County TMC-TOC	County Data Archive	traffic archive data	Existing	Information describing the use and vehicle composition on transportation facilities and the traffic control strategies employed. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
County TMC-TOC	County EMC-EOC	alert status	Planned	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
County TMC-TOC	County EMC-EOC	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
County TMC-TOC	County EMC-EOC	emergency traffic control information	Planned	Status of a special traffic control strategy or system activation implemented in response to an emergency traffic control request, a request for emergency access routes, a request for evacuation, a request to activate closure systems, a request to employ driver information systems to support public safety objectives, or other special requests. Identifies the selected traffic control strategy and system control status.
County TMC-TOC	County EMC-EOC	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
County TMC-TOC	County EMC-EOC	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
County TMC-TOC	County EMC-EOC	resource deployment status	Planned	Status of resource deployment identifying the resources (vehicles, equipment, materials, and personnel) available and their current status. General resource inventory information and specific status of deployed resources may be included.
County TMC-TOC	County EMC-EOC	resource request	Planned	A request for resources to implement special traffic control measures, assist in clean up, verify an incident, etc. The request may poll for resource availability or request pre-staging, staging, or immediate deployment of resources. Resources may be explicitly requested or a service may be requested and the specific resource deployment may be determined by the responding agency.
County TMC-TOC	County EMC-EOC	road network conditions	Planned	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.
County TMC-TOC	County EMC-EOC	road network status assessment	Planned	Assessment of damage sustained by the road network including location and extent of the damage, estimate of remaining capacity, required closures, alternate routes, necessary restrictions, and time frame for repair and recovery.
County TMC-TOC	County EMC-EOC	traffic images	Planned	High fidelity, real-time traffic images suitable for surveillance monitoring by the operator or for use in machine vision applications. This flow includes the images. Meta data that describes the images is contained in another flow.
County TMC-TOC	County Flood Warning System	environmental sensor control	Planned	Data used to configure and control environmental sensors.
County TMC-TOC	County Flood Warning System	passive vehicle monitoring control	Planned	Control commands used to control detection systems that rely on infrastructure-based identification of individual vehicles to measure travel times and other related measures by identifying the same vehicle at different points in the network. Related technologies include Bluetooth readers and license plate recognition systems.
County TMC-TOC	County Flood Warning System	roadway dynamic signage data	Existing	Information used to initialize, configure, and control dynamic message signs. This flow can provide message content and delivery attributes, local message store maintenance requests, control mode commands, status queries, and all other commands and associated parameters that support remote management of these devices.
County TMC-TOC	County Flood Warning System	signal control commands	Planned	Control of traffic signal controllers or field masters including clock synchronization.
County TMC-TOC	County Flood Warning System	signal control device configuration	Planned	Data used to configure traffic signal control equipment including local controllers and system masters.
County TMC-TOC	County Flood Warning System	signal control plans	Planned	Traffic signal timing parameters including minimum green time and interval durations for basic operation and cycle length, splits, offset, phase sequence, etc. for coordinated systems.
County TMC-TOC	County Flood Warning System	signal system configuration	Planned	Data used to configure traffic signal systems including configuring control sections and mode of operation (time based or traffic responsive).
County TMC-TOC	County Flood Warning System	traffic detector control	Planned	Information used to configure and control traffic detector systems such as inductive loop detectors and machine vision sensors.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
County TMC-TOC	County Flood Warning System	video surveillance control	Planned	Information used to configure and control video surveillance systems.
County TMC-TOC	County ITS Field Equipment	environmental sensor control	Planned	Data used to configure and control environmental sensors.
County TMC-TOC	County ITS Field Equipment	passive vehicle monitoring control	Planned	Control commands used to control detection systems that rely on infrastructure-based identification of individual vehicles to measure travel times and other related measures by identifying the same vehicle at different points in the network. Related technologies include Bluetooth readers and license plate recognition systems.
County TMC-TOC	County ITS Field Equipment	roadway dynamic signage data	Existing	Information used to initialize, configure, and control dynamic message signs. This flow can provide message content and delivery attributes, local message store maintenance requests, control mode commands, status queries, and all other commands and associated parameters that support remote management of these devices.
County TMC-TOC	County ITS Field Equipment	signal control commands	Existing	Control of traffic signal controllers or field masters including clock synchronization.
County TMC-TOC	County ITS Field Equipment	signal control device configuration	Planned	Data used to configure traffic signal control equipment including local controllers and system masters.
County TMC-TOC	County ITS Field Equipment	signal control plans	Planned	Traffic signal timing parameters including minimum green time and interval durations for basic operation and cycle length, splits, offset, phase sequence, etc. for coordinated systems.
County TMC-TOC	County ITS Field Equipment	signal system configuration	Planned	Data used to configure traffic signal systems including configuring control sections and mode of operation (time based or traffic responsive).
County TMC-TOC	County ITS Field Equipment	traffic detector control	Existing	Information used to configure and control traffic detector systems such as inductive loop detectors and machine vision sensors.
County TMC-TOC	County ITS Field Equipment	video surveillance control	Planned	Information used to configure and control video surveillance systems.
County TMC-TOC	County Mobile App	traffic images	Planned	High fidelity, real-time traffic images suitable for surveillance monitoring by the operator or for use in machine vision applications. This flow includes the images. Meta data that describes the images is contained in another flow.
County TMC-TOC	County Mobile App	traffic information for media	Planned	Report of traffic conditions including traffic incident reports for public dissemination through the media. The reports may also include information on diversions and alternate routes, closures, and special traffic restrictions in effect.
County TMC-TOC	County Public Works	environmental conditions data	Planned	Current road conditions (e.g., surface temperature, subsurface temperature, moisture, icing, treatment status) and surface weather conditions (e.g., air temperature, wind speed, precipitation, visibility) as measured and reported by fixed and/or mobile environmental sensors and aggregated by the data collector. Attributes relating to the data collection (and aggregation) are also included.
County TMC-TOC	County Public Works	equipment maintenance request	Planned	Identification of field equipment requiring repair and known information about the associated faults.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
County TMC-TOC	County Public Works	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
County TMC-TOC	County Public Works	maint and constr resource request	Planned	Request for road maintenance and construction resources that can be used in the diversion of traffic (cones, portable signs), clearance of a road hazard, repair of ancillary damage, or any other incident response. The request may poll for resource availability or request pre-staging, staging, or immediate dispatch of resources.
County TMC-TOC	County Public Works	road network conditions	Planned	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.
County TMC-TOC	County Public Works	road network status assessment	Planned	Assessment of damage sustained by the road network including location and extent of the damage, estimate of remaining capacity, required closures, alternate routes, necessary restrictions, and time frame for repair and recovery.
County TMC-TOC	County Public Works	traffic images	Planned	High fidelity, real-time traffic images suitable for surveillance monitoring by the operator or for use in machine vision applications. This flow includes the images. Meta data that describes the images is contained in another flow.
County TMC-TOC	County Public Works	transportation operational strategies	Planned	Operational strategies for each operating agency in a transportation corridor, downtown area, or other travel-impacted area, providing an integrated operations strategy for the freeways, tollways, arterials, transit services, parking facilities, and other transportation-related facilities in the area. These strategies can include dynamic adjustments to transit fares and tolls, parking fees and restrictions, dynamic lane restriction changes, and other active demand management strategies.
County TMC-TOC	County Sheriff Dispatch	alert status	Planned	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
County TMC-TOC	County Sheriff Dispatch	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
County TMC-TOC	County Sheriff Dispatch	emergency traffic control information	Planned	Status of a special traffic control strategy or system activation implemented in response to an emergency traffic control request, a request for emergency access routes, a request for evacuation, a request to activate closure systems, a request to employ driver information systems to support public safety objectives, or other special requests. Identifies the selected traffic control strategy and system control status.
County TMC-TOC	County Sheriff Dispatch	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
County TMC-TOC	County Sheriff Dispatch	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
County TMC-TOC	County Sheriff Dispatch	resource deployment status	Existing	Status of resource deployment identifying the resources (vehicles, equipment, materials, and personnel) available and their current status. General resource inventory information and specific status of deployed resources may be included.
County TMC-TOC	County Sheriff Dispatch	resource request	Existing	A request for resources to implement special traffic control measures, assist in clean up, verify an incident, etc. The request may poll for resource availability or request pre-staging, staging, or immediate deployment of resources. Resources may be explicitly requested or a service may be requested and the specific resource deployment may be determined by the responding agency.
County TMC-TOC	County Sheriff Dispatch	road network conditions	Planned	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.
County TMC-TOC	County Sheriff Dispatch	road network status assessment	Planned	Assessment of damage sustained by the road network including location and extent of the damage, estimate of remaining capacity, required closures, alternate routes, necessary restrictions, and time frame for repair and recovery.
County TMC-TOC	County Sheriff Dispatch	traffic images	Planned	High fidelity, real-time traffic images suitable for surveillance monitoring by the operator or for use in machine vision applications. This flow includes the images. Meta data that describes the images is contained in another flow.
County TMC-TOC	County Website and NIXLE	incident information for public	Planned	Report of current desensitized incident information prepared for public dissemination.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
County TMC-TOC	County Website and NIXLE	road network conditions	Planned	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.
County TMC-TOC	County Website and NIXLE	traffic control information	Planned	Represents the flow of traffic control and status information between centers. This is reporting only, not actual control. This specifically includes the current state of any demand management strategies that have been implemented.
County TMC-TOC	County Website and NIXLE	traffic images	Planned	High fidelity, real-time traffic images suitable for surveillance monitoring by the operator or for use in machine vision applications. This flow includes the images. Meta data that describes the images is contained in another flow.
County TMC-TOC	County Website and NIXLE	transportation operational strategies	Planned	Operational strategies for each operating agency in a transportation corridor, downtown area, or other travel-impacted area, providing an integrated operations strategy for the freeways, tollways, arterials, transit services, parking facilities, and other transportation-related facilities in the area. These strategies can include dynamic adjustments to transit fares and tolls, parking fees and restrictions, dynamic lane restriction changes, and other active demand management strategies.
County TMC-TOC	DPS Central Communications Center	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
County TMC-TOC	DPS Central Communications Center	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
County TMC-TOC	DPS Central Communications Center	emergency traffic control information	Existing	Status of a special traffic control strategy or system activation implemented in response to an emergency traffic control request, a request for emergency access routes, a request for evacuation, a request to activate closure systems, a request to employ driver information systems to support public safety objectives, or other special requests. Identifies the selected traffic control strategy and system control status.
County TMC-TOC	DPS Central Communications Center	emergency traffic coordination	Existing	Coordination supporting disaster response including evacuation and reentry. Includes coordination of special traffic control strategies that support efficient evacuation and reentry while protecting and optimizing movement of response vehicles and other resources responding to the emergency.
County TMC-TOC	DPS Central Communications Center	resource deployment status	Planned	Status of resource deployment identifying the resources (vehicles, equipment, materials, and personnel) available and their current status. General resource inventory information and specific status of deployed resources may be included.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
County TMC-TOC	DPS Central Communications Center	road network conditions	Existing	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.
County TMC-TOC	DPS Central Communications Center	road network status assessment	Planned	Assessment of damage sustained by the road network including location and extent of the damage, estimate of remaining capacity, required closures, alternate routes, necessary restrictions, and time frame for repair and recovery.
County TMC-TOC	DPS Central Communications Center	traffic images	Planned	High fidelity, real-time traffic images suitable for surveillance monitoring by the operator or for use in machine vision applications. This flow includes the images. Meta data that describes the images is contained in another flow.
County TMC-TOC	Local Print and Broadcast Media	traffic images	Planned	High fidelity, real-time traffic images suitable for surveillance monitoring by the operator or for use in machine vision applications. This flow includes the images. Meta data that describes the images is contained in another flow.
County TMC-TOC	Local Print and Broadcast Media	traffic information for media	Planned	Report of traffic conditions including traffic incident reports for public dissemination through the media. The reports may also include information on diversions and alternate routes, closures, and special traffic restrictions in effect.
County TMC-TOC	NOAA _National Weather Service	environmental conditions data	Planned	Current road conditions (e.g., surface temperature, subsurface temperature, moisture, icing, treatment status) and surface weather conditions (e.g., air temperature, wind speed, precipitation, visibility) as measured and reported by fixed and/or mobile environmental sensors and aggregated by the data collector. Attributes relating to the data collection (and aggregation) are also included.
County TMC-TOC	Public Private Traveler Information	road network conditions	Planned	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.
County TMC-TOC	Public Private Traveler Information	traffic control information	Planned	Represents the flow of traffic control and status information between centers. This is reporting only, not actual control. This specifically includes the current state of any demand management strategies that have been implemented.
County TMC-TOC	Public Private Traveler Information	traffic images	Planned	High fidelity, real-time traffic images suitable for surveillance monitoring by the operator or for use in machine vision applications. This flow includes the images. Meta data that describes the images is contained in another flow.
County TMC-TOC	Public Private Traveler Information	transportation operational strategies	Planned	Operational strategies for each operating agency in a transportation corridor, downtown area, or other travel-impacted area, providing an integrated operations strategy for the freeways, tollways, arterials, transit services, parking facilities, and other transportation-related facilities in the area. These strategies can include dynamic adjustments to transit fares and tolls, parking fees and restrictions, dynamic lane restriction changes, and other active demand management strategies.
County Transit Kiosks	Cities and Towns Transit Dispatch	authorization request	Planned	Request to determine if a transportation user is authorized to use a particular transportation resource.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
County Transit Kiosks	Cities and Towns Transit Dispatch	fare collection data	Planned	Fare collection information including the summary of fare system data and financial payment transaction data.
County Transit Kiosks	Cities and Towns Transit Dispatch	transit stop passenger status	Planned	The number of passengers waiting at a PT stop with optional route and destination information for waiting passengers to allow current demand at each stop to be monitored and factored into current transit service operations and transit performance monitoring. The stop identity is included.
County Transit Kiosks	Cities and Towns Transit Dispatch	transit traveler request	Planned	Request by a Transit traveler to summon assistance, request transit information, or request any other transit services.
County Transit Kiosks	Local Dial-A-Ride Transit Dispatchers	transit traveler request	Planned	Request by a Transit traveler to summon assistance, request transit information, or request any other transit services.
County Transit Kiosks	NAIPTA (dba Mountain Line) Paratransit	transit traveler request	Planned	Request by a Transit traveler to summon assistance, request transit information, or request any other transit services.
County Transit Kiosks	Payment Administration Center	authorization request	Planned	Request to determine if a transportation user is authorized to use a particular transportation resource.
County Transit Kiosks	Transit Providers Dispatch (Public and Private)	fare collection data	Planned	Fare collection information including the summary of fare system data and financial payment transaction data.
County Transit Kiosks	Transit Providers Dispatch (Public and Private)	transit stop request	Planned	Notification that a transit stop has been requested by a transit user at a roadside stop. This flow identifies the route, stop, and the time of the request.
County Transit Kiosks	Transit Providers Dispatch (Public and Private)	transit traveler request	Planned	Request by a Transit traveler to summon assistance, request transit information, or request any other transit services.
County Transit Kiosks	Traveler Card-Smartcard	payment device update	Planned	Information updated concerning traveler's personal data including name, address, user account information, trip records, and profile data.
County Transit Kiosks	Traveler Card-Smartcard	request for payment	Planned	Request to deduct cost of service from user's payment account.
County Transit Kiosks	Travelers	traveler interface updates	Existing	Visual or audio information (e.g., routes, messages, guidance, emergency information) that is provided to the traveler.
County Transit Kiosks	Tribal Transit Centers	authorization request	Planned	Request to determine if a transportation user is authorized to use a particular transportation resource.
County Transit Kiosks	Tribal Transit Centers	fare collection data	Planned	Fare collection information including the summary of fare system data and financial payment transaction data.
County Transit Kiosks	YCAT Transit Passes	payment device update	Planned	Information updated concerning traveler's personal data including name, address, user account information, trip records, and profile data.
County Transit Kiosks	YCAT Transit Passes	request for payment	Planned	Request to deduct cost of service from user's payment account.
County Transit Kiosks	Yuma County Area Transit (YCAT)	authorization request	Planned	Request to determine if a transportation user is authorized to use a particular transportation resource.
County Transit Kiosks	Yuma County Area Transit (YCAT)	transit traveler request	Planned	Request by a Transit traveler to summon assistance, request transit information, or request any other transit services.
County Website and NIXLE	County Mobile App	traveler information for media	Existing	General traveler information regarding incidents, unusual traffic conditions, transit issues, or other advisory information that has been desensitized and provided to the media.
County Website and NIXLE	County TMC-TOC	fare and price information	Planned	Current transit, parking, and toll fee schedule information.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
County Website and NIXLE	County TMC-TOC	logged vehicle routes	Planned	Anticipated route information for guided vehicles, special vehicles (e.g., oversize vehicles) or groups of vehicles (e.g., governor's motorcade) that may require changes in traffic control strategy.
County Website and NIXLE	Independent School District Bus Dispatch	transit service coordination	Planned	Schedule coordination or AVL information shared between local/regional transit organizations. This includes coordination of connections and control parameters between transit properties as well as coordination of transit-related maintenance activities.
County Website and NIXLE	Local Dial-A-Ride Transit Dispatchers	transit service coordination	Planned	Schedule coordination or AVL information shared between local/regional transit organizations. This includes coordination of connections and control parameters between transit properties as well as coordination of transit-related maintenance activities.
County Website and NIXLE	NAIPTA (dba Mountain Line) Paratransit	transit service coordination	Planned	Schedule coordination or AVL information shared between local/regional transit organizations. This includes coordination of connections and control parameters between transit properties as well as coordination of transit-related maintenance activities.
County Website and NIXLE	NAIPTA (dba Mountain Line) Transit Data Archive	traveler archive data	Planned	Data associated with traveler information services including service requests, facility usage, rideshare, routing, and traveler payment transaction data. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
County Website and NIXLE	Transit Providers Dispatch (Public and Private)	transit service coordination	Planned	Schedule coordination or AVL information shared between local/regional transit organizations. This includes coordination of connections and control parameters between transit properties as well as coordination of transit-related maintenance activities.
County Website and NIXLE	Yuma County Area Transit (YCAT)	transit fare coordination	Planned	Fare and pricing information shared between local/regional transit organizations.
County Website and NIXLE	Yuma County Area Transit (YCAT)	transit service coordination	Planned	Schedule coordination or AVL information shared between local/regional transit organizations. This includes coordination of connections and control parameters between transit properties as well as coordination of transit-related maintenance activities.
County Website and NIXLE	Yuma County Area Transit (YCAT)	transit traveler information coordination	Planned	Transit schedules, real-time arrival information, fare schedules, and general transit service information shared between transit organizations to support transit traveler information systems.
County Website and NIXLE	Yuma County Area Transit (YCAT)	transit trip request	Planned	Request for a transit trip plan that is responsive to traveler requirements such as schedule, cost, or duration.
