VEHICULAR BRIDGES IN ARIZONA

■ **Geographic Data:** State of Arizona

■ **Summary of Identification and Evaluation Methods**

The Arizona Historic Bridge Inventory, which forms the basis for this Multiple Property Documentation Form [MPDF], is a sequel to an earlier study completed in 1987. The original study employed 1945 as a cut-off date. This study inventories and evaluates all of the pre-1964 vehicular bridges and grade separations currently maintained in ADOT's Structure Inventory and Appraisal [SI&A] listing. It includes all structures of all structural types in current use on the state, county and city road systems. Additionally it includes bridges on selected federal lands (e.g., National Forests, Davis-Monthan Air Force Base) that have been included in the SI&A list. Generally not included are railroad bridges other than highway underpasses; structures maintained by federal agencies (e.g., National Park Service) other than those included in the SI&A; structures in private ownership; and structures that have been dismantled or permanently closed to vehicular traffic. There are exceptions to this, however, and several abandoned and/or privately owned structures of particular importance have been included at the discretion of the consultant.

The bridges included in this Inventory have not been evaluated as parts of larger road structures or historic highway districts, although they are clearly integral parts of larger highway resources. The reason for this is that a context for the Historic State Highway System is presently under development but not yet completed. Similarly, some of the bridges listed here may be considered as contributing elements to larger historic districts for reasons other than their significance as transportation- or engineering-related resources, but this consideration lies outside the scope of this Inventory. Rather, the bridges in this Inventory have been evaluated individually for National Register eligibility strictly on the basis of the criteria enumerated in Section F.

By inventorying structures on a statewide basis, the study provided a database and the contextual background by which individual structures can be evaluated for historical and technological significance. This information will aid long-range policy and funding decisions at the outset of the planning process and allow enlightened, streamlined review of proposed maintenance, rehabilitation and replacement projects. Additionally, it will help to guide mitigation measures for future construction projects that effect eligible structures.

The inventory began with production of a customized computer database from ADOT's Structure Inventory and Appraisal general database. With the general list of bridges in hand, the next step was to conduct literature research that would establish a historical context and would delineate important historical and technological trends to provide a point of comparison for evaluation of individual structures. Preparation of the historical context required extensive research at a number of repositories in Arizona. Contextual information relating to Criteria A and C provided the parameters for sorting the bridge database to identify a cross-section of possibly eligible bridges that merited intensive-level field survey.

VEHICULAR BRIDGES IN ARIZONA

The survey list was further refined by a review of photographs of every bridge in Arizona built before 1964, maintained by ADOT. This review of the photos eliminated bridges with obvious integrity problems (e.g., major super- or substructural modifications, deck widening, guardrail replacement) and added bridges to the survey list with aesthetic features (e.g., decorative steelwork or concrete forming) that could not be identified by the computer database. Using this methodology, about 200 structures were selected from a total of 2,504 pre-1964 bridges to include in the survey sample. As a list of all the possibly eligible structures in Arizona, the survey sample formed the basis for the intensive documentation phase of the bridge inventory. Clayton Fraser, Principal of Fraserdesign, visited every bridge in the survey sample, recording each with field notes, 35mm color slides and medium-format black-and-white photographs. Fraser also completed additional research, when necessary, at local archives.

For every one of the 2,504 bridges in the inventory, a one-page inventory form was produced, presenting property identification, structural and historical information. For each of the bridges recommended by the consultant as possibly eligible for the National Register, an expanded form was produced, which presented a more detailed construction history and statement of significance. Two photographs of the structure and a segment of a USGS quadrangle map were printed on each of the expanded inventory forms.

