# 2005 State Highway System Log

As of December 31, 2005

Please return this copy to: \_\_\_\_\_

At press time, Help assistance for this document is provided online at <http://www.azhighwaydata.com/>. Follow the “Highway Log (ADOT Inventory)” link.

Alternatively, type the following URL into your browser to get directly to the Help file.  
<http://www.itwillwork.com/shslog/WebHelp2005/Log2000.htm>

This entire book can be generated online to suit your particular reporting needs.

The above **online** methods are provided as an unpaid public service to our ADOT users.

---

You can also get the 1996-1999 and the 2000-2004 Highway Log documents (and reporting interfaces) for installation at your PC desktop. Contact the ADOT Data Bureau at 602-712-7333 to obtain an installation CD.

If you have any particular questions or comments about the Highway Log and the data that it contains, please contact the ADOT Data Bureau at 602-712-7333.

This Highway Log was assembled by Works Consulting, LLC of Gilbert, Arizona, using the best information available from multiple (but possibly not all) ADOT sources. There are known data inadequacies that cannot be overcome without significant efforts that have not yet been programmed by ADOT.

Use this information ONLY at your own risk.

**Table II  
Centerline Miles of Roadway by Route  
as of December 31, 2005**

| <b>Arizona Totals</b>   | <b>6,157.00</b>  | <b>1,793.54</b>  | <b>4.08</b>   | <b>241.96</b>         | <b>234.10</b> | <b>86.95</b>  | <b>67.48</b>  | <b>289.56</b>                  | <b>282.57</b>   | <b>8,998.73</b> | <b>6,800.69</b> | <b>90.02</b> |

HPMS CPM Target: 6,157.00 + 4.08 + 67.48 + 289.56 + 282.57 = **6,800.69** miles -- (Ownership=1, Puf<2, and Update<>"D")

**2005 Notes:**

1. The 2005 CPM figure of 6,800.34 was measured in June 2005 for the HPMS report. A natural discrepancy between this Log-based value and that HPMS value is less than a mile. This Highway Log report is considered more current. The Log final value will grow again in CY2006 and beyond as the more E-ramps are cataloged into the Highway Log.
2. As of EOY-2005, the ramp and frontage road system still has not been updated to reflect real conditions. However, localized efforts have been made in cooperation iwht ADOT Right-of-way Titles. The numbers still largely reflect the legacy Highway Log plus any changes that have resulted from new construction projects since 1993. Photo Log imagery on the ramps and frontages and additional right-of-way research (frontages and E-ramps, not on/off ramps) is still critical in confirming the extent of the declared State Highway System.

**Table XI  
Through Lane Miles by Route  
as of December 31, 2005**

**2005 Notes:**

1. Lane mileages in this report are indeed more accurate than those produced in the HPMS and no comparison should be attempted due to the FHWA rules for reporting "through" lanes in HPMS.
2. In 2005 great strides were made in accounting for mainline turning lane mileage statewide. However, many lane values on ramp and frontage systems are still unknown and some are estimated.
3. As of EOY-2005, the ramp and frontage road system still has not been updated to reflect real conditions. The numbers still reflect the legacy Highway Log plus any changes that have resulted from new construction projects since 1993. Photo Log imagery on the ramps and frontages and right-of-way research (frontages, not ramps) is still critical in confirming the extent of the declared State Highway System.
4. Shoulder laneage numbers are experimental. They attempt to quantify the lane equivalency (12-foot assumed) of the shoulders contribution to total pavement area.

**Table V(a)**  
**Centerline Miles of Roadway by District/Org**  
**as of December 31, 2005**

HPMS CPM Target: 6,157.00 + 4.08 + 67.48 + 289.56 + 282.57 = **6,800.69** miles -- (Ownership=1, Puf<2, and Update<>"D")

**2005 Notes:**

1. The 2005 CPM figure of 6,800.34 was measured in June 2005 for the HPMS report. A natural discrepancy between this Log-based value and that HPMS value is less than a mile. This Highway Log report is considered more current. The Log final value will grow again in CY2006 and beyond as the more E-ramps are cataloged into the Highway Log.
2. As of EOY-2005, the ramp and frontage road system still has not been updated to reflect real conditions. However, localized efforts have been made in cooperation iwht ADOT Right-of-way Titles. The numbers still largely reflect the legacy Highway Log plus any changes that have resulted from new construction projects since 1993. Photo Log imagery on the ramps and frontages and additional right-of-way research (frontages and E-ramps, not on/off ramps) is still critical in confirming the extent of the declared State Highway System.