DEMA CRT - HazMat Response Team	ADOT DEOC-Dept EM Ops Center	alert notification	Existing	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
DEMA CRT - HazMat Response Team	ADOT DEOC-Dept EM Ops Center	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA CRT - HazMat Response Team	ADOT DEOC-Dept EM Ops Center	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
DEMA CRT - HazMat Response Team	ADOT DEOC-Dept EM Ops Center	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA CRT - HazMat Response Team	ADOT DEOC-Dept EM Ops Center	incident command information coordination	Existing	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DEMA CRT - HazMat Response Team	ADOT DEOC-Dept EM Ops Center	incident information	Existing	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
DEMA CRT - HazMat Response Team	ADOT DEOC-Dept EM Ops Center	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DEMA CRT - HazMat Response Team	ADOT DEOC-Dept EM Ops Center	incident response coordination	Existing	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DEMA CRT - HazMat Response Team	ADOT DEOC-Dept EM Ops Center	incident response status	Existing	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
DEMA CRT - HazMat Response Team	ADOT DEOC-Dept EM Ops Center	resource coordination	Existing	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DEMA CRT - HazMat Response Team	ADOT DEOC-Dept EM Ops Center	resource deployment status	Existing	Status of resource deployment identifying the resources (vehicles, equipment, materials, and personnel) available and their current status. General resource inventory information and specific status of deployed resources may be included.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA CRT - HazMat Response Team	ADOT DEOC-Dept EM Ops Center	resource request	Existing	A request for resources to implement special traffic control measures, assist in clean up, verify an incident, etc. The request may poll for resource availability or request pre-staging, staging, or immediate deployment of resources. Resources may be explicitly requested or a service may be requested and the specific resource deployment may be determined by the responding agency.
DEMA CRT - HazMat Response Team	ADOT ECD Dispatch	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DEMA CRT - HazMat Response Team	ADOT ECD Dispatch	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
DEMA CRT - HazMat Response Team	ADOT ECD Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA CRT - HazMat Response Team	ADOT ECD Dispatch	incident command information coordination	Existing	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DEMA CRT - HazMat Response Team	ADOT ECD Dispatch	incident information	Existing	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
DEMA CRT - HazMat Response Team	ADOT ECD Dispatch	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DEMA CRT - HazMat Response Team	ADOT ECD Dispatch	incident response status	Existing	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
DEMA CRT - HazMat Response Team	ADOT ECD Dispatch	resource coordination	Existing	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DEMA CRT - HazMat Response Team	ADOT ECD Dispatch	resource deployment status	Existing	Status of resource deployment identifying the resources (vehicles, equipment, materials, and personnel) available and their current status. General resource inventory information and specific status of deployed resources may be included.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA CRT - HazMat Response Team	ADOT ECD Dispatch	resource request	Existing	A request for resources to implement special traffic control measures, assist in clean up, verify an incident, etc. The request may poll for resource availability or request pre-staging, staging, or immediate deployment of resources. Resources may be explicitly requested or a service may be requested and the specific resource deployment may be determined by the responding agency.
DEMA CRT - HazMat Response Team	ADOT HazMat Response Team	alert notification	Existing	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
DEMA CRT - HazMat Response Team	ADOT HazMat Response Team	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DEMA CRT - HazMat Response Team	ADOT HazMat Response Team	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
DEMA CRT - HazMat Response Team	ADOT HazMat Response Team	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA CRT - HazMat Response Team	ADOT HazMat Response Team	incident command information coordination	Existing	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DEMA CRT - HazMat Response Team	ADOT HazMat Response Team	incident information	Existing	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
DEMA CRT - HazMat Response Team	ADOT HazMat Response Team	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA CRT - HazMat Response Team	ADOT HazMat Response Team	incident response coordination	Existing	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DEMA CRT - HazMat Response Team	ADOT HazMat Response Team	incident response status	Existing	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
DEMA CRT - HazMat Response Team	ADOT HazMat Response Team	resource coordination	Existing	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DEMA CRT - HazMat Response Team	ADOT HazMat Response Team	resource deployment status	Existing	Status of resource deployment identifying the resources (vehicles, equipment, materials, and personnel) available and their current status. General resource inventory information and specific status of deployed resources may be included.
DEMA CRT - HazMat Response Team	ADOT HazMat Response Team	resource request	Existing	A request for resources to implement special traffic control measures, assist in clean up, verify an incident, etc. The request may poll for resource availability or request pre-staging, staging, or immediate deployment of resources. Resources may be explicitly requested or a service may be requested and the specific resource deployment may be determined by the responding agency.
DEMA CRT - HazMat Response Team	ADOT Incident Response Unit (IRU)	incident command information coordination	Existing	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DEMA CRT - HazMat Response Team	ADOT Incident Response Unit (IRU)	incident information	Existing	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
DEMA CRT - HazMat Response Team	ADOT Regional Traffic Operations	alert notification	Existing	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA CRT - HazMat Response Team	ADOT Regional Traffic Operations	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA CRT - HazMat Response Team	ADOT Regional Traffic Operations	incident information	Existing	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
DEMA CRT - HazMat Response Team	ADOT Regional Traffic Operations	incident response status	Existing	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
DEMA CRT - HazMat Response Team	ADOT Regional Traffic Operations	resource request	Existing	A request for resources to implement special traffic control measures, assist in clean up, verify an incident, etc. The request may poll for resource availability or request pre-staging, staging, or immediate deployment of resources. Resources may be explicitly requested or a service may be requested and the specific resource deployment may be determined by the responding agency.
DEMA CRT - HazMat Response Team	ADOT TOC and EMC	alert notification	Existing	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
DEMA CRT - HazMat Response Team	ADOT TOC and EMC	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DEMA CRT - HazMat Response Team	ADOT TOC and EMC	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
DEMA CRT - HazMat Response Team	ADOT TOC and EMC	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA CRT - HazMat Response Team	ADOT TOC and EMC	incident command information coordination	Existing	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DEMA CRT - HazMat Response Team	ADOT TOC and EMC	incident information	Existing	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
DEMA CRT - HazMat Response Team	ADOT TOC and EMC	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DEMA CRT - HazMat Response Team	ADOT TOC and EMC	incident response coordination	Existing	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DEMA CRT - HazMat Response Team	ADOT TOC and EMC	incident response status	Existing	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
DEMA CRT - HazMat Response Team	ADOT TOC and EMC	resource coordination	Existing	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DEMA CRT - HazMat Response Team	ADOT TOC and EMC	resource deployment status	Existing	Status of resource deployment identifying the resources (vehicles, equipment, materials, and personnel) available and their current status. General resource inventory information and specific status of deployed resources may be included.
DEMA CRT - HazMat Response Team	ADOT TOC and EMC	resource request	Existing	A request for resources to implement special traffic control measures, assist in clean up, verify an incident, etc. The request may poll for resource availability or request pre-staging, staging, or immediate deployment of resources. Resources may be explicitly requested or a service may be requested and the specific resource deployment may be determined by the responding agency.
DEMA CRT - HazMat Response Team	County EMC-EOC	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA CRT - HazMat Response Team	County EMC-EOC	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA CRT - HazMat Response Team	County EMC-EOC	incident command information coordination	Existing	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DEMA CRT - HazMat Response Team	County EMC-EOC	incident information	Existing	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
DEMA CRT - HazMat Response Team	County EMC-EOC	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DEMA CRT - HazMat Response Team	County EMC-EOC	incident response coordination	Existing	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DEMA CRT - HazMat Response Team	County EMC-EOC	incident response status	Existing	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
DEMA CRT - HazMat Response Team	County EMC-EOC	resource coordination	Existing	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DEMA CRT - HazMat Response Team	County EMC-EOC	resource deployment status	Existing	Status of resource deployment identifying the resources (vehicles, equipment, materials, and personnel) available and their current status. General resource inventory information and specific status of deployed resources may be included.
DEMA CRT - HazMat Response Team	County EMC-EOC	resource request	Existing	A request for resources to implement special traffic control measures, assist in clean up, verify an incident, etc. The request may poll for resource availability or request pre-staging, staging, or immediate deployment of resources. Resources may be explicitly requested or a service may be requested and the specific resource deployment may be determined by the responding agency.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA CRT - HazMat Response Team	County Sheriff Dispatch	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DEMA CRT - HazMat Response Team	County Sheriff Dispatch	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
DEMA CRT - HazMat Response Team	County Sheriff Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA CRT - HazMat Response Team	County Sheriff Dispatch	incident command information coordination	Existing	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DEMA CRT - HazMat Response Team	County Sheriff Dispatch	incident information	Existing	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
DEMA CRT - HazMat Response Team	County Sheriff Dispatch	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DEMA CRT - HazMat Response Team	County Sheriff Dispatch	incident response coordination	Existing	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DEMA CRT - HazMat Response Team	County Sheriff Dispatch	incident response status	Existing	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
DEMA CRT - HazMat Response Team	County Sheriff Dispatch	resource coordination	Existing	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA CRT - HazMat Response Team	County Sheriff Dispatch	resource deployment status	Existing	Status of resource deployment identifying the resources (vehicles, equipment, materials, and personnel) available and their current status. General resource inventory information and specific status of deployed resources may be included.
DEMA CRT - HazMat Response Team	County Sheriff Dispatch	resource request	Existing	A request for resources to implement special traffic control measures, assist in clean up, verify an incident, etc. The request may poll for resource availability or request pre-staging, staging, or immediate deployment of resources. Resources may be explicitly requested or a service may be requested and the specific resource deployment may be determined by the responding agency.
DEMA CRT - HazMat Response Team	DEMA Data Archive	emergency archive data	Existing	Logged emergency information including information that characterizes identified incidents (routine highway incidents through disasters), corresponding incident response information, evacuation information, surveillance data, threat data, and resource information. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
DEMA CRT - HazMat Response Team	DEMA SEOC Arizona DEM Military Affairs	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DEMA CRT - HazMat Response Team	DEMA SEOC Arizona DEM Military Affairs	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
DEMA CRT - HazMat Response Team	DEMA SEOC Arizona DEM Military Affairs	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA CRT - HazMat Response Team	DEMA SEOC Arizona DEM Military Affairs	incident command information coordination	Existing	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DEMA CRT - HazMat Response Team	DEMA SEOC Arizona DEM Military Affairs	incident information	Existing	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
DEMA CRT - HazMat Response Team	DEMA SEOC Arizona DEM Military Affairs	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA CRT - HazMat Response Team	DEMA SEOC Arizona DEM Military Affairs	incident response coordination	Existing	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DEMA CRT - HazMat Response Team	DEMA SEOC Arizona DEM Military Affairs	resource coordination	Existing	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DEMA CRT - HazMat Response Team	DEMA SEOC Arizona DEM Military Affairs	resource deployment status	Existing	Status of resource deployment identifying the resources (vehicles, equipment, materials, and personnel) available and their current status. General resource inventory information and specific status of deployed resources may be included.
DEMA CRT - HazMat Response Team	DPS HazMat Team	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA CRT - HazMat Response Team	DPS HazMat Team	incident command information coordination	Existing	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DEMA CRT - HazMat Response Team	DPS HazMat Team	incident response coordination	Existing	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DEMA CRT - HazMat Response Team	DPS HazMat Team	resource coordination	Existing	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DEMA CRT - HazMat Response Team	DPS HazMat Team	resource deployment status	Existing	Status of resource deployment identifying the resources (vehicles, equipment, materials, and personnel) available and their current status. General resource inventory information and specific status of deployed resources may be included.
DEMA CRT - HazMat Response Team	DPS Network Operations Center - NOC	incident command information coordination	Existing	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA CRT - HazMat Response Team	Tribal Public Safety Dispatch	alert notification coordination	Planned	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DEMA CRT - HazMat Response Team	Tribal Public Safety Dispatch	alert status	Planned	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
DEMA CRT - HazMat Response Team	Tribal Public Safety Dispatch	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA CRT - HazMat Response Team	Tribal Public Safety Dispatch	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DEMA CRT - HazMat Response Team	Tribal Public Safety Dispatch	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
DEMA CRT - HazMat Response Team	Tribal Public Safety Dispatch	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DEMA CRT - HazMat Response Team	Tribal Public Safety Dispatch	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DEMA CRT - HazMat Response Team	Tribal Public Safety Dispatch	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DEMA Data Archive	ADOT Incident Response Unit (IRU)	archive status	Existing	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
DEMA Data Archive	Archive Data Users	archived data products	Existing	Raw or processed data, meta data, data catalogs and other data products provided to a user system upon request. The response may also include any associated transaction information.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA Data Archive	DEMA Data User Systems	archived data products	Existing	Raw or processed data, meta data, data catalogs and other data products provided to a user system upon request. The response may also include any associated transaction information.
DEMA Data Archive	DEMA SEOC Arizona DEM Military Affairs	archive status	Existing	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
DEMA Data Archive	DPS Central Communications Center	archive status	Planned	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
DEMA Data Archive	DPS Commercial Vehicle Enforcement	archive status	Planned	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
DEMA Data Archive	DPS Data Archive	archive coordination	Planned	Catalog data, meta data, published data, and other information exchanged between archives to support data synchronization and satisfy user data requests.
DEMA Data Archive	DPS Data User Systems	archived data products	Planned	Raw or processed data, meta data, data catalogs and other data products provided to a user system upon request. The response may also include any associated transaction information.
DEMA Data Archive	International Fuel Tax Agreement (IFTA) Clearinghouse	archive status	Planned	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
DEMA Data Archive	POE Administration Center	archive status	Planned	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
DEMA Data Archive	POE Data Archive	archive coordination	Planned	Catalog data, meta data, published data, and other information exchanged between archives to support data synchronization and satisfy user data requests.
DEMA Data Archive	POE Data User and ISP Systems	archived data products	Planned	Raw or processed data, meta data, data catalogs and other data products provided to a user system upon request. The response may also include any associated transaction information.
DEMA Data User Systems	ADOT Motor Vehicle Division (MVD) Database	archived data product requests	Planned	A user-specified request for archived data products (i.e., data, meta data, or data catalogs). The request also includes information that is used to identify and authenticate the user and support electronic payment requirements, if any.
DEMA Data User Systems	DEMA Data Archive	archived data product requests	Existing	A user-specified request for archived data products (i.e., data, meta data, or data catalogs). The request also includes information that is used to identify and authenticate the user and support electronic payment requirements, if any.
DEMA Data User Systems	DPS Data Archive	archived data product requests	Planned	A user-specified request for archived data products (i.e., data, meta data, or data catalogs). The request also includes information that is used to identify and authenticate the user and support electronic payment requirements, if any.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA Emergency Alert System	ADOT DEOC-Dept EM Ops Center	alerts and advisories	Existing	Assessments (general incident and vulnerability awareness information), advisories (identification of threats or recommendations to increase preparedness levels), and alerts (information on imminent or in-progress emergencies). This flow also provides supporting descriptive detail on incidents, threats, and vulnerabilities to increase preparedness and support effective response to threats against the surface transportation system.
DEMA Emergency Alert System	ADOT DEOC-Dept EM Ops Center	threat support data	Planned	Information provided to help receiving agency identify possible threats, including biometric image processing support data.
DEMA Emergency Alert System	ADOT ECD Dispatch	alerts and advisories	Planned	Assessments (general incident and vulnerability awareness information), advisories (identification of threats or recommendations to increase preparedness levels), and alerts (information on imminent or in-progress emergencies). This flow also provides supporting descriptive detail on incidents, threats, and vulnerabilities to increase preparedness and support effective response to threats against the surface transportation system.
DEMA Emergency Alert System	ADOT TOC and EMC	alerts and advisories	Existing	Assessments (general incident and vulnerability awareness information), advisories (identification of threats or recommendations to increase preparedness levels), and alerts (information on imminent or in-progress emergencies). This flow also provides supporting descriptive detail on incidents, threats, and vulnerabilities to increase preparedness and support effective response to threats against the surface transportation system.
DEMA Emergency Alert System	ADOT TOC and EMC	threat support data	Planned	Information provided to help receiving agency identify possible threats, including biometric image processing support data.
DEMA Emergency Alert System	CHP Dispatch	alerts and advisories	Existing	Assessments (general incident and vulnerability awareness information), advisories (identification of threats or recommendations to increase preparedness levels), and alerts (information on imminent or in-progress emergencies). This flow also provides supporting descriptive detail on incidents, threats, and vulnerabilities to increase preparedness and support effective response to threats against the surface transportation system.
DEMA Emergency Alert System	Cities and Towns Police and Fire Dispatch	alerts and advisories	Existing	Assessments (general incident and vulnerability awareness information), advisories (identification of threats or recommendations to increase preparedness levels), and alerts (information on imminent or in-progress emergencies). This flow also provides supporting descriptive detail on incidents, threats, and vulnerabilities to increase preparedness and support effective response to threats against the surface transportation system.
DEMA Emergency Alert System	County EMC-EOC	alerts and advisories	Existing	Assessments (general incident and vulnerability awareness information), advisories (identification of threats or recommendations to increase preparedness levels), and alerts (information on imminent or in-progress emergencies). Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA Emergency Alert System	Mexico Regional Maintenance Section	alerts and advisories	Planned	Assessments (general incident and vulnerability awareness information), advisories (identification of threats or recommendations to increase preparedness levels), and alerts (information on imminent or in-progress emergencies). This flow also provides supporting descriptive detail on incidents, threats, and vulnerabilities to increase preparedness and support effective response to threats against the surface transportation system.
DEMA Emergency Alert System	Mexico Regional TMC	alerts and advisories	Planned	Assessments (general incident and vulnerability awareness information), advisories (identification of threats or recommendations to increase preparedness levels), and alerts (information on imminent or in-progress emergencies). This flow also provides supporting descriptive detail on incidents, threats, and vulnerabilities to increase preparedness and support effective response to threats against the surface transportation system.
DEMA Emergency Alert System	Nevada State Police Dispatch	alerts and advisories	Planned	Assessments (general incident and vulnerability awareness information), advisories (identification of threats or recommendations to increase preparedness levels), and alerts (information on imminent or in-progress emergencies). This flow also provides supporting descriptive detail on incidents, threats, and vulnerabilities to increase preparedness and support effective response to threats against the surface transportation system.
DEMA Emergency Alert System	Tribal Public Safety Dispatch	alerts and advisories	Existing	Assessments (general incident and vulnerability awareness information), advisories (identification of threats or recommendations to increase preparedness levels), and alerts (information on imminent or in-progress emergencies). This flow also provides supporting descriptive detail on incidents, threats, and vulnerabilities to increase preparedness and support effective response to threats against the surface transportation system.
DEMA Emergency Alert System	US Border Patrol Dispatch	alerts and advisories	Existing	Assessments (general incident and vulnerability awareness information), advisories (identification of threats or recommendations to increase preparedness levels), and alerts (information on imminent or in-progress emergencies). This flow also provides supporting descriptive detail on incidents, threats, and vulnerabilities to increase preparedness and support effective response to threats against the surface transportation system.