National Register eligibility for each bridge was evaluated according to registration requirements outlined in Section F of this MPDF. To assist with the evaluation, a numerical rating system was developed. This assigned values to such aspects of significance as construction date, span length, role in transportation and subtracted value for loss of physical integrity. Following is a statement of the numerical rating system:

Documentation (maximum 30 points)		
Date of Construction		
pre-1918		15
1918-1932		12
1933-1941		8
1942-1954		4
1955-present		0
Builder		
known, significant AZ builder		10
known, significant out-of-state builder		8
known, AZ builder		6
known, out-of-state builder		4
unknown		0
(Give half points for estimated construction date; add 5 points for earliest example of type)

National Register of Historic Places Continuation Sheet

section number **H** page **158**

VEHICULAR BRIDGES IN ARIZONA

Historical Significance (Criteria A and B; maximum 35 points)

Important early structure on important AZ route	35 max
Important structure for agency history	35 max
Important Depression-era relief agency structure	35 max
Structure with significant association to important personage	35 max
Important late structure on important AZ route	25 max
Important early structure on regular AZ route	20 max
Regular early structure on regular AZ route	15 max
Regular late structure on important AZ route	10 max
Important late structure on regular AZ route	10 max
Regular late structure on regular AZ route	5 max
Non-significant structure	0

Technological Significance (Criterion C; maximum 35 points)

Geometry / configuration

1-4 surviving examples of type in AZ	20
5-10 surviving examples of type in AZ	15
11-20 surviving examples of type in AZ	10
21-40 surviving examples of type in AZ	5
greater than 40 surviving examples	0

Number of spans

1 point for each span, up to 10 points	10
--	----

Length of individual span

steel through truss 150 feet or greater	5
steel through truss 120 feet or greater	3
steel pony or deck truss 80 feet or greater	5
steel pony or deck truss 60 feet or greater	3
steel stringer or girder 60 feet or greater	5
steel stringer or girder 40 feet or greater	3
steel arch or suspension 300 feet or greater	5
concrete arch 80 feet or greater	5
concrete arch 60 feet or greater	3
concrete slab or rigid frame 40 feet or greater	5
concrete slab or rigid frame 30 feet or greater	3
concrete girder 50 feet or greater	5
concrete girder 40 feet or greater	3
timber stringer 20 feet or greater	5
prestressed concrete girder 60 feet or greater	5
prestressed concrete girder 50 feet or greater	3

(Add 5 points for special features, such as architectural treatment, bridge builder's plate, patented features)

section number H page 159

VEHICULAR BRIDGES IN ARIZONA

Structural Integrity (maximum 20 points subtracted)		
Superstructure replaced		20 subtract
Substructure replaced		15 subtract
Superstructure moved after historic period		15 subtract
Deck widened / guardrails or deck replaced		10 subtract
Superstructure moved in historic period		5 subtract
Minor repairs or in-kind replacement		5 subtract

The consultant places a high value on archival documentation for the individual bridges. This is the reason that the Documentation section of the numerical system rates almost as highly as Historical Significance or Technological Significance. Under Documentation the points are halved for estimated construction dates, and no points at all are assigned to unknown builders. The system clearly includes a high degree of subjectivity in its application to individual structures. The assignment of points for the aspects of significance is, by definition, arbitrary. And the determination of “significant” builders and routes is placed within the province of the consultant, based on his understanding of Arizona road and bridge history. In this, the numerical system relies on the learned judgment of its user for determination of National Register eligibility—much like the National Register process itself. For this reason the rating system was not intended to be a hardline arbiter of importance, but rather a means to quantify an array of factors that contribute to relative significance.

All the structures that scored more than 50 on the 100-point scale were considered by the consultant to be definitely NRHP eligible. Many of those that scored between 40 and 50 were considered eligible, but others were not, depending on the judgment of the consultant. Only one structure that rated below 40—the Pump-house Wash Bridge [0079]—was included among the eligible bridges. It was originally listed in the National Register as part of the earlier study and has subsequently undergone substantial alterations, which accounts for its relatively low numerical rating.

Using these criteria for significance and integrity, 53 structures were identified as eligible for the National Register. Additionally, 72 structures were identified as having been previously listed in the National Register as part of the original bridge inventory. As a last step in the process, the list of structures recommended for National Register eligibility was presented to a Historic Bridge Advisory Board. Following is a list of vehicular bridges in Arizona deemed eligible for or listed on the National Register. After that is a list of all 2,504 structures included in the historic bridge inventory, giving inventory numbers, dates, structural descriptions and rating system scores.