**2005 Notes:**

1. Lane mileages in this report are indeed more accurate than those produced in the HPMS and no comparison should be attempted due to the FHWA rules for reporting "though" lanes in HPMS.
2. In 2005 great strides were made in accounting for mainline turning lane mileage statewide. However, many lane values on ramp and frontage systems are still unknown and some are estimated.
3. As of EOY-2005, the ramp and frontage road system still has not been updated to reflect real conditions. The numbers still reflect the legacy Highway Log plus any changes that have resulted from new construction projects since 1993. Photo Log imagery on the ramps and frontages and right-of-way research (frontages, not ramps) is still critical in confirming the extent of the declared State Highway System.
4. Shoulder laneage numbers are experimental. They attempt to quantify the lane equivalency (12-foot assumed) of the shoulders contribution to total pavement area.

HPMS CPM Target: 6,157.00 +4.08 +67.48 + 289.56 + 282.57 = **6,800.69** miles -- (Ownership=1, Puf<2, and Update<>"D")

**2005 Notes:**

1. The 2005 CPM figure of 6,800.34 was measured in June 2005 for the HPMS report. A natural discrepancy between this Log-based value and that HPMS value is less than a mile. This Highway Log report is considered more current. The Log final value will grow again in CY2006 and beyond as the more E-ramps are cataloged into the Highway Log.
2. As of EOY-2005, the ramp and frontage road system still has not been updated to reflect real conditions. However, localized efforts have been made in cooperation iwht ADOT Right-of-way Titles. The numbers still largely reflect the legacy Highway Log plus any changes that have resulted from new construction projects since 1993. Photo Log imagery on the ramps and frontages and additional right-of-way research (frontages and E-ramps, not on/off ramps) is still critical in confirming the extent of the declared State Highway System.

**Table X(b)**  
**Through Lane Miles of Roadway by District/Route**  
**as of December 31, 2005**

**2005 Notes:**

- Lane mileages in this report are indeed more accurate than those produced in the HPMS and no comparison should be attempted due to the FHWA rules for reporting "though" lanes in HPMS.
- In 2005 great strides were made in accounting for mainline turning lane mileage statewide. However, many lane values on ramp and frontage systems are still unknown and some are estimated.
- As of EOY-2005, the ramp and frontage road system still has not been updated to reflect real conditions. The numbers still reflect the legacy Highway Log plus any changes that have resulted from new construction projects since 1993. Photo Log imagery on the ramps and frontages and right-of-way research (frontages, not ramps) is still critical in confirming the extent of the declared State Highway System.
- Shoulder laneage numbers are experimental. They attempt to quantify the lane equivalency (12-foot assumed) of the shoulders contribution to total pavement area.

## Route Naming Conventions

The SHS Log labels nearly all routes with a variation of the ATIS nomenclature. Except for transient routes that have not yet been numbered, or have yet to be abandoned to local government, most routes can be described with a 5-character code.

The 5-char code encompasses the route system, system qualifier, and a 3-digit route number.

### Route Systems

I – Interstate Highway  
S – State Highway  
U – United States Highway

### System Qualifiers

null – no qualifier  
A – Alternate  
B – Business  
S – Spur  
T – Truck Route  
X – Temporary  
Y – Wye

### Route Numbers

All routes less than 3-digits are left-packed with zeros

## Junction Turn Codes

Updated July 8, 2004

Turn codes are used to describe how the roadway widens to accommodate intersecting routes. The log does not keep track of the length of each added lane.