DEMA Emergency Alert System	Utah State Police Dispatch	alerts and advisories	Planned	Assessments (general incident and vulnerability awareness information), advisories (identification of threats or recommendations to increase preparedness levels), and alerts (information on imminent or in-progress emergencies). This flow also provides supporting descriptive detail on incidents, threats, and vulnerabilities to increase preparedness and support effective response to threats against the surface transportation system.
DEMA Enforcement	ADOT DEOC-Dept EM Ops Center	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA Enforcement	ADOT DEOC-Dept EM Ops Center	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA Enforcement	ADOT DEOC-Dept EM Ops Center	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DEMA Enforcement	ADOT DEOC-Dept EM Ops Center	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DEMA Enforcement	ADOT DEOC-Dept EM Ops Center	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DEMA Enforcement	ADOT DEOC-Dept EM Ops Center	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DEMA Enforcement	ADOT DEOC-Dept EM Ops Center	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DEMA Enforcement	ADOT DEOC-Dept EM Ops Center	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DEMA Enforcement	ADOT DEOC-Dept EM Ops Center	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DEMA Enforcement	ADOT ECD CVO Administration Center	targeted list	Existing	List of carriers, drivers, and/or vehicles of interest for enforcement purposes.
DEMA Enforcement	ADOT ECD Dispatch	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DEMA Enforcement	ADOT ECD Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA Enforcement	ADOT ECD Dispatch	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DEMA Enforcement	ADOT ECD Dispatch	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DEMA Enforcement	ADOT ECD Dispatch	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DEMA Enforcement	ADOT ECD Dispatch	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DEMA Enforcement	ADOT ECD Dispatch	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DEMA Enforcement	ADOT ECD Dispatch	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DEMA Enforcement	ADOT ECD Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DEMA Enforcement	ADOT MVD Commercial Vehicle Administration	targeted list	Existing	List of carriers, drivers, and/or vehicles of interest for enforcement purposes.
DEMA Enforcement	ADOT TOC and EMC	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DEMA Enforcement	ADOT TOC and EMC	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA Enforcement	ADOT TOC and EMC	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA Enforcement	ADOT TOC and EMC	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DEMA Enforcement	ADOT TOC and EMC	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DEMA Enforcement	ADOT TOC and EMC	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DEMA Enforcement	ADOT TOC and EMC	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DEMA Enforcement	ADOT TOC and EMC	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DEMA Enforcement	ADOT TOC and EMC	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DEMA Enforcement	CHP Dispatch	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DEMA Enforcement	CHP Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA Enforcement	CHP Dispatch	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DEMA Enforcement	CHP Dispatch	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DEMA Enforcement	CHP Dispatch	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA Enforcement	CHP Dispatch	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DEMA Enforcement	CHP Dispatch	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DEMA Enforcement	CHP Dispatch	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DEMA Enforcement	CHP Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DEMA Enforcement	Cities and Towns Police and Fire Dispatch	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DEMA Enforcement	Cities and Towns Police and Fire Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA Enforcement	Cities and Towns Police and Fire Dispatch	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DEMA Enforcement	Cities and Towns Police and Fire Dispatch	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DEMA Enforcement	Cities and Towns Police and Fire Dispatch	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DEMA Enforcement	Cities and Towns Police and Fire Dispatch	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA Enforcement	Cities and Towns Police and Fire Dispatch	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DEMA Enforcement	Cities and Towns Police and Fire Dispatch	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DEMA Enforcement	Cities and Towns Police and Fire Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DEMA Enforcement	County EMC-EOC	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DEMA Enforcement	County EMC-EOC	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA Enforcement	County EMC-EOC	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DEMA Enforcement	County EMC-EOC	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DEMA Enforcement	County EMC-EOC	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DEMA Enforcement	County EMC-EOC	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DEMA Enforcement	County EMC-EOC	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DEMA Enforcement	County EMC-EOC	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA Enforcement	County EMC-EOC	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DEMA Enforcement	County Sheriff Dispatch	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DEMA Enforcement	County Sheriff Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA Enforcement	County Sheriff Dispatch	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DEMA Enforcement	County Sheriff Dispatch	incident command information coordination	Existing	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DEMA Enforcement	County Sheriff Dispatch	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DEMA Enforcement	County Sheriff Dispatch	incident response coordination	Existing	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. DEMA Enforcement	DEMA SEOC Arizona DEM Military Affairs	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DEMA Enforcement	DEMA SEOC Arizona DEM Military Affairs	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA Enforcement	DEMA SEOC Arizona DEM Military Affairs	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DEMA Enforcement	DEMA SEOC Arizona DEM Military Affairs	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DEMA Enforcement	DEMA SEOC Arizona DEM Military Affairs	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DEMA Enforcement	DEMA SEOC Arizona DEM Military Affairs	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DEMA Enforcement	DEMA SEOC Arizona DEM Military Affairs	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DEMA Enforcement	DEMA SEOC Arizona DEM Military Affairs	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DEMA Enforcement	DEMA SEOC Arizona DEM Military Affairs	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DEMA Enforcement	DPS Central Communications Center	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA Enforcement	DPS Central Communications Center	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA Enforcement	DPS Central Communications Center	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DEMA Enforcement	DPS Central Communications Center	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DEMA Enforcement	DPS Central Communications Center	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DEMA Enforcement	DPS Central Communications Center	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DEMA Enforcement	DPS Central Communications Center	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DEMA Enforcement	DPS Central Communications Center	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DEMA Enforcement	DPS Central Communications Center	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DEMA Enforcement	DPS Roadside Safety Inspection	information on violators	Existing	Information on violators provided by a law enforcement agency. May include information about commercial vehicle violations or other kinds of violations associated with the particular entity. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
DEMA Enforcement	International Fuel Tax Agreement (IFTA) Clearinghouse	targeted list	Existing	List of carriers, drivers, and/or vehicles of interest for enforcement purposes.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA Enforcement	Maricopa County EOC	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DEMA Enforcement	Maricopa County EOC	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA Enforcement	Maricopa County EOC	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DEMA Enforcement	Maricopa County EOC	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DEMA Enforcement	Maricopa County EOC	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DEMA Enforcement	Maricopa County EOC	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DEMA Enforcement	Maricopa County EOC	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DEMA Enforcement	Maricopa County EOC	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DEMA Enforcement	Maricopa County EOC	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DEMA Enforcement	Mexico Customs and Border Patrol	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA Enforcement	Mexico Customs and Border Patrol	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA Enforcement	Mexico Customs and Border Patrol	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DEMA Enforcement	Mexico Customs and Border Patrol	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DEMA Enforcement	Mexico Customs and Border Patrol	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DEMA Enforcement	Mexico Customs and Border Patrol	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DEMA Enforcement	Mexico Customs and Border Patrol	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DEMA Enforcement	Mexico Customs and Border Patrol	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DEMA Enforcement	Mexico Customs and Border Patrol	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DEMA Enforcement	Mexico Public Safety	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DEMA Enforcement	Mexico Public Safety	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA Enforcement	Mexico Public Safety	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DEMA Enforcement	Mexico Public Safety	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DEMA Enforcement	Mexico Public Safety	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DEMA Enforcement	Mexico Public Safety	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DEMA Enforcement	Mexico Public Safety	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DEMA Enforcement	Mexico Public Safety	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DEMA Enforcement	Mexico Public Safety	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DEMA Enforcement	Nevada State Police Dispatch	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DEMA Enforcement	Nevada State Police Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA Enforcement	Nevada State Police Dispatch	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA Enforcement	Nevada State Police Dispatch	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DEMA Enforcement	Nevada State Police Dispatch	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DEMA Enforcement	Nevada State Police Dispatch	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DEMA Enforcement	Nevada State Police Dispatch	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DEMA Enforcement	Nevada State Police Dispatch	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DEMA Enforcement	Nevada State Police Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DEMA Enforcement	Safety Fitness Electronic Record (SAFER)	targeted list	Existing	List of carriers, drivers, and/or vehicles of interest for enforcement purposes.
DEMA Enforcement	Tribal Public Safety Dispatch	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DEMA Enforcement	Tribal Public Safety Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA Enforcement	Tribal Public Safety Dispatch	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DEMA Enforcement	Tribal Public Safety Dispatch	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA Enforcement	Tribal Public Safety Dispatch	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DEMA Enforcement	Tribal Public Safety Dispatch	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DEMA Enforcement	Tribal Public Safety Dispatch	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DEMA Enforcement	Tribal Public Safety Dispatch	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DEMA Enforcement	Tribal Public Safety Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DEMA Enforcement	US Border Patrol Dispatch	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DEMA Enforcement	US Border Patrol Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA Enforcement	US Border Patrol Dispatch	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DEMA Enforcement	US Border Patrol Dispatch	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DEMA Enforcement	US Border Patrol Dispatch	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA Enforcement	US Border Patrol Dispatch	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DEMA Enforcement	US Border Patrol Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DEMA Enforcement	Utah State Police Dispatch	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DEMA Enforcement	Utah State Police Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA Enforcement	Utah State Police Dispatch	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DEMA Enforcement	Utah State Police Dispatch	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DEMA Enforcement	Utah State Police Dispatch	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DEMA Enforcement	Utah State Police Dispatch	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DEMA Enforcement	Utah State Police Dispatch	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DEMA Enforcement	Utah State Police Dispatch	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA Enforcement	Utah State Police Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DEMA National Guard Vehicles	DEMA SEOC Arizona DEM Military Affairs	emergency dispatch response	Existing	Request for additional emergency dispatch information and provision of en route status.
DEMA National Guard Vehicles	DEMA SEOC Arizona DEM Military Affairs	emergency vehicle tracking data	Existing	The current location and operating status of the emergency vehicle.
DEMA SEOC Arizona DEM Military Affairs	ADOT DEOC-Dept EM Ops Center	alert notification	Existing	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
DEMA SEOC Arizona DEM Military Affairs	ADOT DEOC-Dept EM Ops Center	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DEMA SEOC Arizona DEM Military Affairs	ADOT DEOC-Dept EM Ops Center	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA SEOC Arizona DEM Military Affairs	ADOT DEOC-Dept EM Ops Center	emergency traffic control request	Existing	Special request to preempt the current traffic control strategy in effect at one or more signalized intersections or highway segments, activate traffic control and closure systems such as gates and barriers, activate safeguard systems, or use driver information systems. For example, this flow can request all signals to red-flash, request a progression of traffic control preemptions along an emergency vehicle route, request a specific evacuation traffic control plan, request activation of a road closure barrier system, or place a public safety or emergency-related message on a dynamic message sign.
DEMA SEOC Arizona DEM Military Affairs	ADOT DEOC-Dept EM Ops Center	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DEMA SEOC Arizona DEM Military Affairs	ADOT DEOC-Dept EM Ops Center	evacuation information	Existing	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
DEMA SEOC Arizona DEM Military Affairs	ADOT DEOC-Dept EM Ops Center	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA SEOC Arizona DEM Military Affairs	ADOT DEOC-Dept EM Ops Center	incident information	Existing	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
DEMA SEOC Arizona DEM Military Affairs	ADOT DEOC-Dept EM Ops Center	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DEMA SEOC Arizona DEM Military Affairs	ADOT DEOC-Dept EM Ops Center	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DEMA SEOC Arizona DEM Military Affairs	ADOT DEOC-Dept EM Ops Center	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
DEMA SEOC Arizona DEM Military Affairs	ADOT DEOC-Dept EM Ops Center	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DEMA SEOC Arizona DEM Military Affairs	ADOT DEOC-Dept EM Ops Center	resource request	Planned	A request for resources to implement special traffic control measures, assist in clean up, verify an incident, etc. The request may poll for resource availability or request pre-staging, staging, or immediate deployment of resources. Resources may be explicitly requested or a service may be requested and the specific resource deployment may be determined by the responding agency.
DEMA SEOC Arizona DEM Military Affairs	ADOT DEOC-Dept EM Ops Center	threat information	Existing	Threats regarding transportation infrastructure, facilities, or systems detected by a variety of methods (sensors, surveillance, threat analysis of advisories from outside agencies, etc.
DEMA SEOC Arizona DEM Military Affairs	ADOT DEOC-Dept EM Ops Center	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DEMA SEOC Arizona DEM Military Affairs	ADOT DEOC-Dept EM Ops Center	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DEMA SEOC Arizona DEM Military Affairs	ADOT ECD Dispatch	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA SEOC Arizona DEM Military Affairs	ADOT ECD Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA SEOC Arizona DEM Military Affairs	ADOT ECD Dispatch	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DEMA SEOC Arizona DEM Military Affairs	ADOT ECD Dispatch	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DEMA SEOC Arizona DEM Military Affairs	ADOT ECD Dispatch	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DEMA SEOC Arizona DEM Military Affairs	ADOT ECD Dispatch	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DEMA SEOC Arizona DEM Military Affairs	ADOT ECD Dispatch	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DEMA SEOC Arizona DEM Military Affairs	ADOT ECD Dispatch	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DEMA SEOC Arizona DEM Military Affairs	ADOT ECD Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DEMA SEOC Arizona DEM Military Affairs	ADOT Motor Vehicle Division (MVD) Database	emergency archive data	Planned	Logged emergency information including information that characterizes identified incidents (routine highway incidents through disasters), corresponding incident response information, evacuation information, surveillance data, threat data, and resource information. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA SEOC Arizona DEM Military Affairs	ADOT TOC and EMC	alert notification	Existing	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
DEMA SEOC Arizona DEM Military Affairs	ADOT TOC and EMC	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DEMA SEOC Arizona DEM Military Affairs	ADOT TOC and EMC	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA SEOC Arizona DEM Military Affairs	ADOT TOC and EMC	emergency traffic control request	Existing	Special request to preempt the current traffic control strategy in effect at one or more signalized intersections or highway segments, activate traffic control and closure systems such as gates and barriers, activate safeguard systems, or use driver information systems. For example, this flow can request all signals to red-flash, request a progression of traffic control preemptions along an emergency vehicle route, request a specific evacuation traffic control plan, request activation of a road closure barrier system, or place a public safety or emergency-related message on a dynamic message sign.

In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DEMA SEOC Arizona DEM Military Affairs	CHP Dispatch	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DEMA SEOC Arizona DEM Military Affairs	CHP Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA SEOC Arizona DEM Military Affairs	CHP Dispatch	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA SEOC Arizona DEM Military Affairs	CHP Dispatch	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DEMA SEOC Arizona DEM Military Affairs	CHP Dispatch	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DEMA SEOC Arizona DEM Military Affairs	CHP Dispatch	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DEMA SEOC Arizona DEM Military Affairs	CHP Dispatch	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DEMA SEOC Arizona DEM Military Affairs	CHP Dispatch	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DEMA SEOC Arizona DEM Military Affairs	CHP Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DEMA SEOC Arizona DEM Military Affairs	Cities and Towns Police and Fire Dispatch	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DEMA SEOC Arizona DEM Military Affairs	Cities and Towns Police and Fire Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA SEOC Arizona DEM Military Affairs	Cities and Towns Police and Fire Dispatch	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DEMA SEOC Arizona DEM Military Affairs	Cities and Towns Police and Fire Dispatch	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DEMA SEOC Arizona DEM Military Affairs	Cities and Towns Police and Fire Dispatch	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA SEOC Arizona DEM Military Affairs	Cities and Towns Police and Fire Dispatch	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DEMA SEOC Arizona DEM Military Affairs	Cities and Towns Police and Fire Dispatch	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DEMA SEOC Arizona DEM Military Affairs	Cities and Towns Police and Fire Dispatch	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DEMA SEOC Arizona DEM Military Affairs	Cities and Towns Police and Fire Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DEMA SEOC Arizona DEM Military Affairs	Cities and Towns TMC-TOC	alert notification	Planned	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
DEMA SEOC Arizona DEM Military Affairs	Cities and Towns TMC-TOC	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA SEOC Arizona DEM Military Affairs	Cities and Towns TMC-TOC	emergency traffic control request	Planned	Special request to preempt the current traffic control strategy in effect at one or more signalized intersections or highway segments, activate traffic control and closure systems such as gates and barriers, activate safeguard systems, or use driver information systems. For example, this flow can request all signals to red-flash, request a progression of traffic control preemptions along an emergency vehicle route, request a specific evacuation traffic control plan, request activation of a road closure barrier system, or place a public safety or emergency-related message on a dynamic message sign.
DEMA SEOC Arizona DEM Military Affairs	Cities and Towns TMC-TOC	evacuation information	Planned	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA SEOC Arizona DEM Military Affairs	Cities and Towns TMC-TOC	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
DEMA SEOC Arizona DEM Military Affairs	Cities and Towns TMC-TOC	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
DEMA SEOC Arizona DEM Military Affairs	Cities and Towns TMC-TOC	resource request	Planned	A request for resources to implement special traffic control measures, assist in clean up, verify an incident, etc. The request may poll for resource availability or request pre-staging, staging, or immediate deployment of resources. Resources may be explicitly requested or a service may be requested and the specific resource deployment may be determined by the responding agency.
DEMA SEOC Arizona DEM Military Affairs	Cities and Towns TMC-TOC	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DEMA SEOC Arizona DEM Military Affairs	County 911 PSAPs	incident information for public	Existing	Report of current desensitized incident information prepared for public dissemination.
DEMA SEOC Arizona DEM Military Affairs	County EMC-EOC	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DEMA SEOC Arizona DEM Military Affairs	County EMC-EOC	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA SEOC Arizona DEM Military Affairs	County EMC-EOC	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DEMA SEOC Arizona DEM Military Affairs	County EMC-EOC	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DEMA SEOC Arizona DEM Military Affairs	County EMC-EOC	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA SEOC Arizona DEM Military Affairs	County EMC-EOC	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DEMA SEOC Arizona DEM Military Affairs	County EMC-EOC	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DEMA SEOC Arizona DEM Military Affairs	County EMC-EOC	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DEMA SEOC Arizona DEM Military Affairs	County EMC-EOC	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DEMA SEOC Arizona DEM Military Affairs	County Sheriff Dispatch	alert notification coordination	Planned	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DEMA SEOC Arizona DEM Military Affairs	County Sheriff Dispatch	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA SEOC Arizona DEM Military Affairs	County Sheriff Dispatch	evacuation coordination	Planned	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DEMA SEOC Arizona DEM Military Affairs	County Sheriff Dispatch	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DEMA SEOC Arizona DEM Military Affairs	County Sheriff Dispatch	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DEMA SEOC Arizona DEM Military Affairs	County Sheriff Dispatch	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA SEOC Arizona DEM Military Affairs	County Sheriff Dispatch	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DEMA SEOC Arizona DEM Military Affairs	County Sheriff Dispatch	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DEMA SEOC Arizona DEM Military Affairs	County Sheriff Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DEMA SEOC Arizona DEM Military Affairs	DEMA CRT - HazMat Response Team	alert notification	Existing	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
DEMA SEOC Arizona DEM Military Affairs	DEMA CRT - HazMat Response Team	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DEMA SEOC Arizona DEM Military Affairs	DEMA CRT - HazMat Response Team	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA SEOC Arizona DEM Military Affairs	DEMA CRT - HazMat Response Team	incident command information coordination	Existing	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DEMA SEOC Arizona DEM Military Affairs	DEMA CRT - HazMat Response Team	incident information	Existing	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
DEMA SEOC Arizona DEM Military Affairs	DEMA CRT - HazMat Response Team	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA SEOC Arizona DEM Military Affairs	DEMA CRT - HazMat Response Team	incident response coordination	Existing	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DEMA SEOC Arizona DEM Military Affairs	DEMA CRT - HazMat Response Team	incident response status	Existing	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
DEMA SEOC Arizona DEM Military Affairs	DEMA CRT - HazMat Response Team	resource coordination	Existing	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DEMA SEOC Arizona DEM Military Affairs	DEMA CRT - HazMat Response Team	resource request	Existing	A request for resources to implement special traffic control measures, assist in clean up, verify an incident, etc. The request may poll for resource availability or request pre-staging, staging, or immediate deployment of resources. Resources may be explicitly requested or a service may be requested and the specific resource deployment may be determined by the responding agency.