VEHICULAR BRIDGES IN ARIZONA

Bridge Name	Str. No.	NRHP	Significance
Apache County			
Allentown Bridge	3073	listed	well-preserved example of uncommon structural type, located on major route
Sanders Bridge	3074	listed	well-preserved example of uncommon structural type, located on major route
Querino Canyon Bridge	8071	listed	well-preserved example of uncommon structural type, located on important interstate route
Concho Bridge	8480	eligible	well-preserved, early example of singular structural type
Cochise County			
Lowell Arch Bridge	0130	eligible	one of Arizona's earliest bridges, modified by WPA
Benson Highway Underpass	0262	eligible	well-preserved example of ASHD architectural treatment on urban grade separation
Benson Railroad Underpass	0264	eligible	well-preserved example of ASHD architectural treatment on urban grade separation
Benson Bridge	0350	eligible	long-span example of uncommon structural type, altered
Leslie Creek Bridge	8115	eligible	well-preserved example of now-rare standard structural type
Hereford Bridge	9214	listed	well-preserved, early example of county truss bridge construction
Dead Indian Canyon Bridge	0032	listed	well-preserved example of uncommon structural type, located on important route
Navajo Bridge	0051	listed	Arizona's most technologically significant highway bridge
Pumphouse Wash Bridge	0079	listed	aesthetically distinguished example of common structural type, altered
Midgley Bridge	0232	listed	outstanding, large-scale example of rare structural type
Water Holes Canyon Bridge	0508	eligible	outstanding example of uncommon structural type, altered
Cameron Truss Bridge	0532	eligible	outstanding example of rare structural type; pivotal crossing of major route
Glen Canyon Bridge	0537	eligible	outstanding example of uncommon structural type; major crossing of major watercourse
Walnut Canyon Bridge	9225	listed	well-preserved example of uncommon structural type
Cameron Suspension Bridge		listed	one of Arizona's most historically and technologically significant vehicular spans
Canyon Padre Bridge		listed	Arizona's first Luten arch, located on important route
Canyon Diablo Bridge		listed	well-preserved, long-span example of uncommon structural type, located on important route
Gila County			
Salt River Bridge	0037	listed	longest and oldest riveted through truss in Arizona
Salt River Canyon Bridge	0129	listed	well-preserved, oldest example of rare structural type; pivotal crossing
Pinto Creek Bridge	0351	eligible	outstanding, well-preserved example of rare, long-span structural type
Black River Bridge	3128	listed	outstanding steel truss mounted on piers of early territorial bridge
White River Bridge	3129	eligible	steel truss mounted on piers of Arizona's last covered bridge
Fossil Creek Bridge	3215	listed	well-preserved, relatively early example of AHD concrete arch construction
Reppy Avenue Bridge	8585	listed	well-preserved, short-span application of patented bridge type
Cordova Avenue Bridge	8586	listed	well-preserved, short-span application of patented bridge type
Inspiration Avenue Bridge	8587	listed	well-preserved, short-span application of patented bridge type
Keystone Avenue Bridge	8588	listed	well-preserved, short-span application of patented bridge type
Miami Avenue Bridge	8589	listed	well-preserved, short-span application of patented bridge type
Broad Street Bridge	9710	eligible	well-preserved example of common structural type, earliest of type
Pinal Creek Bridge	9711	eligible	well-preserved, relatively early example of AHD standard bridge design
Graham County			
Bylas Bridge	0498	eligible	well-preserved, large-scale example of standard structural type; major river crossing
Safford Bridge	9333	eligible	well-preserved example of large-scale beam bridge construction
Greenlee County			
Black Jack Canyon Bridge	0258	eligible	well-preserved example of uncommon structural type
Negro Canyon Bridge	0267	eligible	well-preserved example of standard bridge type, one of a group of prototypical bridges
Rattlesnake Canyon Bridge	0270	eligible	well-preserved prototype of standard structural type