By tracking the geometries at intersections, inferences can be made about the amount of pavement surface contributed by a turn lane.

The cardinal direction is that of increasing milepost. All J entries are recorded from the perspective of the cardinal direction. For example, the **L** and **R** intersecting street codes below are oriented to the cardinal traveller. For a non-interstate divided highway, a road to the right from the cardinal direction is also coded as a road to the right - even for the non-cardinal entry. (If this is confusing, this is an aspect that can be corrected en masse at a later date when time allows – with a bulk update query).

Turn codes are up to 5 characters long, encapsulated with square brackets [ ]. The first character designates whether the intersection is all the way across the inventory route (i.e. both or B), to the right only (R), to the left only (L), or a median crossover (U) only for making U turns.

Characters that follow indicate which turn movements are accommodated at the intersection.

[ ] Intersection Geometrics Descriptor  
B Intersecting Street to Left and Right (both)  
L Intersecting Street to Left only  
R Intersecting Street to Right only  
U Median Cross-over only

- 1 Right-turn lane in Cardinal Direction
- 2 Left-turn lane in Cardinal Direction
- 3 Right-turn lane in non-Cardinal Direction
- 4 Left-turn lane in non-Cardinal Direction

Junction Turn codes have not fully evolved for all of the SHS Log. They are put into the Log as new projects dictate, but an effort to update the entire state has not yet commenced.

## Symbol (Sym) Types Abbreviation - Description

AL – Auxiliary Lane  
BR – Bridge  
CG – Curb and Gutter  
CW – Crosswalk  
EB – Eastbound Carriage Way of Divided Highway  
EQ – Equation of mileposting  
FR – Frontage Road  
IS – Inspection Station  
J – Junction  
JB – Jurisdictional Boundary  
LT – Left Turn Lane  
MD – Median  
NB – Northbound Carriage Way of Divided Highway  
OP – Overpass  
PL – Passing Lane  
RA – Rest Area  
RT – Right Turn Lane  
SB – Southbound Carriage Way of Divided Highway  
SC – Striping Change  
SVP – Slow Vehicle Pullout  
TCS – Traffic Count Station  
TI – Traffic Interchange Ramp  
TN – Tunnel  
TR – Truck Escape Ramp  
UB – Urban Boundary  
UH – Undivided Highway Project  
UP – Underpass  
WB – Westbound Carriage Way of Divided Highway  
WS – Weigh Station  
X – Other Informational Item

## Surface & Shoulder Pavement Types

### Abbreviation - Description

AC – Asphaltic Concrete

AC/PCC – Thin layer of AC over PCC subpavement. (AC may be rubberized but rubberization is not signified in the Highway Log database)

AC/SAMI – AC over Asphalt-Rubber Stress-Absorbing Membrane. (AC may be rubberized but rubberization is not signified in the Highway Log)

ARSAM – Asphalt-Rubber Stress-Absorbing Membrane

BST – Bituminous Surface Treated

CCMB – Combination Concrete and Mixed Bituminous

CRCP – Continuously Reinforced Concrete Pavement

MBH – Mixed Bituminous, High Type

MBL – Mixed Bituminous, Low Type

PCC – Portland Cement Concrete

UTW – Ultra Thin Whitetopping. (A concrete mixture similar to PCC with steel shard additives to reduce cracking)

Gravel – non-paved

## Other Abbreviations

### Abbreviation - Description

aka – also known as

AADT – Average Annual Daily Traffic

Ave – Avenue

Beg – Begin

Blvd – Boulevard

*dir* CL – City Limit

*dir* UB – Urban Boundary

Dr – Drive

Elev – Elevation

Fwy – Freeway

GS – Grade Separated Highway Crossing

Hwy – Highway

IR – Indian Reservation

MI – Theoretical Route Mile

MR – Military Reservation

NF – National Forest

NM – National Monument

NP – National Park

Ovlp – Overlap

Rd – Road

RR – Railroad

St – Street

TI – Traffic Interchange

CY – Calendar Year

Where *dir* = E

for East, N for North, S for South, W for West
