rounding.

Distribution

Per Laws 2004, Chapter 2 (HB 2456), the sales tax extension will be distributed as follows:

1. 56.2 percent to the Regional Area Road (RARF) fund for freeways and other routes in the state highway systems, including capital expense and maintenance.
2. 10.5 percent to the RARF fund for major arterial streets and intersection improvements, including capital expenses and implementation studies.
3. 33.3 percent to the Public Transportation Fund for:
 - (a) Capital costs, maintenance and operation of public transportation classifications.
 - (b) Capital costs and utility relocation costs associated with a light rail public transit system.