VEHICULAR BRIDGES IN ARIZONA

Guthrie Bridge	0352	eligible	outstanding example of large-scale truss construction
Packer Wash Bridge	8142	eligible	well-preserved example of early standard structural type; built during Depression
Goat Camp Canyon Bridge	8146	eligible	well-preserved example of early standard structural type; built during Depression
Solomonville Road Overpass	8150	listed	one of Arizona's two oldest datable vehicular bridges, associated with early toll road
Solomonville Road Overpass	8151	listed	one of Arizona's two oldest datable vehicular bridges, associated with early toll road
Gila River Bridge	8152	listed	outstanding long-span Luten arch, built by convict labor on regionally important route
Black Gap Bridge	8534	listed	rare early structural standard, built by convict labor on regionally important route
Park Avenue Bridge	9633	listed	one of Arizona's most important early vehicular spans
Maricopa County			
Dry Wash Bridge	0015	eligible	well-preserved, early example of common structural type, located on significant early route
Mormon Flat Bridge	0026	listed	well-preserved example of rare structural type, located on significant early route
Fish Creek Bridge	0027	listed	well-preserved example of rare structural type, located on significant early route
Lewis and Pranty Creek Bridge	0028	listed	well-preserved example of rare structural type, located on significant early route
Pine Creek Bridge	0031	listed	well-preserved example of rare structural type, located on significant early route
Gila Bend Overpass	0118	listed	earliest remaining example of AHD architectural treatment on urban grade separation
Peoria Underpass	0160	eligible	well-preserved example of AHD architectural treatment for an urban grade separation
Wickenburg Bridge	0161	eligible	well-preserved example of long-span structural type; major crossing on major route
Boulder Creek Bridge	0193	listed	well-preserved example of uncommon structural type, located on significant early route
Wickenburg Underpass	0195	eligible	uncommon structural type, altered, on major highway route
Alchesay Canyon Bridge	1532	listed	oldest documented vehicular bridge in Arizona
17 th Avenue Underpass	7770	eligible	handsomely detailed, well-preserved example of Depression-era bridge construction
Gillespie Dam Bridge	8021	listed	outstanding multiple-span truss bridge; major crossing on important highway
Central Avenue Underpass	9168	eligible	well-preserved example of Depression-era bridge construction
Mill Avenue Bridge	9954	listed	one of Arizona's most historically and technologically significant bridges
Mohave County			
Arizona Spillway Bridge	3003	listed	designated as part of Hoover Dam NHL complex
Old Trails Wash Bridge	8594	eligible	well-preserved example of early standard structural type
London Bridge	8630	eligible	unique adaptation of European bridge to Western setting
Sand Hollow Wash Bridge	8662	listed	well-preserved example of uncommon structural type, on regionally important highway
Old Trails Bridge		listed	outstanding early large-scale bridge, located at major interstate crossing
Navajo County			
Side Hill Viaduct	0145	eligible	well-preserved example of singular structural type
Winslow Underpass	0194	listed	well-preserved Depression-era grade separation
Cedar Canyon Bridge	0215	listed	outstanding example of rare structural type, essentially reconstructed
Winslow Bridge	0229	listed	well-preserved large-scale bridge; important crossing on important route
Ruby Channel Bridge	0275	eligible	unaltered example of common structural type, built as part of WWII effort
Clear Creek Bridge	1038	eligible	well-preserved example of rare structural type
West Carrizo Bridge	2057	listed	outstanding multiple-span example of common structural type
Woodruff Bridge	8156	listed	unique example of structural type, once part of regionally important crossing
St. Joseph Bridge	8157	listed	one of larger-scale early bridge construction projects undertaken by Arizona county
Chevelon Creek Bridge	8158	listed	one of Arizona's most historically and technologically important vehicular spans
Tanner Wash Bridge	8160	eligible	well-preserved example of early standard structural type, on important route
East Carrizo Bridge		listed	undistinguished, relatively late example of uncommon structural type, undocumented
Holbrook Bridge		listed	longest known Luten arch built in the country
Jacks Canyon Bridge		listed	well-preserved example of early AHD concrete bridge design
Woodruff Bridge		eligible	remnant of once-important multiple-span truss bridge

