
810 TRAFFIC CONTROL DESIGN GUIDELINES

ADOT Traffic Engineering Group has published the "ADOT Traffic Control Design Guidelines" (TCDG). This guideline provides information that is supplemental to the MUTCD, and is intended to enhance, amplify, and reinforce the MUTCD and to establish uniform guidance for the application of temporary traffic control devices on State of Arizona highways. The TCDG is not intended to be used as a standalone document, but in conjunction with the MUTCD.

The TCDG is published and available on the Traffic Engineering Group section of the ADOT website.