DEMA SEOC Arizona DEM Military Affairs	DEMA Data Archive	emergency archive data	Existing	Logged emergency information including information that characterizes identified incidents (routine highway incidents through disasters), corresponding incident response information, evacuation information, surveillance data, threat data, and resource information. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
DEMA SEOC Arizona DEM Military Affairs	DEMA Enforcement	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DEMA SEOC Arizona DEM Military Affairs	DEMA Enforcement	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA SEOC Arizona DEM Military Affairs	DEMA Enforcement	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DEMA SEOC Arizona DEM Military Affairs	DEMA Enforcement	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DEMA SEOC Arizona DEM Military Affairs	DEMA Enforcement	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA SEOC Arizona DEM Military Affairs	DEMA Enforcement	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DEMA SEOC Arizona DEM Military Affairs	DEMA Enforcement	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DEMA SEOC Arizona DEM Military Affairs	DEMA Enforcement	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DEMA SEOC Arizona DEM Military Affairs	DEMA Enforcement	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DEMA SEOC Arizona DEM Military Affairs	DEMA National Guard Vehicles	emergency dispatch requests	Existing	Emergency vehicle dispatch instructions including incident location and available information concerning the incident.
DEMA SEOC Arizona DEM Military Affairs	DEMA WebEOC System	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DEMA SEOC Arizona DEM Military Affairs	DEMA WebEOC System	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA SEOC Arizona DEM Military Affairs	DEMA WebEOC System	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DEMA SEOC Arizona DEM Military Affairs	DEMA WebEOC System	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DEMA SEOC Arizona DEM Military Affairs	DEMA WebEOC System	incident information for public	Existing	Report of current desensitized incident information prepared for public dissemination.
DEMA SEOC Arizona DEM Military Affairs	DEMA WebEOC System	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA SEOC Arizona DEM Military Affairs	DEMA WebEOC System	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DEMA SEOC Arizona DEM Military Affairs	DEMA WebEOC System	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DEMA SEOC Arizona DEM Military Affairs	DEMA WebEOC System	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DEMA SEOC Arizona DEM Military Affairs	DEMA WebEOC System	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DEMA SEOC Arizona DEM Military Affairs	DPS Central Communications Center	alert notification	Existing	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
DEMA SEOC Arizona DEM Military Affairs	DPS Central Communications Center	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DEMA SEOC Arizona DEM Military Affairs	DPS Central Communications Center	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA SEOC Arizona DEM Military Affairs	DPS Central Communications Center	emergency traffic control request	Existing	Special request to preempt the current traffic control strategy in effect at one or more signalized intersections or highway segments, activate traffic control and closure systems such as gates and barriers, activate safeguard systems, or use driver information systems. For example, this flow can request all signals to red-flash, request a progression of traffic control preemptions along an emergency vehicle route, request a specific evacuation traffic control plan, request activation of a road closure barrier system, or place a public safety or emergency-related message on a dynamic message sign.
DEMA SEOC Arizona DEM Military Affairs	DPS Central Communications Center	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA SEOC Arizona DEM Military Affairs	DPS Central Communications Center	evacuation information	Existing	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
DEMA SEOC Arizona DEM Military Affairs	DPS Central Communications Center	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DEMA SEOC Arizona DEM Military Affairs	DPS Central Communications Center	incident information	Existing	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
DEMA SEOC Arizona DEM Military Affairs	DPS Central Communications Center	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DEMA SEOC Arizona DEM Military Affairs	DPS Central Communications Center	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DEMA SEOC Arizona DEM Military Affairs	DPS Central Communications Center	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
DEMA SEOC Arizona DEM Military Affairs	DPS Central Communications Center	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DEMA SEOC Arizona DEM Military Affairs	DPS Central Communications Center	resource request	Planned	A request for resources to implement special traffic control measures, assist in clean up, verify an incident, etc. The request may poll for resource availability or request pre-staging, staging, or immediate deployment of resources. Resources may be explicitly requested or a service may be requested and the specific resource deployment may be determined by the responding agency.
DEMA SEOC Arizona DEM Military Affairs	DPS Central Communications Center	threat information	Existing	Threats regarding transportation infrastructure, facilities, or systems detected by a variety of methods (sensors, surveillance, threat analysis of advisories from outside agencies, etc.
DEMA SEOC Arizona DEM Military Affairs	DPS Central Communications Center	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA SEOC Arizona DEM Military Affairs	DPS Central Communications Center	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DEMA SEOC Arizona DEM Military Affairs	DPS Console Interface (Other LE)	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DEMA SEOC Arizona DEM Military Affairs	DPS Console Interface (Other LE)	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA SEOC Arizona DEM Military Affairs	DPS Console Interface (Other LE)	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DEMA SEOC Arizona DEM Military Affairs	DPS Console Interface (Other LE)	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DEMA SEOC Arizona DEM Military Affairs	DPS Console Interface (Other LE)	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DEMA SEOC Arizona DEM Military Affairs	DPS Console Interface (Other LE)	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DEMA SEOC Arizona DEM Military Affairs	DPS Console Interface (Other LE)	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DEMA SEOC Arizona DEM Military Affairs	DPS Console Interface (Other LE)	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DEMA SEOC Arizona DEM Military Affairs	DPS Console Interface (Other LE)	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA SEOC Arizona DEM Military Affairs	Independent School District Bus Dispatch	alert notification	Existing	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
DEMA SEOC Arizona DEM Military Affairs	Independent School District Bus Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA SEOC Arizona DEM Military Affairs	Independent School District Bus Dispatch	emergency transit service request	Existing	Request to modify transit service and fare schedules to address emergencies, including requests for transit services to evacuate people from and/or deploy response agency personnel to an emergency scene. The request may poll for resource availability or request pre-staging, staging, or immediate dispatch of transit resources.
DEMA SEOC Arizona DEM Military Affairs	Independent School District Bus Dispatch	evacuation information	Existing	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
DEMA SEOC Arizona DEM Military Affairs	Independent School District Bus Dispatch	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
DEMA SEOC Arizona DEM Military Affairs	Independent School District Bus Dispatch	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
DEMA SEOC Arizona DEM Military Affairs	Independent School District Bus Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DEMA SEOC Arizona DEM Military Affairs	Local Dial-A-Ride Transit Dispatchers	alert notification	Existing	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA SEOC Arizona DEM Military Affairs	Local Dial-A-Ride Transit Dispatchers	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA SEOC Arizona DEM Military Affairs	Local Dial-A-Ride Transit Dispatchers	emergency transit service request	Existing	Request to modify transit service and fare schedules to address emergencies, including requests for transit services to evacuate people from and/or deploy response agency personnel to an emergency scene. The request may poll for resource availability or request pre-staging, staging, or immediate dispatch of transit resources.
DEMA SEOC Arizona DEM Military Affairs	Local Dial-A-Ride Transit Dispatchers	evacuation information	Existing	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
DEMA SEOC Arizona DEM Military Affairs	Local Dial-A-Ride Transit Dispatchers	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
DEMA SEOC Arizona DEM Military Affairs	Local Dial-A-Ride Transit Dispatchers	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
DEMA SEOC Arizona DEM Military Affairs	Local Dial-A-Ride Transit Dispatchers	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DEMA SEOC Arizona DEM Military Affairs	Local Print and Broadcast Media	incident information for media	Existing	Report of current desensitized incident information prepared for public dissemination through the media.
DEMA SEOC Arizona DEM Military Affairs	Maricopa County EOC	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DEMA SEOC Arizona DEM Military Affairs	Maricopa County EOC	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA SEOC Arizona DEM Military Affairs	Maricopa County EOC	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA SEOC Arizona DEM Military Affairs	Maricopa County EOC	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DEMA SEOC Arizona DEM Military Affairs	Maricopa County EOC	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DEMA SEOC Arizona DEM Military Affairs	Maricopa County EOC	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DEMA SEOC Arizona DEM Military Affairs	Maricopa County EOC	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DEMA SEOC Arizona DEM Military Affairs	Maricopa County EOC	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DEMA SEOC Arizona DEM Military Affairs	Maricopa County EOC	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DEMA SEOC Arizona DEM Military Affairs	Mexico Customs and Border Patrol	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DEMA SEOC Arizona DEM Military Affairs	Mexico Customs and Border Patrol	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA SEOC Arizona DEM Military Affairs	Mexico Customs and Border Patrol	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DEMA SEOC Arizona DEM Military Affairs	Mexico Customs and Border Patrol	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DEMA SEOC Arizona DEM Military Affairs	Mexico Customs and Border Patrol	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA SEOC Arizona DEM Military Affairs	Mexico Customs and Border Patrol	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DEMA SEOC Arizona DEM Military Affairs	Mexico Customs and Border Patrol	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DEMA SEOC Arizona DEM Military Affairs	Mexico Customs and Border Patrol	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DEMA SEOC Arizona DEM Military Affairs	Mexico Customs and Border Patrol	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DEMA SEOC Arizona DEM Military Affairs	Mexico Public Safety	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DEMA SEOC Arizona DEM Military Affairs	Mexico Public Safety	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA SEOC Arizona DEM Military Affairs	Mexico Public Safety	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DEMA SEOC Arizona DEM Military Affairs	Mexico Public Safety	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DEMA SEOC Arizona DEM Military Affairs	Mexico Public Safety	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DEMA SEOC Arizona DEM Military Affairs	Mexico Public Safety	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA SEOC Arizona DEM Military Affairs	Mexico Public Safety	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DEMA SEOC Arizona DEM Military Affairs	Mexico Public Safety	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DEMA SEOC Arizona DEM Military Affairs	Mexico Public Safety	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DEMA SEOC Arizona DEM Military Affairs	Mexico Regional Maintenance Section	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA SEOC Arizona DEM Military Affairs	Mexico Regional Maintenance Section	evacuation information	Planned	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
DEMA SEOC Arizona DEM Military Affairs	Mexico Regional Maintenance Section	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
DEMA SEOC Arizona DEM Military Affairs	Mexico Regional Maintenance Section	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
DEMA SEOC Arizona DEM Military Affairs	Mexico Regional Maintenance Section	maint and constr resource request	Planned	Request for road maintenance and construction resources that can be used in the diversion of traffic (cones, portable signs), clearance of a road hazard, repair of ancillary damage, or any other incident response. The request may poll for resource availability or request pre-staging, staging, or immediate dispatch of resources.
DEMA SEOC Arizona DEM Military Affairs	Mexico Regional Maintenance Section	threat information	Planned	Threats regarding transportation infrastructure, facilities, or systems detected by a variety of methods (sensors, surveillance, threat analysis of advisories from outside agencies, etc.
DEMA SEOC Arizona DEM Military Affairs	Mexico Regional Maintenance Section	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA SEOC Arizona DEM Military Affairs	Mexico Regional TMC	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA SEOC Arizona DEM Military Affairs	Mexico Regional TMC	emergency traffic control request	Existing	Special request to preempt the current traffic control strategy in effect at one or more signalized intersections or highway segments, activate traffic control and closure systems such as gates and barriers, activate safeguard systems, or use driver information systems. For example, this flow can request all signals to red-flash, request a progression of traffic control preemptions along an emergency vehicle route, request a specific evacuation traffic control plan, request activation of a road closure barrier system, or place a public safety or emergency-related message on a dynamic message sign.
DEMA SEOC Arizona DEM Military Affairs	Mexico Regional TMC	evacuation information	Existing	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
DEMA SEOC Arizona DEM Military Affairs	Mexico Regional TMC	incident information	Existing	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
DEMA SEOC Arizona DEM Military Affairs	Mexico Regional TMC	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
DEMA SEOC Arizona DEM Military Affairs	Mexico Regional TMC	resource request	Planned	A request for resources to implement special traffic control measures, assist in clean up, verify an incident, etc. The request may poll for resource availability or request pre-staging, staging, or immediate deployment of resources. Resources may be explicitly requested or a service may be requested and the specific resource deployment may be determined by the responding agency.
DEMA SEOC Arizona DEM Military Affairs	Mexico Regional TMC	threat information	Existing	Threats regarding transportation infrastructure, facilities, or systems detected by a variety of methods (sensors, surveillance, threat analysis of advisories from outside agencies, etc.
DEMA SEOC Arizona DEM Military Affairs	Mexico Regional TMC	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA SEOC Arizona DEM Military Affairs	NAIPTA (dba Mountain Line) Paratransit	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA SEOC Arizona DEM Military Affairs	NAIPTA (dba Mountain Line) Paratransit	emergency transit service request	Existing	Request to modify transit service and fare schedules to address emergencies, including requests for transit services to evacuate people from and/or deploy response agency personnel to an emergency scene. The request may poll for resource availability or request pre-staging, staging, or immediate dispatch of transit resources.
DEMA SEOC Arizona DEM Military Affairs	NAIPTA (dba Mountain Line) Paratransit	evacuation information	Existing	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
DEMA SEOC Arizona DEM Military Affairs	NAIPTA (dba Mountain Line) Paratransit	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
DEMA SEOC Arizona DEM Military Affairs	NAIPTA (dba Mountain Line) Paratransit	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
DEMA SEOC Arizona DEM Military Affairs	NAIPTA (dba Mountain Line) Paratransit	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DEMA SEOC Arizona DEM Military Affairs	Nevada State Police Dispatch	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DEMA SEOC Arizona DEM Military Affairs	Nevada State Police Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA SEOC Arizona DEM Military Affairs	Nevada State Police Dispatch	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA SEOC Arizona DEM Military Affairs	Nevada State Police Dispatch	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DEMA SEOC Arizona DEM Military Affairs	Nevada State Police Dispatch	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DEMA SEOC Arizona DEM Military Affairs	Nevada State Police Dispatch	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DEMA SEOC Arizona DEM Military Affairs	Nevada State Police Dispatch	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DEMA SEOC Arizona DEM Military Affairs	Nevada State Police Dispatch	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DEMA SEOC Arizona DEM Military Affairs	Nevada State Police Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DEMA SEOC Arizona DEM Military Affairs	New Mexico State Police Dispatch	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DEMA SEOC Arizona DEM Military Affairs	New Mexico State Police Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA SEOC Arizona DEM Military Affairs	New Mexico State Police Dispatch	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DEMA SEOC Arizona DEM Military Affairs	New Mexico State Police Dispatch	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DEMA SEOC Arizona DEM Military Affairs	New Mexico State Police Dispatch	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA SEOC Arizona DEM Military Affairs	New Mexico State Police Dispatch	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DEMA SEOC Arizona DEM Military Affairs	New Mexico State Police Dispatch	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DEMA SEOC Arizona DEM Military Affairs	New Mexico State Police Dispatch	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DEMA SEOC Arizona DEM Military Affairs	New Mexico State Police Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DEMA SEOC Arizona DEM Military Affairs	POE Data Archive	emergency archive data	Planned	Logged emergency information including information that characterizes identified incidents (routine highway incidents through disasters), corresponding incident response information, evacuation information, surveillance data, threat data, and resource information. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
DEMA SEOC Arizona DEM Military Affairs	Railroad Operations Center	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA SEOC Arizona DEM Military Affairs	Railroad Operations Center	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA SEOC Arizona DEM Military Affairs	Social Media and Networking	alert notification for social media	Planned	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public via social media. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This version of the flow contains only publicly available information and is structured and formatted for publication on specific social media platforms and other public-facing sites.
DEMA SEOC Arizona DEM Military Affairs	Transit Providers Dispatch (Public and Private)	alert notification	Existing	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
DEMA SEOC Arizona DEM Military Affairs	Transit Providers Dispatch (Public and Private)	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA SEOC Arizona DEM Military Affairs	Transit Providers Dispatch (Public and Private)	emergency transit service request	Existing	Request to modify transit service and fare schedules to address emergencies, including requests for transit services to evacuate people from and/or deploy response agency personnel to an emergency scene. The request may poll for resource availability or request pre-staging, staging, or immediate dispatch of transit resources.
DEMA SEOC Arizona DEM Military Affairs	Transit Providers Dispatch (Public and Private)	evacuation information	Existing	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
DEMA SEOC Arizona DEM Military Affairs	Transit Providers Dispatch (Public and Private)	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
DEMA SEOC Arizona DEM Military Affairs	Transit Providers Dispatch (Public and Private)	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
DEMA SEOC Arizona DEM Military Affairs	Transit Providers Dispatch (Public and Private)	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA SEOC Arizona DEM Military Affairs	Tribal MCO Dispatch	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA SEOC Arizona DEM Military Affairs	Tribal MCO Dispatch	evacuation information	Existing	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
DEMA SEOC Arizona DEM Military Affairs	Tribal MCO Dispatch	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
DEMA SEOC Arizona DEM Military Affairs	Tribal MCO Dispatch	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
DEMA SEOC Arizona DEM Military Affairs	Tribal MCO Dispatch	maint and constr resource request	Planned	Request for road maintenance and construction resources that can be used in the diversion of traffic (cones, portable signs), clearance of a road hazard, repair of ancillary damage, or any other incident response. The request may poll for resource availability or request pre-staging, staging, or immediate dispatch of resources.
DEMA SEOC Arizona DEM Military Affairs	Tribal MCO Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DEMA SEOC Arizona DEM Military Affairs	Tribal Public Safety Dispatch	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DEMA SEOC Arizona DEM Military Affairs	Tribal Public Safety Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA SEOC Arizona DEM Military Affairs	Tribal Public Safety Dispatch	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA SEOC Arizona DEM Military Affairs	Tribal Public Safety Dispatch	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DEMA SEOC Arizona DEM Military Affairs	Tribal Public Safety Dispatch	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DEMA SEOC Arizona DEM Military Affairs	Tribal Public Safety Dispatch	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DEMA SEOC Arizona DEM Military Affairs	Tribal Public Safety Dispatch	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DEMA SEOC Arizona DEM Military Affairs	Tribal Public Safety Dispatch	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DEMA SEOC Arizona DEM Military Affairs	Tribal Public Safety Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DEMA SEOC Arizona DEM Military Affairs	Tribal TMC-TOC-TIC	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA SEOC Arizona DEM Military Affairs	Tribal TMC-TOC-TIC	emergency traffic control request	Planned	Special request to preempt the current traffic control strategy in effect at one or more signalized intersections or highway segments, activate traffic control and closure systems such as gates and barriers, activate safeguard systems, or use driver information systems. For example, this flow can request all signals to red-flash, request a progression of traffic control preemptions along an emergency vehicle route, request a specific evacuation traffic control plan, request activation of a road closure barrier system, or place a public safety or emergency-related message on a dynamic message sign.