VEHICULAR BRIDGES IN ARIZONA

Pima County

Wash Bridge	1020	eligible	well-preserved example of early ASHD standard bridge design; on major route
Stone Avenue Underpass	7987	listed	well-preserved example of 1930s AHD architectural treatment on grade separation
Sixth Avenue Underpass	7988	listed	well-preserved example of architectural treatment on urban grade separation
Cienega Bridge	8293	listed	well-preserved, long-span example of uncommon structural type
Fourth Avenue Underpass	8453	listed	Arizona's oldest urban grade separation

Pinal County

Casa Grande Underpass	0143	eligible	well-preserved example of Depression-era architectural detailing on grade separation
Queen Creek Viaduct	0406	eligible	outstanding, well-preserved example of rare, long-span structural type
Florence Bridge	0501	eligible	one of the most important river crossings in the state
San Tan Canal Bridge	3164	listed	well-preserved example of early concrete bridge construction
Sacaton Dam Bridge	3165	listed	outstanding large-scale concrete bridge; part of important Indian irrigation project
Queen Creek Bridge	8440	listed	well-preserved example of patented structural type, built in regionally important route
Kelvin Bridge	8441	listed	well-preserved example of patented structural type, built in regionally important route
Winkelman Bridge	8442	listed	well-preserved example of patented structural type, built in regionally important route
Devils Canyon Bridge		listed	well-preserved example of early AHD concrete bridge design
Mineral Creek Bridge		listed	well-preserved example of early proprietary bridge type
Queen Creek Bridge		listed	well-preserved example of early AHD concrete bridge design

Santa Cruz County

Santa Cruz River Bridge	8166	listed	earliest and longest concrete girder structure in use on state road system
Nogales Wash Bridge	8167	eligible	well-preserved, early example of standard structural type, on important route
Portrero Creek Bridge	8171	eligible	well-preserved, early example of standard structural type, on important route

Yavapai County

Granite Creek Bridge	0042	eligible	excellent example of early state standard bridge type
Hell Canyon Bridge	0483	eligible	outstanding example of large-scale truss construction
Black Canyon Bridge	0758	eligible	well-preserved example of welded steel construction
Wilbur Canyon Bridge	0781	eligible	well-preserved example of welded steel construction
Granite Creek Bridge	1489	eligible	relatively well-preserved example of early AHD concrete bridge design
Little Hell Canyon Bridge	3381	listed	well-preserved example of uncommon structural type, located on regionally important route
Walnut Grove Bridge	8227	listed	well-preserved early example of county-level truss bridge construction
Verde River Bridge	8236	listed	well-preserved, relatively early standard structural type, located on important highway
Cordes Bridge	8249	eligible	well-preserved example of early AHD bridge design
Lynx Creek Bridge	8256	listed	well-preserved early example of AHD bridge design
Broadway Bridge	8488	listed	outstanding early example of common structural type
Willis Street Bridge	8550	eligible	well-preserved, early example of Depression-era bridge construction
Walnut Creek Bridge	8741	listed	outstanding example of early truss construction
Perkinsville Bridge	9474	listed	outstanding example of early standard truss bridge type
Hell Canyon Bridge		listed	outstanding example of early concrete girder design and construction

Yuma County

Ligurta Underpass	8406	eligible	well-preserved example of AHD architectural detailing on grade separation
Wash Bridge	8408	eligible	well-preserved example of standard structural type, on important route
Ligurta Wash Bridge	8410	eligible	well-preserved example of standard structural type, on important route
Ocean-to-Ocean Bridge	8533	listed	one of the most important wagon bridges in Southwest
Antelope Hill Bridge		listed	one of state's most important early wagon bridges, located on important route
McPhaul Bridge		listed	extraordinary long-span example of uncommon structural type, located on important route
