

## Solve the Hidden Message about Stormwater Use the clues below

When water falls to the earth as rain, we call that STORMWATER. This water can soak into the ground or flow over different surfaces like roads, driveways and parking lots, into washes, gutters and drains, eventually making its way into storm drains that empty into our local streams, washes, rivers, and oceans. Stormwater is not treated like the water we use in our homes, so any pollutants (things like oil, chemicals, fertilizers and even pet waste) that go into a storm drain can affect the environment in a harmful way. ADOT works to reduce these pollutants and well as reduce the amount of litter on our roads that can clog freeway drains.