DEMA SEOC Arizona DEM Military Affairs	Tribal TMC-TOC-TIC	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA SEOC Arizona DEM Military Affairs	Tribal TMC-TOC-TIC	resource request	Planned	A request for resources to implement special traffic control measures, assist in clean up, verify an incident, etc. The request may poll for resource availability or request pre-staging, staging, or immediate deployment of resources. Resources may be explicitly requested or a service may be requested and the specific resource deployment may be determined by the responding agency.
DEMA SEOC Arizona DEM Military Affairs	Tribal Transit Centers	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA SEOC Arizona DEM Military Affairs	Tribal Transit Centers	emergency transit service request	Planned	Request to modify transit service and fare schedules to address emergencies, including requests for transit services to evacuate people from and/or deploy response agency personnel to an emergency scene. The request may poll for resource availability or request pre-staging, staging, or immediate dispatch of transit resources.
DEMA SEOC Arizona DEM Military Affairs	Tribal Transit Centers	evacuation information	Planned	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
DEMA SEOC Arizona DEM Military Affairs	Tribal Transit Centers	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
DEMA SEOC Arizona DEM Military Affairs	Tribal Transit Centers	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
DEMA SEOC Arizona DEM Military Affairs	Tribal Transit Centers	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DEMA SEOC Arizona DEM Military Affairs	US Border Patrol Dispatch	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DEMA SEOC Arizona DEM Military Affairs	US Border Patrol Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA SEOC Arizona DEM Military Affairs	US Border Patrol Dispatch	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DEMA SEOC Arizona DEM Military Affairs	US Border Patrol Dispatch	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DEMA SEOC Arizona DEM Military Affairs	US Border Patrol Dispatch	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DEMA SEOC Arizona DEM Military Affairs	US Border Patrol Dispatch	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DEMA SEOC Arizona DEM Military Affairs	US Border Patrol Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DEMA SEOC Arizona DEM Military Affairs	Utah State Police Dispatch	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DEMA SEOC Arizona DEM Military Affairs	Utah State Police Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA SEOC Arizona DEM Military Affairs	Utah State Police Dispatch	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DEMA SEOC Arizona DEM Military Affairs	Utah State Police Dispatch	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DEMA SEOC Arizona DEM Military Affairs	Utah State Police Dispatch	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA SEOC Arizona DEM Military Affairs	Utah State Police Dispatch	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DEMA SEOC Arizona DEM Military Affairs	Utah State Police Dispatch	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DEMA SEOC Arizona DEM Military Affairs	Utah State Police Dispatch	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DEMA SEOC Arizona DEM Military Affairs	Utah State Police Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DEMA SEOC Arizona DEM Military Affairs	Yuma County Area Transit (YCAT)	alert notification	Existing	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
DEMA SEOC Arizona DEM Military Affairs	Yuma County Area Transit (YCAT)	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DEMA SEOC Arizona DEM Military Affairs	Yuma County Area Transit (YCAT)	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA SEOC Arizona DEM Military Affairs	Yuma County Area Transit (YCAT)	emergency transit service request	Existing	Request to modify transit service and fare schedules to address emergencies, including requests for transit services to evacuate people from and/or deploy response agency personnel to an emergency scene. The request may poll for resource availability or request pre-staging, staging, or immediate dispatch of transit resources.
DEMA SEOC Arizona DEM Military Affairs	Yuma County Area Transit (YCAT)	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DEMA SEOC Arizona DEM Military Affairs	Yuma County Area Transit (YCAT)	evacuation information	Existing	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA SEOC Arizona DEM Military Affairs	Yuma County Area Transit (YCAT)	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DEMA SEOC Arizona DEM Military Affairs	Yuma County Area Transit (YCAT)	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
DEMA SEOC Arizona DEM Military Affairs	Yuma County Area Transit (YCAT)	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DEMA SEOC Arizona DEM Military Affairs	Yuma County Area Transit (YCAT)	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
DEMA SEOC Arizona DEM Military Affairs	Yuma County Area Transit (YCAT)	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DEMA SEOC Arizona DEM Military Affairs	Yuma County Area Transit (YCAT)	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DEMA WebEOC System	ADOT DEOC-Dept EM Ops Center	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DEMA WebEOC System	ADOT DEOC-Dept EM Ops Center	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA WebEOC System	ADOT DEOC-Dept EM Ops Center	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DEMA WebEOC System	ADOT DEOC-Dept EM Ops Center	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DEMA WebEOC System	ADOT DEOC-Dept EM Ops Center	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DEMA WebEOC System	ADOT DEOC-Dept EM Ops Center	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DEMA WebEOC System	ADOT DEOC-Dept EM Ops Center	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DEMA WebEOC System	ADOT DEOC-Dept EM Ops Center	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DEMA WebEOC System	ADOT DEOC-Dept EM Ops Center	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DEMA WebEOC System	ADOT ECD Dispatch	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DEMA WebEOC System	ADOT ECD Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA WebEOC System	ADOT ECD Dispatch	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA WebEOC System	ADOT ECD Dispatch	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DEMA WebEOC System	ADOT ECD Dispatch	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DEMA WebEOC System	ADOT ECD Dispatch	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. DEMA WebEOC System	Mexico Customs and Border Patrol	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DEMA WebEOC System	Mexico Customs and Border Patrol	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DEMA WebEOC System	Mexico Public Safety	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DEMA WebEOC System	Mexico Public Safety	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA WebEOC System	Mexico Public Safety	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DEMA WebEOC System	Mexico Public Safety	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DEMA WebEOC System	Mexico Public Safety	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DEMA WebEOC System	Mexico Public Safety	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA WebEOC System	Mexico Public Safety	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DEMA WebEOC System	Mexico Public Safety	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DEMA WebEOC System	Mexico Public Safety	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DEMA WebEOC System	Nevada State Police Dispatch	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DEMA WebEOC System	Nevada State Police Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA WebEOC System	Nevada State Police Dispatch	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DEMA WebEOC System	Nevada State Police Dispatch	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DEMA WebEOC System	Nevada State Police Dispatch	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DEMA WebEOC System	Nevada State Police Dispatch	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DEMA WebEOC System	Nevada State Police Dispatch	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DEMA WebEOC System	Nevada State Police Dispatch	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA WebEOC System	Nevada State Police Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DEMA WebEOC System	New Mexico State Police Dispatch	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DEMA WebEOC System	New Mexico State Police Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA WebEOC System	New Mexico State Police Dispatch	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DEMA WebEOC System	New Mexico State Police Dispatch	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DEMA WebEOC System	New Mexico State Police Dispatch	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DEMA WebEOC System	New Mexico State Police Dispatch	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DEMA WebEOC System	New Mexico State Police Dispatch	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DEMA WebEOC System	New Mexico State Police Dispatch	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DEMA WebEOC System	New Mexico State Police Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA WebEOC System	Tribal Public Safety Dispatch	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DEMA WebEOC System	Tribal Public Safety Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA WebEOC System	Tribal Public Safety Dispatch	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DEMA WebEOC System	Tribal Public Safety Dispatch	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DEMA WebEOC System	Tribal Public Safety Dispatch	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DEMA WebEOC System	Tribal Public Safety Dispatch	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DEMA WebEOC System	Tribal Public Safety Dispatch	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DEMA WebEOC System	Tribal Public Safety Dispatch	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DEMA WebEOC System	Tribal Public Safety Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DEMA WebEOC System	US Border Patrol Dispatch	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA WebEOC System	US Border Patrol Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA WebEOC System	US Border Patrol Dispatch	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DEMA WebEOC System	US Border Patrol Dispatch	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DEMA WebEOC System	US Border Patrol Dispatch	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DEMA WebEOC System	US Border Patrol Dispatch	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DEMA WebEOC System	US Border Patrol Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DEMA WebEOC System	Utah State Police Dispatch	alert notification coordination	Planned	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DEMA WebEOC System	Utah State Police Dispatch	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DEMA WebEOC System	Utah State Police Dispatch	evacuation coordination	Planned	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DEMA WebEOC System	Utah State Police Dispatch	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DEMA WebEOC System	Utah State Police Dispatch	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DEMA WebEOC System	Utah State Police Dispatch	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DEMA WebEOC System	Utah State Police Dispatch	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DEMA WebEOC System	Utah State Police Dispatch	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DEMA WebEOC System	Utah State Police Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DPS Central Communications Center	ADOT 511 Website	alert notification	Existing	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
DPS Central Communications Center	ADOT 511 Website	evacuation information	Existing	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
DPS Central Communications Center	ADOT 511 Website	incident information for public	Planned	Report of current desensitized incident information prepared for public dissemination.
DPS Central Communications Center	ADOT 511 Website	road network conditions	Existing	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.
DPS Central Communications Center	ADOT 511 Website	traffic control information	Planned	Represents the flow of traffic control and status information between centers. This is reporting only, not actual control. This specifically includes the current state of any demand management strategies that have been implemented.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Central Communications Center	ADOT 511 Website	traffic images	Existing	High fidelity, real-time traffic images suitable for surveillance monitoring by the operator or for use in machine vision applications. This flow includes the images. Meta data that describes the images is contained in another flow.
DPS Central Communications Center	ADOT 511 Website	transportation system status	Existing	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DPS Central Communications Center	ADOT Crash Reporting Information System (CRIS)	emergency archive data	Planned	Logged emergency information including information that characterizes identified incidents (routine highway incidents through disasters), corresponding incident response information, evacuation information, surveillance data, threat data, and resource information. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
DPS Central Communications Center	ADOT Crash Reporting Information System (CRIS)	traffic archive data	Planned	Information describing the use and vehicle composition on transportation facilities and the traffic control strategies employed. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
DPS Central Communications Center	ADOT DEOC-Dept EM Ops Center	alert notification	Existing	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
DPS Central Communications Center	ADOT DEOC-Dept EM Ops Center	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DPS Central Communications Center	ADOT DEOC-Dept EM Ops Center	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
DPS Central Communications Center	ADOT DEOC-Dept EM Ops Center	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DPS Central Communications Center	ADOT DEOC-Dept EM Ops Center	emergency traffic control information	Existing	Status of a special traffic control strategy or system activation implemented in response to an emergency traffic control request, a request for emergency access routes, a request for evacuation, a request to activate closure systems, a request to employ driver information systems to support public safety objectives, or other special requests. Identifies the selected traffic control strategy and system control status.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Central Communications Center	ADOT DEOC-Dept EM Ops Center	emergency traffic control request	Existing	Special request to preempt the current traffic control strategy in effect at one or more signalized intersections or highway segments, activate traffic control and closure systems such as gates and barriers, activate safeguard systems, or use driver information systems. For example, this flow can request all signals to red-flash, request a progression of traffic control preemptions along an emergency vehicle route, request a specific evacuation traffic control plan, request activation of a road closure barrier system, or place a public safety or emergency-related message on a dynamic message sign.
DPS Central Communications Center	ADOT DEOC-Dept EM Ops Center	emergency traffic coordination	Existing	Coordination supporting disaster response including evacuation and reentry. Includes coordination of special traffic control strategies that support efficient evacuation and reentry while protecting and optimizing movement of response vehicles and other resources responding to the emergency.
DPS Central Communications Center	ADOT DEOC-Dept EM Ops Center	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DPS Central Communications Center	ADOT DEOC-Dept EM Ops Center	evacuation information	Existing	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
DPS Central Communications Center	ADOT DEOC-Dept EM Ops Center	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DPS Central Communications Center	ADOT DEOC-Dept EM Ops Center	incident information	Existing	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
DPS Central Communications Center	ADOT DEOC-Dept EM Ops Center	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DPS Central Communications Center	ADOT DEOC-Dept EM Ops Center	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DPS Central Communications Center	ADOT DEOC-Dept EM Ops Center	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Central Communications Center	ADOT DEOC-Dept EM Ops Center	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DPS Central Communications Center	ADOT DEOC-Dept EM Ops Center	resource deployment status	Planned	Status of resource deployment identifying the resources (vehicles, equipment, materials, and personnel) available and their current status. General resource inventory information and specific status of deployed resources may be included.
DPS Central Communications Center	ADOT DEOC-Dept EM Ops Center	resource request	Planned	A request for resources to implement special traffic control measures, assist in clean up, verify an incident, etc. The request may poll for resource availability or request pre-staging, staging, or immediate deployment of resources. Resources may be explicitly requested or a service may be requested and the specific resource deployment may be determined by the responding agency.
DPS Central Communications Center	ADOT DEOC-Dept EM Ops Center	road network conditions	Existing	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.
DPS Central Communications Center	ADOT DEOC-Dept EM Ops Center	road network status assessment	Planned	Assessment of damage sustained by the road network including location and extent of the damage, estimate of remaining capacity, required closures, alternate routes, necessary restrictions, and time frame for repair and recovery.
DPS Central Communications Center	ADOT DEOC-Dept EM Ops Center	threat information	Existing	Threats regarding transportation infrastructure, facilities, or systems detected by a variety of methods (sensors, surveillance, threat analysis of advisories from outside agencies, etc.
DPS Central Communications Center	ADOT DEOC-Dept EM Ops Center	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DPS Central Communications Center	ADOT DEOC-Dept EM Ops Center	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DPS Central Communications Center	ADOT ECD Dispatch	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DPS Central Communications Center	ADOT ECD Dispatch	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
DPS Central Communications Center	ADOT ECD Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Central Communications Center	ADOT ECD Dispatch	emergency traffic control information	Existing	Status of a special traffic control strategy or system activation implemented in response to an emergency traffic control request, a request for emergency access routes, a request for evacuation, a request to activate closure systems, a request to employ driver information systems to support public safety objectives, or other special requests. Identifies the selected traffic control strategy and system control status.
DPS Central Communications Center	ADOT ECD Dispatch	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DPS Central Communications Center	ADOT ECD Dispatch	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DPS Central Communications Center	ADOT ECD Dispatch	incident information	Existing	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
DPS Central Communications Center	ADOT ECD Dispatch	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DPS Central Communications Center	ADOT ECD Dispatch	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DPS Central Communications Center	ADOT ECD Dispatch	incident response status	Existing	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
DPS Central Communications Center	ADOT ECD Dispatch	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DPS Central Communications Center	ADOT ECD Dispatch	resource deployment status	Existing	Status of resource deployment identifying the resources (vehicles, equipment, materials, and personnel) available and their current status. General resource inventory information and specific status of deployed resources may be included.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Central Communications Center	ADOT ECD Dispatch	resource request	Existing	A request for resources to implement special traffic control measures, assist in clean up, verify an incident, etc. The request may poll for resource availability or request pre-staging, staging, or immediate deployment of resources. Resources may be explicitly requested or a service may be requested and the specific resource deployment may be determined by the responding agency.
DPS Central Communications Center	ADOT ECD Dispatch	road network conditions	Existing	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.
DPS Central Communications Center	ADOT ECD Dispatch	road network status assessment	Planned	Assessment of damage sustained by the road network including location and extent of the damage, estimate of remaining capacity, required closures, alternate routes, necessary restrictions, and time frame for repair and recovery.
DPS Central Communications Center	ADOT ECD Dispatch	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DPS Central Communications Center	ADOT ECD Dispatch	traffic images	Existing	High fidelity, real-time traffic images suitable for surveillance monitoring by the operator or for use in machine vision applications. This flow includes the images. Meta data that describes the images is contained in another flow.
DPS Central Communications Center	ADOT ECD Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DPS Central Communications Center	ADOT ECD Operational Communications	alert notification coordination	Planned	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DPS Central Communications Center	ADOT ECD Operational Communications	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DPS Central Communications Center	ADOT ECD Operational Communications	emergency traffic control request	Planned	Special request to preempt the current traffic control strategy in effect at one or more signalized intersections or highway segments, activate traffic control and closure systems such as gates and barriers, activate safeguard systems, or use driver information systems. For example, this flow can request all signals to red-flash, request a progression of traffic control preemptions along an emergency vehicle route, request a specific evacuation traffic control plan, request activation of a road closure barrier system, or place a public safety or emergency-related message on a dynamic message sign.
DPS Central Communications Center	ADOT ECD Operational Communications	evacuation coordination	Planned	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Central Communications Center	ADOT ECD Operational Communications	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DPS Central Communications Center	ADOT ECD Operational Communications	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DPS Central Communications Center	ADOT ECD Operational Communications	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DPS Central Communications Center	ADOT ECD Operational Communications	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DPS Central Communications Center	ADOT ECD Operational Communications	resource deployment status	Planned	Status of resource deployment identifying the resources (vehicles, equipment, materials, and personnel) available and their current status. General resource inventory information and specific status of deployed resources may be included.
DPS Central Communications Center	ADOT ECD Operational Communications	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DPS Central Communications Center	ADOT ECD Operational Communications	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DPS Central Communications Center	ADOT HazMat Response Data Archive	emergency archive data	Existing	Logged emergency information including information that characterizes identified incidents (routine highway incidents through disasters), corresponding incident response information, evacuation information, surveillance data, threat data, and resource information. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
DPS Central Communications Center	ADOT HazMat Response Team	alert notification	Existing	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Central Communications Center	ADOT HazMat Response Team	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DPS Central Communications Center	ADOT HazMat Response Team	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
DPS Central Communications Center	ADOT HazMat Response Team	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DPS Central Communications Center	ADOT HazMat Response Team	emergency traffic control information	Existing	Status of a special traffic control strategy or system activation implemented in response to an emergency traffic control request, a request for emergency access routes, a request for evacuation, a request to activate closure systems, a request to employ driver information systems to support public safety objectives, or other special requests. Identifies the selected traffic control strategy and system control status.
DPS Central Communications Center	ADOT HazMat Response Team	emergency traffic control request	Existing	Special request to preempt the current traffic control strategy in effect at one or more signalized intersections or highway segments, activate traffic control and closure systems such as gates and barriers, activate safeguard systems, or use driver information systems. For example, this flow can request all signals to red-flash, request a progression of traffic control preemptions along an emergency vehicle route, request a specific evacuation traffic control plan, request activation of a road closure barrier system, or place a public safety or emergency-related message on a dynamic message sign.
DPS Central Communications Center	ADOT HazMat Response Team	emergency traffic coordination	Existing	Coordination supporting disaster response including evacuation and reentry. Includes coordination of special traffic control strategies that support efficient evacuation and reentry while protecting and optimizing movement of response vehicles and other resources responding to the emergency.
DPS Central Communications Center	ADOT HazMat Response Team	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DPS Central Communications Center	ADOT HazMat Response Team	evacuation information	Existing	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
DPS Central Communications Center	ADOT HazMat Response Team	incident command information coordination	Existing	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Central Communications Center	ADOT HazMat Response Team	incident information	Existing	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
DPS Central Communications Center	ADOT HazMat Response Team	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DPS Central Communications Center	ADOT HazMat Response Team	incident response coordination	Existing	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DPS Central Communications Center	ADOT HazMat Response Team	incident response status	Existing	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
DPS Central Communications Center	ADOT HazMat Response Team	remote surveillance control	Existing	The control commands used to remotely operate another center's sensors or surveillance equipment so that roadside surveillance assets can be shared by more than one agency.
DPS Central Communications Center	ADOT HazMat Response Team	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DPS Central Communications Center	ADOT HazMat Response Team	resource deployment status	Existing	Status of resource deployment identifying the resources (vehicles, equipment, materials, and personnel) available and their current status. General resource inventory information and specific status of deployed resources may be included.
DPS Central Communications Center	ADOT HazMat Response Team	resource request	Existing	A request for resources to implement special traffic control measures, assist in clean up, verify an incident, etc. The request may poll for resource availability or request pre-staging, staging, or immediate deployment of resources. Resources may be explicitly requested or a service may be requested and the specific resource deployment may be determined by the responding agency.
DPS Central Communications Center	ADOT HazMat Response Team	road network conditions	Existing	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.
DPS Central Communications Center	ADOT HazMat Response Team	road network status assessment	Planned	Assessment of damage sustained by the road network including location and extent of the damage, estimate of remaining capacity, required closures, alternate routes, necessary restrictions, and time frame for repair and recovery.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Central Communications Center	ADOT HazMat Response Team	threat information	Existing	Threats regarding transportation infrastructure, facilities, or systems detected by a variety of methods (sensors, surveillance, threat analysis of advisories from outside agencies, etc.
DPS Central Communications Center	ADOT HazMat Response Team	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DPS Central Communications Center	ADOT HazMat Response Team	traffic images	Existing	High fidelity, real-time traffic images suitable for surveillance monitoring by the operator or for use in machine vision applications. This flow includes the images. Meta data that describes the images is contained in another flow.
DPS Central Communications Center	ADOT HazMat Response Team	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DPS Central Communications Center	ADOT Incident Response Unit (IRU)	alert notification	Existing	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
DPS Central Communications Center	ADOT Incident Response Unit (IRU)	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DPS Central Communications Center	ADOT Incident Response Unit (IRU)	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
DPS Central Communications Center	ADOT Incident Response Unit (IRU)	incident command information coordination	Existing	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DPS Central Communications Center	ADOT Incident Response Unit (IRU)	incident information	Existing	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
DPS Central Communications Center	ADOT Incident Response Unit (IRU)	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Central Communications Center	ADOT Incident Response Unit (IRU)	incident response coordination	Existing	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DPS Central Communications Center	ADOT Incident Response Unit (IRU)	incident response status	Existing	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
DPS Central Communications Center	ADOT Incident Response Unit (IRU)	resource coordination	Existing	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DPS Central Communications Center	ADOT Incident Response Unit (IRU)	resource deployment status	Existing	Status of resource deployment identifying the resources (vehicles, equipment, materials, and personnel) available and their current status. General resource inventory information and specific status of deployed resources may be included.
DPS Central Communications Center	ADOT Incident Response Unit (IRU)	resource request	Existing	A request for resources to implement special traffic control measures, assist in clean up, verify an incident, etc. The request may poll for resource availability or request pre-staging, staging, or immediate deployment of resources. Resources may be explicitly requested or a service may be requested and the specific resource deployment may be determined by the responding agency.
DPS Central Communications Center	ADOT IRU Vehicles	service patrol dispatch request	Existing	Service patrol dispatch instructions including incident location and available information concerning the incident.
DPS Central Communications Center	ADOT Roadside Comm Equipment	roadway dynamic signage data	Existing	Information used to initialize, configure, and control dynamic message signs. This flow can provide message content and delivery attributes, local message store maintenance requests, control mode commands, status queries, and all other commands and associated parameters that support remote management of these devices.
DPS Central Communications Center	ADOT Roadside Comm Equipment	safeguard system control	Planned	Data that controls safeguard systems (remotely controlled equipment used to mitigate the impact of incidents on transportation infrastructure, such as blast shields, exhaust systems, etc.).
DPS Central Communications Center	ADOT Roadside Comm Equipment	traffic detector control	Existing	Information used to configure and control traffic detector systems such as inductive loop detectors and machine vision sensors.
DPS Central Communications Center	ADOT Roadside Comm Equipment	video surveillance control	Existing	Information used to configure and control video surveillance systems.
DPS Central Communications Center	ADOT TOC and EMC	alert notification	Existing	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Central Communications Center	ADOT TOC and EMC	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DPS Central Communications Center	ADOT TOC and EMC	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
DPS Central Communications Center	ADOT TOC and EMC	device control request	Existing	Request for device control action
DPS Central Communications Center	ADOT TOC and EMC	device data	Existing	Data from detectors, environmental sensor stations, roadside equipment, and traffic control devices, including device inventory information.
DPS Central Communications Center	ADOT TOC and EMC	device status	Existing	Status information from devices
DPS Central Communications Center	ADOT TOC and EMC	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DPS Central Communications Center	ADOT TOC and EMC	emergency route request	Existing	Request for access routes for emergency response vehicles and equipment. This may be a request for ingress or egress routes or other emergency routes. It may also include a request for preemption/priority for the identified vehicle at all signalized intersections along the route.
DPS Central Communications Center	ADOT TOC and EMC	emergency routes	Planned	Suggested ingress and egress routes for access to and between the scene and staging areas or other specialized emergency access routes.
DPS Central Communications Center	ADOT TOC and EMC	emergency traffic control information	Existing	Status of a special traffic control strategy or system activation implemented in response to an emergency traffic control request, a request for emergency access routes, a request for evacuation, a request to activate closure systems, a request to employ driver information systems to support public safety objectives, or other special requests. Identifies the selected traffic control strategy and system control status.
DPS Central Communications Center	ADOT TOC and EMC	emergency traffic control request	Existing	Special request to preempt the current traffic control strategy in effect at one or more signalized intersections or highway segments, activate traffic control and closure systems such as gates and barriers, activate safeguard systems, or use driver information systems. For example, this flow can request all signals to red-flash, request a progression of traffic control preemptions along an emergency vehicle route, request a specific evacuation traffic control plan, request activation of a road closure barrier system, or place a public safety or emergency-related message on a dynamic message sign.
DPS Central Communications Center	ADOT TOC and EMC	emergency traffic coordination	Existing	Coordination supporting disaster response including evacuation and reentry. Includes coordination of special traffic control strategies that support efficient evacuation and reentry while protecting and optimizing movement of response vehicles and other resources responding to the emergency.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Central Communications Center	ADOT TOC and EMC	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DPS Central Communications Center	ADOT TOC and EMC	evacuation information	Existing	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
DPS Central Communications Center	ADOT TOC and EMC	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DPS Central Communications Center	ADOT TOC and EMC	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
DPS Central Communications Center	ADOT TOC and EMC	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DPS Central Communications Center	ADOT TOC and EMC	incident response coordination	Existing	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DPS Central Communications Center	ADOT TOC and EMC	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
DPS Central Communications Center	ADOT TOC and EMC	remote surveillance control	Existing	The control commands used to remotely operate another center's sensors or surveillance equipment so that roadside surveillance assets can be shared by more than one agency.
DPS Central Communications Center	ADOT TOC and EMC	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DPS Central Communications Center	ADOT TOC and EMC	resource deployment status	Planned	Status of resource deployment identifying the resources (vehicles, equipment, materials, and personnel) available and their current status. General resource inventory information and specific status of deployed resources may be included.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Central Communications Center	ADOT TOC and EMC	resource request	Planned	A request for resources to implement special traffic control measures, assist in clean up, verify an incident, etc. The request may poll for resource availability or request pre-staging, staging, or immediate deployment of resources. Resources may be explicitly requested or a service may be requested and the specific resource deployment may be determined by the responding agency.
DPS Central Communications Center	ADOT TOC and EMC	road closure notification	Existing	Notification that agency personnel have closed a road due to adverse weather, major incident, or other reason.
DPS Central Communications Center	ADOT TOC and EMC	road network conditions	Existing	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.
DPS Central Communications Center	ADOT TOC and EMC	road network status assessment	Planned	Assessment of damage sustained by the road network including location and extent of the damage, estimate of remaining capacity, required closures, alternate routes, necessary restrictions, and time frame for repair and recovery.
DPS Central Communications Center	ADOT TOC and EMC	special vehicle restricted use information	Planned	Parameters necessary for implementing unrestricted access to controlled access or toll facilities by special vehicles; e.g., maintenance vehicles, emergency vehicles, etc.
DPS Central Communications Center	ADOT TOC and EMC	threat information	Planned	Threats regarding transportation infrastructure, facilities, or systems detected by a variety of methods (sensors, surveillance, threat analysis of advisories from outside agencies, etc.
DPS Central Communications Center	ADOT TOC and EMC	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DPS Central Communications Center	ADOT TOC and EMC	traffic image meta data	Planned	Meta data that describes traffic images. Traffic images (video) are in another flow.
DPS Central Communications Center	ADOT TOC and EMC	traffic images	Existing	High fidelity, real-time traffic images suitable for surveillance monitoring by the operator or for use in machine vision applications. This flow includes the images. Meta data that describes the images is contained in another flow.
DPS Central Communications Center	ADOT TOC and EMC	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DPS Central Communications Center	ADOT TOC and EMC	wrong way vehicle notification	Planned	Notification to public safety that a vehicle has been detected traveling in the wrong direction. It includes information about the vehicle (make, model, color, other identification data) and the current location, speed, acceleration, and heading of the wrong way vehicle.
DPS Central Communications Center	ADOT TOC Traffic Information Center	road network conditions	Existing	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Central Communications Center	ADOT TOC Traffic Information Center	traffic images	Existing	High fidelity, real-time traffic images suitable for surveillance monitoring by the operator or for use in machine vision applications. This flow includes the images. Meta data that describes the images is contained in another flow.
DPS Central Communications Center	AZTech Traffic Ops Center	device control request	Existing	Request for device control action
DPS Central Communications Center	AZTech Traffic Ops Center	device data	Existing	Data from detectors, environmental sensor stations, roadside equipment, and traffic control devices, including device inventory information.
DPS Central Communications Center	AZTech Traffic Ops Center	device status	Existing	Status information from devices
DPS Central Communications Center	AZTech Traffic Ops Center	emergency traffic coordination	Existing	Coordination supporting disaster response including evacuation and reentry. Includes coordination of special traffic control strategies that support efficient evacuation and reentry while protecting and optimizing movement of response vehicles and other resources responding to the emergency.
DPS Central Communications Center	AZTech Traffic Ops Center	incident information	Existing	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
DPS Central Communications Center	AZTech Traffic Ops Center	road network conditions	Existing	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.
DPS Central Communications Center	AZTech Traffic Ops Center	traffic images	Existing	High fidelity, real-time traffic images suitable for surveillance monitoring by the operator or for use in machine vision applications. This flow includes the images. Meta data that describes the images is contained in another flow.
DPS Central Communications Center	CHP Dispatch	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DPS Central Communications Center	CHP Dispatch	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
DPS Central Communications Center	CHP Dispatch	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Central Communications Center	CHP Dispatch	emergency traffic control information	Existing	Status of a special traffic control strategy or system activation implemented in response to an emergency traffic control request, a request for emergency access routes, a request for evacuation, a request to activate closure systems, a request to employ driver information systems to support public safety objectives, or other special requests. Identifies the selected traffic control strategy and system control status.
DPS Central Communications Center	CHP Dispatch	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DPS Central Communications Center	CHP Dispatch	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DPS Central Communications Center	CHP Dispatch	incident information	Existing	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
DPS Central Communications Center	CHP Dispatch	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DPS Central Communications Center	CHP Dispatch	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DPS Central Communications Center	CHP Dispatch	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DPS Central Communications Center	CHP Dispatch	resource deployment status	Planned	Status of resource deployment identifying the resources (vehicles, equipment, materials, and personnel) available and their current status. General resource inventory information and specific status of deployed resources may be included.
DPS Central Communications Center	CHP Dispatch	road network conditions	Existing	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Central Communications Center	CHP Dispatch	road network status assessment	Planned	Assessment of damage sustained by the road network including location and extent of the damage, estimate of remaining capacity, required closures, alternate routes, necessary restrictions, and time frame for repair and recovery.
DPS Central Communications Center	CHP Dispatch	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DPS Central Communications Center	CHP Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DPS Central Communications Center	Cities and Towns Data Archive	emergency archive data	Existing	Logged emergency information including information that characterizes identified incidents (routine highway incidents through disasters), corresponding incident response information, evacuation information, surveillance data, threat data, and resource information. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
DPS Central Communications Center	Cities and Towns Data Archive	traffic archive data	Existing	Information describing the use and vehicle composition on transportation facilities and the traffic control strategies employed. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
DPS Central Communications Center	Cities and Towns EOC-EMC	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DPS Central Communications Center	Cities and Towns EOC-EMC	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
DPS Central Communications Center	Cities and Towns EOC-EMC	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DPS Central Communications Center	Cities and Towns EOC-EMC	emergency traffic control information	Existing	Status of a special traffic control strategy or system activation implemented in response to an emergency traffic control request, a request for emergency access routes, a request for evacuation, a request to activate closure systems, a request to employ driver information systems to support public safety objectives, or other special requests. Identifies the selected traffic control strategy and system control status.
DPS Central Communications Center	Cities and Towns EOC-EMC	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Central Communications Center	Cities and Towns EOC-EMC	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DPS Central Communications Center	Cities and Towns EOC-EMC	incident information	Existing	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
DPS Central Communications Center	Cities and Towns EOC-EMC	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DPS Central Communications Center	Cities and Towns EOC-EMC	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DPS Central Communications Center	Cities and Towns EOC-EMC	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DPS Central Communications Center	Cities and Towns EOC-EMC	resource deployment status	Planned	Status of resource deployment identifying the resources (vehicles, equipment, materials, and personnel) available and their current status. General resource inventory information and specific status of deployed resources may be included.
DPS Central Communications Center	Cities and Towns EOC-EMC	road network conditions	Existing	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.
DPS Central Communications Center	Cities and Towns EOC-EMC	road network status assessment	Planned	Assessment of damage sustained by the road network including location and extent of the damage, estimate of remaining capacity, required closures, alternate routes, necessary restrictions, and time frame for repair and recovery.
DPS Central Communications Center	Cities and Towns EOC-EMC	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DPS Central Communications Center	Cities and Towns EOC-EMC	traffic images	Planned	High fidelity, real-time traffic images suitable for surveillance monitoring by the operator or for use in machine vision applications. This flow includes the images. Meta data that describes the images is contained in another flow.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Central Communications Center	Cities and Towns EOC-EMC	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DPS Central Communications Center	Cities and Towns Police and Fire Dispatch	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DPS Central Communications Center	Cities and Towns Police and Fire Dispatch	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
DPS Central Communications Center	Cities and Towns Police and Fire Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DPS Central Communications Center	Cities and Towns Police and Fire Dispatch	emergency traffic control information	Existing	Status of a special traffic control strategy or system activation implemented in response to an emergency traffic control request, a request for emergency access routes, a request for evacuation, a request to activate closure systems, a request to employ driver information systems to support public safety objectives, or other special requests. Identifies the selected traffic control strategy and system control status.
DPS Central Communications Center	Cities and Towns Police and Fire Dispatch	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DPS Central Communications Center	Cities and Towns Police and Fire Dispatch	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DPS Central Communications Center	Cities and Towns Police and Fire Dispatch	incident information	Existing	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
DPS Central Communications Center	Cities and Towns Police and Fire Dispatch	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Central Communications Center	Cities and Towns Police and Fire Dispatch	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DPS Central Communications Center	Cities and Towns Police and Fire Dispatch	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
DPS Central Communications Center	Cities and Towns Police and Fire Dispatch	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DPS Central Communications Center	Cities and Towns Police and Fire Dispatch	resource deployment status	Planned	Status of resource deployment identifying the resources (vehicles, equipment, materials, and personnel) available and their current status. General resource inventory information and specific status of deployed resources may be included.
DPS Central Communications Center	Cities and Towns Police and Fire Dispatch	road network conditions	Existing	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.
DPS Central Communications Center	Cities and Towns Police and Fire Dispatch	road network status assessment	Planned	Assessment of damage sustained by the road network including location and extent of the damage, estimate of remaining capacity, required closures, alternate routes, necessary restrictions, and time frame for repair and recovery.
DPS Central Communications Center	Cities and Towns Police and Fire Dispatch	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DPS Central Communications Center	Cities and Towns Police and Fire Dispatch	traffic images	Planned	High fidelity, real-time traffic images suitable for surveillance monitoring by the operator or for use in machine vision applications. This flow includes the images. Meta data that describes the images is contained in another flow.
DPS Central Communications Center	Cities and Towns Police and Fire Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DPS Central Communications Center	Cities and Towns TMC-TOC	alert notification	Planned	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Central Communications Center	Cities and Towns TMC-TOC	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DPS Central Communications Center	Cities and Towns TMC-TOC	emergency traffic control request	Planned	Special request to preempt the current traffic control strategy in effect at one or more signalized intersections or highway segments, activate traffic control and closure systems such as gates and barriers, activate safeguard systems, or use driver information systems. For example, this flow can request all signals to red-flash, request a progression of traffic control preemptions along an emergency vehicle route, request a specific evacuation traffic control plan, request activation of a road closure barrier system, or place a public safety or emergency-related message on a dynamic message sign.
DPS Central Communications Center	Cities and Towns TMC-TOC	emergency traffic coordination	Planned	Coordination supporting disaster response including evacuation and reentry. Includes coordination of special traffic control strategies that support efficient evacuation and reentry while protecting and optimizing movement of response vehicles and other resources responding to the emergency.
DPS Central Communications Center	Cities and Towns TMC-TOC	evacuation information	Planned	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
DPS Central Communications Center	Cities and Towns TMC-TOC	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
DPS Central Communications Center	Cities and Towns TMC-TOC	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
DPS Central Communications Center	Cities and Towns TMC-TOC	resource request	Planned	A request for resources to implement special traffic control measures, assist in clean up, verify an incident, etc. The request may poll for resource availability or request pre-staging, staging, or immediate deployment of resources. Resources may be explicitly requested or a service may be requested and the specific resource deployment may be determined by the responding agency.
DPS Central Communications Center	Cities and Towns TMC-TOC	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Central Communications Center	Cities and Towns Transit Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DPS Central Communications Center	Cities and Towns Transit Dispatch	emergency transit service request	Existing	Request to modify transit service and fare schedules to address emergencies, including requests for transit services to evacuate people from and/or deploy response agency personnel to an emergency scene. The request may poll for resource availability or request pre-staging, staging, or immediate dispatch of transit resources.
DPS Central Communications Center	Cities and Towns Transit Dispatch	evacuation information	Existing	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
DPS Central Communications Center	Cities and Towns Transit Dispatch	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
DPS Central Communications Center	Cities and Towns Transit Dispatch	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
DPS Central Communications Center	Cities and Towns Transit Dispatch	road network conditions	Existing	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.
DPS Central Communications Center	Cities and Towns Transit Dispatch	threat information	Planned	Threats regarding transportation infrastructure, facilities, or systems detected by a variety of methods (sensors, surveillance, threat analysis of advisories from outside agencies, etc.
DPS Central Communications Center	Cities and Towns Transit Dispatch	traffic images	Planned	High fidelity, real-time traffic images suitable for surveillance monitoring by the operator or for use in machine vision applications. This flow includes the images. Meta data that describes the images is contained in another flow.
DPS Central Communications Center	Cities and Towns Transit Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Central Communications Center	Commercial Vehicle Driver and Vehicle Verification Systems	emergency archive data	Existing	Logged emergency information including information that characterizes identified incidents (routine highway incidents through disasters), corresponding incident response information, evacuation information, surveillance data, threat data, and resource information. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
DPS Central Communications Center	Commercial Vehicle Driver and Vehicle Verification Systems	traffic archive data	Existing	Information describing the use and vehicle composition on transportation facilities and the traffic control strategies employed. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
DPS Central Communications Center	County 911 PSAPs	incident information for public	Existing	Report of current desensitized incident information prepared for public dissemination.
DPS Central Communications Center	County 911 PSAPs	incident notification response	Existing	Interactive acknowledgement and verification of the incident information received, requests for additional information, and general information on incident response status.
DPS Central Communications Center	County EMC-EOC	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DPS Central Communications Center	County EMC-EOC	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
DPS Central Communications Center	County EMC-EOC	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DPS Central Communications Center	County EMC-EOC	emergency traffic control information	Existing	Status of a special traffic control strategy or system activation implemented in response to an emergency traffic control request, a request for emergency access routes, a request for evacuation, a request to activate closure systems, a request to employ driver information systems to support public safety objectives, or other special requests. Identifies the selected traffic control strategy and system control status.
DPS Central Communications Center	County EMC-EOC	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DPS Central Communications Center	County EMC-EOC	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Central Communications Center	County EMC-EOC	incident information	Existing	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
DPS Central Communications Center	County EMC-EOC	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DPS Central Communications Center	County EMC-EOC	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DPS Central Communications Center	County EMC-EOC	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DPS Central Communications Center	County EMC-EOC	resource deployment status	Planned	Status of resource deployment identifying the resources (vehicles, equipment, materials, and personnel) available and their current status. General resource inventory information and specific status of deployed resources may be included.
DPS Central Communications Center	County EMC-EOC	road network conditions	Existing	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.
DPS Central Communications Center	County EMC-EOC	road network status assessment	Planned	Assessment of damage sustained by the road network including location and extent of the damage, estimate of remaining capacity, required closures, alternate routes, necessary restrictions, and time frame for repair and recovery.
DPS Central Communications Center	County EMC-EOC	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DPS Central Communications Center	County EMC-EOC	traffic images	Planned	High fidelity, real-time traffic images suitable for surveillance monitoring by the operator or for use in machine vision applications. This flow includes the images. Meta data that describes the images is contained in another flow.
DPS Central Communications Center	County EMC-EOC	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Central Communications Center	County Sheriff Dispatch	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DPS Central Communications Center	County Sheriff Dispatch	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
DPS Central Communications Center	County Sheriff Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DPS Central Communications Center	County Sheriff Dispatch	emergency traffic control information	Existing	Status of a special traffic control strategy or system activation implemented in response to an emergency traffic control request, a request for emergency access routes, a request for evacuation, a request to activate closure systems, a request to employ driver information systems to support public safety objectives, or other special requests. Identifies the selected traffic control strategy and system control status.
DPS Central Communications Center	County Sheriff Dispatch	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DPS Central Communications Center	County Sheriff Dispatch	incident command information coordination	Existing	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DPS Central Communications Center	County Sheriff Dispatch	incident information	Existing	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
DPS Central Communications Center	County Sheriff Dispatch	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DPS Central Communications Center	County Sheriff Dispatch	incident response coordination	Existing	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Central Communications Center	County Sheriff Dispatch	incident response status	Existing	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
DPS Central Communications Center	County Sheriff Dispatch	resource coordination	Existing	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DPS Central Communications Center	County Sheriff Dispatch	resource deployment status	Existing	Status of resource deployment identifying the resources (vehicles, equipment, materials, and personnel) available and their current status. General resource inventory information and specific status of deployed resources may be included.
DPS Central Communications Center	County Sheriff Dispatch	road network conditions	Existing	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.
DPS Central Communications Center	County Sheriff Dispatch	road network status assessment	Planned	Assessment of damage sustained by the road network including location and extent of the damage, estimate of remaining capacity, required closures, alternate routes, necessary restrictions, and time frame for repair and recovery.
DPS Central Communications Center	County Sheriff Dispatch	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DPS Central Communications Center	County Sheriff Dispatch	traffic images	Existing	High fidelity, real-time traffic images suitable for surveillance monitoring by the operator or for use in machine vision applications. This flow includes the images. Meta data that describes the images is contained in another flow.
DPS Central Communications Center	County Sheriff Dispatch	transportation system status	Existing	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DPS Central Communications Center	County TMC-TOC	alert notification	Existing	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
DPS Central Communications Center	County TMC-TOC	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Central Communications Center	County TMC-TOC	emergency traffic control request	Existing	Special request to preempt the current traffic control strategy in effect at one or more signalized intersections or highway segments, activate traffic control and closure systems such as gates and barriers, activate safeguard systems, or use driver information systems. For example, this flow can request all signals to red-flash, request a progression of traffic control preemptions along an emergency vehicle route, request a specific evacuation traffic control plan, request activation of a road closure barrier system, or place a public safety or emergency-related message on a dynamic message sign.
DPS Central Communications Center	County TMC-TOC	emergency traffic coordination	Existing	Coordination supporting disaster response including evacuation and reentry. Includes coordination of special traffic control strategies that support efficient evacuation and reentry while protecting and optimizing movement of response vehicles and other resources responding to the emergency.
DPS Central Communications Center	County TMC-TOC	evacuation information	Existing	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
DPS Central Communications Center	County TMC-TOC	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
DPS Central Communications Center	County TMC-TOC	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
DPS Central Communications Center	County TMC-TOC	resource request	Planned	A request for resources to implement special traffic control measures, assist in clean up, verify an incident, etc. The request may poll for resource availability or request pre-staging, staging, or immediate deployment of resources. Resources may be explicitly requested or a service may be requested and the specific resource deployment may be determined by the responding agency.
DPS Central Communications Center	County TMC-TOC	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DPS Central Communications Center	DEMA CRT - HazMat Response Team	alert notification	Existing	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Central Communications Center	DEMA CRT - HazMat Response Team	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DPS Central Communications Center	DEMA CRT - HazMat Response Team	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
DPS Central Communications Center	DEMA CRT - HazMat Response Team	incident command information coordination	Existing	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DPS Central Communications Center	DEMA CRT - HazMat Response Team	incident information	Existing	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
DPS Central Communications Center	DEMA CRT - HazMat Response Team	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DPS Central Communications Center	DEMA CRT - HazMat Response Team	incident response coordination	Existing	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DPS Central Communications Center	DEMA CRT - HazMat Response Team	incident response status	Existing	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
DPS Central Communications Center	DEMA CRT - HazMat Response Team	resource coordination	Existing	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DPS Central Communications Center	DEMA CRT - HazMat Response Team	resource deployment status	Existing	Status of resource deployment identifying the resources (vehicles, equipment, materials, and personnel) available and their current status. General resource inventory information and specific status of deployed resources may be included.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Central Communications Center	DEMA CRT - HazMat Response Team	resource request	Existing	A request for resources to implement special traffic control measures, assist in clean up, verify an incident, etc. The request may poll for resource availability or request pre-staging, staging, or immediate deployment of resources. Resources may be explicitly requested or a service may be requested and the specific resource deployment may be determined by the responding agency.
DPS Central Communications Center	DEMA Data Archive	emergency archive data	Planned	Logged emergency information including information that characterizes identified incidents (routine highway incidents through disasters), corresponding incident response information, evacuation information, surveillance data, threat data, and resource information. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
DPS Central Communications Center	DEMA Data Archive	traffic archive data	Planned	Information describing the use and vehicle composition on transportation facilities and the traffic control strategies employed. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
DPS Central Communications Center	DEMA Emergency Alert System	threat data for analysis	Planned	Data from surveillance or sensor equipment in secure areas provided for further analysis.
DPS Central Communications Center	DEMA Emergency Alert System	threat information	Planned	Threats regarding transportation infrastructure, facilities, or systems detected by a variety of methods (sensors, surveillance, threat analysis of advisories from outside agencies, etc.
DPS Central Communications Center	DEMA Enforcement	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DPS Central Communications Center	DEMA Enforcement	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DPS Central Communications Center	DEMA Enforcement	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DPS Central Communications Center	DEMA Enforcement	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DPS Central Communications Center	DEMA Enforcement	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Central Communications Center	DEMA Enforcement	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DPS Central Communications Center	DEMA Enforcement	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DPS Central Communications Center	DEMA Enforcement	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DPS Central Communications Center	DEMA Enforcement	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DPS Central Communications Center	DEMA SEOC Arizona DEM Military Affairs	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DPS Central Communications Center	DEMA SEOC Arizona DEM Military Affairs	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
DPS Central Communications Center	DEMA SEOC Arizona DEM Military Affairs	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DPS Central Communications Center	DEMA SEOC Arizona DEM Military Affairs	emergency traffic control information	Existing	Status of a special traffic control strategy or system activation implemented in response to an emergency traffic control request, a request for emergency access routes, a request for evacuation, a request to activate closure systems, a request to employ driver information systems to support public safety objectives, or other special requests. Identifies the selected traffic control strategy and system control status.
DPS Central Communications Center	DEMA SEOC Arizona DEM Military Affairs	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DPS Central Communications Center	DEMA SEOC Arizona DEM Military Affairs	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Central Communications Center	DEMA SEOC Arizona DEM Military Affairs	incident information	Existing	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
DPS Central Communications Center	DEMA SEOC Arizona DEM Military Affairs	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DPS Central Communications Center	DEMA SEOC Arizona DEM Military Affairs	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DPS Central Communications Center	DEMA SEOC Arizona DEM Military Affairs	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DPS Central Communications Center	DEMA SEOC Arizona DEM Military Affairs	resource deployment status	Planned	Status of resource deployment identifying the resources (vehicles, equipment, materials, and personnel) available and their current status. General resource inventory information and specific status of deployed resources may be included.
DPS Central Communications Center	DEMA SEOC Arizona DEM Military Affairs	road network conditions	Existing	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.
DPS Central Communications Center	DEMA SEOC Arizona DEM Military Affairs	road network status assessment	Planned	Assessment of damage sustained by the road network including location and extent of the damage, estimate of remaining capacity, required closures, alternate routes, necessary restrictions, and time frame for repair and recovery.
DPS Central Communications Center	DEMA SEOC Arizona DEM Military Affairs	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DPS Central Communications Center	DEMA SEOC Arizona DEM Military Affairs	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DPS Central Communications Center	DEMA WebEOC System	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Central Communications Center	DEMA WebEOC System	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DPS Central Communications Center	DEMA WebEOC System	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DPS Central Communications Center	DEMA WebEOC System	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DPS Central Communications Center	DEMA WebEOC System	incident information for public	Existing	Report of current desensitized incident information prepared for public dissemination.
DPS Central Communications Center	DEMA WebEOC System	incident notification response	Planned	Interactive acknowledgement and verification of the incident information received, requests for additional information, and general information on incident response status.
DPS Central Communications Center	DEMA WebEOC System	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DPS Central Communications Center	DEMA WebEOC System	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DPS Central Communications Center	DEMA WebEOC System	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DPS Central Communications Center	DEMA WebEOC System	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DPS Central Communications Center	DEMA WebEOC System	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DPS Central Communications Center	DPS Commercial Vehicle Enforcement	request for enforcement	Planned	Request for traffic enforcement of speed limits, lane controls, etc. on a roadway including in a work zone or other special situations.
DPS Central Communications Center	DPS Console Interface (Other LE)	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Central Communications Center	DPS Console Interface (Other LE)	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DPS Central Communications Center	DPS Console Interface (Other LE)	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DPS Central Communications Center	DPS Console Interface (Other LE)	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DPS Central Communications Center	DPS Console Interface (Other LE)	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DPS Central Communications Center	DPS Console Interface (Other LE)	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DPS Central Communications Center	DPS Console Interface (Other LE)	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DPS Central Communications Center	DPS Console Interface (Other LE)	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DPS Central Communications Center	DPS Console Interface (Other LE)	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DPS Central Communications Center	DPS Data Archive	emergency archive data	Existing	Logged emergency information including information that characterizes identified incidents (routine highway incidents through disasters), corresponding incident response information, evacuation information, surveillance data, threat data, and resource information. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
DPS Central Communications Center	DPS Data Archive	traffic archive data	Existing	Information describing the use and vehicle composition on transportation facilities and the traffic control strategies employed. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Central Communications Center	DPS RMA Vehicles	decision support information	Planned	Information provided to support effective and safe incident response, including local traffic, road, and weather conditions, hazardous material information, and the current status of resources (including vehicles, other equipment, supplies) that have been allocated to an incident.
DPS Central Communications Center	DPS RMA Vehicles	emergency dispatch requests	Existing	Emergency vehicle dispatch instructions including incident location and available information concerning the incident.
DPS Central Communications Center	DPS RMA Vehicles	service patrol dispatch request	Existing	Service patrol dispatch instructions including incident location and available information concerning the incident.
DPS Central Communications Center	DPS RMA Vehicles	suggested route	Planned	Suggested route for a dispatched emergency or maintenance vehicle that may reflect current network conditions and the additional routing options available to en route emergency or maintenance vehicles that are not available to the general public.
DPS Central Communications Center	DPS Roadside Safety Inspection	request for enforcement	Planned	Request for traffic enforcement of speed limits, lane controls, etc. on a roadway including in a work zone or other special situations.
DPS Central Communications Center	DPS Vehicles	decision support information	Planned	Information provided to support effective and safe incident response, including local traffic, road, and weather conditions, hazardous material information, and the current status of resources (including vehicles, other equipment, supplies) that have been allocated to an incident.
DPS Central Communications Center	DPS Vehicles	emergency dispatch requests	Existing	Emergency vehicle dispatch instructions including incident location and available information concerning the incident.
DPS Central Communications Center	DPS Vehicles	service patrol dispatch request	Existing	Service patrol dispatch instructions including incident location and available information concerning the incident.
DPS Central Communications Center	DPS Vehicles	suggested route	Planned	Suggested route for a dispatched emergency or maintenance vehicle that may reflect current network conditions and the additional routing options available to en route emergency or maintenance vehicles that are not available to the general public.
DPS Central Communications Center	Emergency Medical Transport/Ambulances	emergency dispatch requests	Existing	Emergency vehicle dispatch instructions including incident location and available information concerning the incident.
DPS Central Communications Center	Fleet Management Systems	hazmat information request	Existing	Request for information about a particular hazmat load.
DPS Central Communications Center	Local Print and Broadcast Media	incident information for media	Existing	Report of current desensitized incident information prepared for public dissemination through the media.
DPS Central Communications Center	Local Print and Broadcast Media	traffic images	Planned	High fidelity, real-time traffic images suitable for surveillance monitoring by the operator or for use in machine vision applications. This flow includes the images. Meta data that describes the images is contained in another flow.
DPS Central Communications Center	Local Print and Broadcast Media	traffic information for media	Planned	Report of traffic conditions including traffic incident reports for public dissemination through the media. The reports may also include information on diversions and alternate routes, closures, and special traffic restrictions in effect.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Central Communications Center	Map Update System	map update notification	Planned	Notification of maintenance, construction, and other activities that will result in medium to long term changes to road location and configuration that may impact navigable maps. This flow includes the timing of the changes and precise enumeration of the location and configuration changes. It also includes updated static speed limits (perhaps other regulatory rules/signage - no U turns, etc.) and default travel times.
DPS Central Communications Center	Nevada State Police Dispatch	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DPS Central Communications Center	Nevada State Police Dispatch	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
DPS Central Communications Center	Nevada State Police Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DPS Central Communications Center	Nevada State Police Dispatch	emergency traffic control information	Existing	Status of a special traffic control strategy or system activation implemented in response to an emergency traffic control request, a request for emergency access routes, a request for evacuation, a request to activate closure systems, a request to employ driver information systems to support public safety objectives, or other special requests. Identifies the selected traffic control strategy and system control status.
DPS Central Communications Center	Nevada State Police Dispatch	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DPS Central Communications Center	Nevada State Police Dispatch	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DPS Central Communications Center	Nevada State Police Dispatch	incident information	Existing	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
DPS Central Communications Center	Nevada State Police Dispatch	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Central Communications Center	Nevada State Police Dispatch	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DPS Central Communications Center	Nevada State Police Dispatch	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DPS Central Communications Center	Nevada State Police Dispatch	resource deployment status	Planned	Status of resource deployment identifying the resources (vehicles, equipment, materials, and personnel) available and their current status. General resource inventory information and specific status of deployed resources may be included.
DPS Central Communications Center	Nevada State Police Dispatch	road network conditions	Existing	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.
DPS Central Communications Center	Nevada State Police Dispatch	road network status assessment	Planned	Assessment of damage sustained by the road network including location and extent of the damage, estimate of remaining capacity, required closures, alternate routes, necessary restrictions, and time frame for repair and recovery.
DPS Central Communications Center	Nevada State Police Dispatch	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DPS Central Communications Center	Nevada State Police Dispatch	traffic images	Planned	High fidelity, real-time traffic images suitable for surveillance monitoring by the operator or for use in machine vision applications. This flow includes the images. Meta data that describes the images is contained in another flow.
DPS Central Communications Center	Nevada State Police Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DPS Central Communications Center	New Mexico State Police Dispatch	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DPS Central Communications Center	New Mexico State Police Dispatch	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Central Communications Center	New Mexico State Police Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DPS Central Communications Center	New Mexico State Police Dispatch	emergency traffic control information	Existing	Status of a special traffic control strategy or system activation implemented in response to an emergency traffic control request, a request for emergency access routes, a request for evacuation, a request to activate closure systems, a request to employ driver information systems to support public safety objectives, or other special requests. Identifies the selected traffic control strategy and system control status.
DPS Central Communications Center	New Mexico State Police Dispatch	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DPS Central Communications Center	New Mexico State Police Dispatch	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DPS Central Communications Center	New Mexico State Police Dispatch	incident information	Existing	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
DPS Central Communications Center	New Mexico State Police Dispatch	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DPS Central Communications Center	New Mexico State Police Dispatch	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DPS Central Communications Center	New Mexico State Police Dispatch	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DPS Central Communications Center	New Mexico State Police Dispatch	resource deployment status	Planned	Status of resource deployment identifying the resources (vehicles, equipment, materials, and personnel) available and their current status. General resource inventory information and specific status of deployed resources may be included.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Central Communications Center	New Mexico State Police Dispatch	road network conditions	Existing	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.
DPS Central Communications Center	New Mexico State Police Dispatch	road network status assessment	Planned	Assessment of damage sustained by the road network including location and extent of the damage, estimate of remaining capacity, required closures, alternate routes, necessary restrictions, and time frame for repair and recovery.
DPS Central Communications Center	New Mexico State Police Dispatch	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DPS Central Communications Center	New Mexico State Police Dispatch	traffic images	Planned	High fidelity, real-time traffic images suitable for surveillance monitoring by the operator or for use in machine vision applications. This flow includes the images. Meta data that describes the images is contained in another flow.
DPS Central Communications Center	New Mexico State Police Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DPS Central Communications Center	Public Private Traveler Information	alert notification	Planned	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
DPS Central Communications Center	Public Private Traveler Information	evacuation information	Planned	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
DPS Central Communications Center	Public Private Traveler Information	incident information for public	Planned	Report of current desensitized incident information prepared for public dissemination.
DPS Central Communications Center	Public Private Traveler Information	road network conditions	Existing	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.
DPS Central Communications Center	Public Private Traveler Information	traffic control information	Planned	Represents the flow of traffic control and status information between centers. This is reporting only, not actual control. This specifically includes the current state of any demand management strategies that have been implemented.
DPS Central Communications Center	Public Private Traveler Information	traffic images	Existing	High fidelity, real-time traffic images suitable for surveillance monitoring by the operator or for use in machine vision applications. This flow includes the images. Meta data that describes the images is contained in another flow.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Central Communications Center	Public Private Traveler Information	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DPS Central Communications Center	Railroad Operations Center	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DPS Central Communications Center	Safety Fitness Electronic Record (SAFER)	request for enforcement	Planned	Request for traffic enforcement of speed limits, lane controls, etc. on a roadway including in a work zone or other special situations.
DPS Central Communications Center	Social Media and Networking	alert notification for social media	Planned	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public via social media. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This version of the flow contains only publicly available information and is structured and formatted for publication on specific social media platforms and other public-facing sites.
DPS Central Communications Center	Tribal Public Safety Dispatch	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DPS Central Communications Center	Tribal Public Safety Dispatch	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
DPS Central Communications Center	Tribal Public Safety Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DPS Central Communications Center	Tribal Public Safety Dispatch	emergency traffic control information	Existing	Status of a special traffic control strategy or system activation implemented in response to an emergency traffic control request, a request for emergency access routes, a request for evacuation, a request to activate closure systems, a request to employ driver information systems to support public safety objectives, or other special requests. Identifies the selected traffic control strategy and system control status.
DPS Central Communications Center	Tribal Public Safety Dispatch	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Central Communications Center	Tribal Public Safety Dispatch	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DPS Central Communications Center	Tribal Public Safety Dispatch	incident information	Existing	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
DPS Central Communications Center	Tribal Public Safety Dispatch	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DPS Central Communications Center	Tribal Public Safety Dispatch	incident response coordination	Existing	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DPS Central Communications Center	Tribal Public Safety Dispatch	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
DPS Central Communications Center	Tribal Public Safety Dispatch	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DPS Central Communications Center	Tribal Public Safety Dispatch	resource deployment status	Planned	Status of resource deployment identifying the resources (vehicles, equipment, materials, and personnel) available and their current status. General resource inventory information and specific status of deployed resources may be included.
DPS Central Communications Center	Tribal Public Safety Dispatch	road network conditions	Existing	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.
DPS Central Communications Center	Tribal Public Safety Dispatch	road network status assessment	Planned	Assessment of damage sustained by the road network including location and extent of the damage, estimate of remaining capacity, required closures, alternate routes, necessary restrictions, and time frame for repair and recovery.
DPS Central Communications Center	Tribal Public Safety Dispatch	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Central Communications Center	Tribal Public Safety Dispatch	traffic images	Planned	High fidelity, real-time traffic images suitable for surveillance monitoring by the operator or for use in machine vision applications. This flow includes the images. Meta data that describes the images is contained in another flow.
DPS Central Communications Center	Tribal Public Safety Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DPS Central Communications Center	US Border Patrol Dispatch	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DPS Central Communications Center	US Border Patrol Dispatch	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
DPS Central Communications Center	US Border Patrol Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DPS Central Communications Center	US Border Patrol Dispatch	emergency traffic control information	Existing	Status of a special traffic control strategy or system activation implemented in response to an emergency traffic control request, a request for emergency access routes, a request for evacuation, a request to activate closure systems, a request to employ driver information systems to support public safety objectives, or other special requests. Identifies the selected traffic control strategy and system control status.
DPS Central Communications Center	US Border Patrol Dispatch	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DPS Central Communications Center	US Border Patrol Dispatch	incident command information coordination	Existing	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DPS Central Communications Center	US Border Patrol Dispatch	incident response coordination	Existing	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Central Communications Center	US Border Patrol Dispatch	resource coordination	Existing	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DPS Central Communications Center	US Border Patrol Dispatch	resource deployment status	Existing	Status of resource deployment identifying the resources (vehicles, equipment, materials, and personnel) available and their current status. General resource inventory information and specific status of deployed resources may be included.
DPS Central Communications Center	US Border Patrol Dispatch	road network conditions	Existing	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.
DPS Central Communications Center	US Border Patrol Dispatch	road network status assessment	Existing	Assessment of damage sustained by the road network including location and extent of the damage, estimate of remaining capacity, required closures, alternate routes, necessary restrictions, and time frame for repair and recovery.
DPS Central Communications Center	US Border Patrol Dispatch	transportation system status	Existing	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DPS Central Communications Center	Utah State Police Dispatch	alert notification coordination	Planned	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DPS Central Communications Center	Utah State Police Dispatch	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
DPS Central Communications Center	Utah State Police Dispatch	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DPS Central Communications Center	Utah State Police Dispatch	emergency traffic control information	Existing	Status of a special traffic control strategy or system activation implemented in response to an emergency traffic control request, a request for emergency access routes, a request for evacuation, a request to activate closure systems, a request to employ driver information systems to support public safety objectives, or other special requests. Identifies the selected traffic control strategy and system control status.
DPS Central Communications Center	Utah State Police Dispatch	evacuation coordination	Planned	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Central Communications Center	Utah State Police Dispatch	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DPS Central Communications Center	Utah State Police Dispatch	incident information	Existing	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
DPS Central Communications Center	Utah State Police Dispatch	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DPS Central Communications Center	Utah State Police Dispatch	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DPS Central Communications Center	Utah State Police Dispatch	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DPS Central Communications Center	Utah State Police Dispatch	resource deployment status	Planned	Status of resource deployment identifying the resources (vehicles, equipment, materials, and personnel) available and their current status. General resource inventory information and specific status of deployed resources may be included.
DPS Central Communications Center	Utah State Police Dispatch	road network conditions	Existing	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.
DPS Central Communications Center	Utah State Police Dispatch	road network status assessment	Planned	Assessment of damage sustained by the road network including location and extent of the damage, estimate of remaining capacity, required closures, alternate routes, necessary restrictions, and time frame for repair and recovery.
DPS Central Communications Center	Utah State Police Dispatch	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Central Communications Center	Utah State Police Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DPS Central Communications Center	Utah Statewide TMC	emergency traffic coordination	Existing	Coordination supporting disaster response including evacuation and reentry. Includes coordination of special traffic control strategies that support efficient evacuation and reentry while protecting and optimizing movement of response vehicles and other resources responding to the emergency.
DPS Central Communications Center	Wide Area Alerting Systems	alert notification	Planned	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
DPS Central Communications Center	Wide Area Alerting Systems	evacuation information	Planned	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
DPS Central Communications Center	Wide Area Alerting Systems	incident information for public	Planned	Report of current desensitized incident information prepared for public dissemination.
DPS Central Communications Center	Wide Area Alerting Systems	road network conditions	Planned	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.
DPS Central Communications Center	Wide Area Alerting Systems	traffic images	Planned	High fidelity, real-time traffic images suitable for surveillance monitoring by the operator or for use in machine vision applications. This flow includes the images. Meta data that describes the images is contained in another flow.
DPS Central Communications Center	Wide Area Alerting Systems	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DPS Commercial Vehicle Enforcement	ADOT ECD CVO Administration Center	accident report	Planned	Report of commercial vehicle safety accident. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	ADOT ECD CVO Administration Center	carrier participation report	Planned	Report that summarizes motor carrier participation in CVO programs. Used to identify the level of active participation and to report which enrolled carriers are not participating as expected.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Commercial Vehicle Enforcement	ADOT ECD CVO Administration Center	citation	Planned	Report of commercial vehicle citation. The citation includes references to the statute(s) that was (were) violated. It includes information on the violator and the officer issuing the citation. A citation differs from a violation because it is adjudicated by the courts. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	ADOT ECD CVO Administration Center	commercial vehicle permit information	Planned	Information for commercial vehicle permits for oversize, overweight, or for dangerous goods. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	ADOT ECD CVO Administration Center	credential fee coordination	Planned	Description of fees, taxes and similar charges related to commercial vehicle credentials. In US and Canada, this includes rates for credentials that are exchanged between agencies via IRP, IFTA, etc.
DPS Commercial Vehicle Enforcement	ADOT ECD CVO Administration Center	credentials information	Planned	Response containing full vehicle fuel tax and registration credentials information. "Response" may be provided in reaction to a real-time query or a standing request for updated information. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	ADOT ECD CVO Administration Center	credentials status information	Planned	Credentials information such as registration, licensing, insurance, check flags, and electronic screening enrollment data. A unique identifier is included. Corresponds to the credentials portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	ADOT ECD CVO Administration Center	cv driver record	Planned	Information typically maintained by a state driver licensing agency about a driver of a commercial vehicle including driver identification data, license data, permit data, and driving history details. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	ADOT ECD CVO Administration Center	information on violators	Planned	Information on violators provided by a law enforcement agency. May include information about commercial vehicle violations or other kinds of violations associated with the particular entity. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	ADOT ECD CVO Administration Center	route restrictions	Planned	Information about routes, road segments, and areas that do not allow the transport of security sensitive hazmat cargoes or include other restrictions (such as height or weight limits).
DPS Commercial Vehicle Enforcement	ADOT ECD CVO Administration Center	safety inspection report	Planned	Report containing results of commercial vehicle safety inspection. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Commercial Vehicle Enforcement	ADOT ECD CVO Administration Center	safety status information	Planned	Safety information such as safety ratings, security ratings or flags, inspection summaries, and violation summaries. A unique identifier is included. Corresponds to the safety and security portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	ADOT ECD CVO Administration Center	targeted list	Planned	List of carriers, drivers, and/or vehicles of interest for enforcement purposes.
DPS Commercial Vehicle Enforcement	ADOT ECD CVO Administration Center	trigger area definition	Planned	Information that defines the desired trigger area for wireless roadside inspection safety data message submission.
DPS Commercial Vehicle Enforcement	ADOT ECD CVO Administration Center	trigger control	Planned	Controls to enable or disable a particular trigger.
DPS Commercial Vehicle Enforcement	ADOT Electronic Bypass Stations	commercial vehicle permit information	Existing	Information for commercial vehicle permits for oversize, overweight, or for dangerous goods. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	ADOT Electronic Bypass Stations	credentials information	Planned	Response containing full vehicle fuel tax and registration credentials information. "Response" may be provided in reaction to a real-time query or a standing request for updated information. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	ADOT Electronic Bypass Stations	credentials status information	Existing	Credentials information such as registration, licensing, insurance, check flags, and electronic screening enrollment data. A unique identifier is included. Corresponds to the credentials portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	ADOT Electronic Bypass Stations	cv driver record	Existing	Information typically maintained by a state driver licensing agency about a driver of a commercial vehicle including driver identification data, license data, permit data, and driving history details. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	ADOT Electronic Bypass Stations	information on violators	Existing	Information on violators provided by a law enforcement agency. May include information about commercial vehicle violations or other kinds of violations associated with the particular entity. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	ADOT Electronic Bypass Stations	safety status information	Existing	Safety information such as safety ratings, security ratings or flags, inspection summaries, and violation summaries. A unique identifier is included. Corresponds to the safety and security portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Commercial Vehicle Enforcement	ADOT Electronic Bypass Stations	targeted list	Existing	List of carriers, drivers, and/or vehicles of interest for enforcement purposes.
DPS Commercial Vehicle Enforcement	ADOT Motor Vehicle Division (MVD) Database	commercial vehicle archive data	Planned	Information describing commercial vehicle travel and commodity flow characteristics. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
DPS Commercial Vehicle Enforcement	ADOT MVD Commercial Vehicle Administration	accident report	Planned	Report of commercial vehicle safety accident. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	ADOT MVD Commercial Vehicle Administration	border clearance status	Existing	Notification regarding the crossing status of commercial freight shipment scheduled to enter the U.S. Includes portions of border agency and transportation agency clearance results, as those results become available.
DPS Commercial Vehicle Enforcement	ADOT MVD Commercial Vehicle Administration	citation	Planned	Report of commercial vehicle citation. The citation includes references to the statute(s) that was (were) violated. It includes information on the violator and the officer issuing the citation. A citation differs from a violation because it is adjudicated by the courts. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	ADOT MVD Commercial Vehicle Administration	commercial vehicle permit information	Planned	Information for commercial vehicle permits for oversize, overweight, or for dangerous goods. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	ADOT MVD Commercial Vehicle Administration	credential fee coordination	Planned	Description of fees, taxes and similar charges related to commercial vehicle credentials. In US and Canada, this includes rates for credentials that are exchanged between agencies via IRP, IFTA, etc.
DPS Commercial Vehicle Enforcement	ADOT MVD Commercial Vehicle Administration	credentials information	Existing	Response containing full vehicle fuel tax and registration credentials information. "Response" may be provided in reaction to a real-time query or a standing request for updated information. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	ADOT MVD Commercial Vehicle Administration	credentials status information	Existing	Credentials information such as registration, licensing, insurance, check flags, and electronic screening enrollment data. A unique identifier is included. Corresponds to the credentials portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	ADOT MVD Commercial Vehicle Administration	cv driver record	Planned	Information typically maintained by a state driver licensing agency about a driver of a commercial vehicle including driver identification data, license data, permit data, and driving history details. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	ADOT MVD Commercial Vehicle Administration	information on violators	Planned	Information on violators provided by a law enforcement agency. May include information about commercial vehicle violations or other kinds of violations associated with the particular entity. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Commercial Vehicle Enforcement	ADOT MVD Commercial Vehicle Administration	route restrictions	Planned	Information about routes, road segments, and areas that do not allow the transport of security sensitive hazmat cargoes or include other restrictions (such as height or weight limits).
DPS Commercial Vehicle Enforcement	ADOT MVD Commercial Vehicle Administration	safety inspection report	Existing	Report containing results of commercial vehicle safety inspection. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	ADOT MVD Commercial Vehicle Administration	safety status information	Existing	Safety information such as safety ratings, security ratings or flags, inspection summaries, and violation summaries. A unique identifier is included. Corresponds to the safety and security portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	ADOT MVD Commercial Vehicle Administration	targeted list	Existing	List of carriers, drivers, and/or vehicles of interest for enforcement purposes.
DPS Commercial Vehicle Enforcement	ADOT MVD Commercial Vehicle Administration	trigger area definition	Planned	Information that defines the desired trigger area for wireless roadside inspection safety data message submission.
DPS Commercial Vehicle Enforcement	ADOT MVD Commercial Vehicle Administration	trigger control	Planned	Controls to enable or disable a particular trigger.
DPS Commercial Vehicle Enforcement	ADOT WIM Stations	commercial vehicle permit information	Existing	Information for commercial vehicle permits for oversize, overweight, or for dangerous goods. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	ADOT WIM Stations	credentials information	Existing	Response containing full vehicle fuel tax and registration credentials information. "Response" may be provided in reaction to a real-time query or a standing request for updated information. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	ADOT WIM Stations	credentials status information	Existing	Credentials information such as registration, licensing, insurance, check flags, and electronic screening enrollment data. A unique identifier is included. Corresponds to the credentials portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	ADOT WIM Stations	cv driver record	Existing	Information typically maintained by a state driver licensing agency about a driver of a commercial vehicle including driver identification data, license data, permit data, and driving history details. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	ADOT WIM Stations	information on violators	Existing	Information on violators provided by a law enforcement agency. May include information about commercial vehicle violations or other kinds of violations associated with the particular entity. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Commercial Vehicle Enforcement	ADOT WIM Stations	safety status information	Existing	Safety information such as safety ratings, security ratings or flags, inspection summaries, and violation summaries. A unique identifier is included. Corresponds to the safety and security portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	ADOT WIM Stations	targeted list	Existing	List of carriers, drivers, and/or vehicles of interest for enforcement purposes.
DPS Commercial Vehicle Enforcement	Commercial Vehicle Driver and Vehicle Verification Systems	accident report	Planned	Report of commercial vehicle safety accident. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	Commercial Vehicle Driver and Vehicle Verification Systems	border clearance status	Existing	Notification regarding the crossing status of commercial freight shipment scheduled to enter the U.S. Includes portions of border agency and transportation agency clearance results, as those results become available.
DPS Commercial Vehicle Enforcement	Commercial Vehicle Driver and Vehicle Verification Systems	citation	Planned	Report of commercial vehicle citation. The citation includes references to the statute(s) that was (were) violated. It includes information on the violator and the officer issuing the citation. A citation differs from a violation because it is adjudicated by the courts. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	Commercial Vehicle Driver and Vehicle Verification Systems	commercial vehicle archive data	Existing	Information describing commercial vehicle travel and commodity flow characteristics. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
DPS Commercial Vehicle Enforcement	Commercial Vehicle Driver and Vehicle Verification Systems	commercial vehicle permit information	Planned	Information for commercial vehicle permits for oversize, overweight, or for dangerous goods. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	Commercial Vehicle Driver and Vehicle Verification Systems	credential fee coordination	Planned	Description of fees, taxes and similar charges related to commercial vehicle credentials. In US and Canada, this includes rates for credentials that are exchanged between agencies via IRP, IFTA, etc.
DPS Commercial Vehicle Enforcement	Commercial Vehicle Driver and Vehicle Verification Systems	credentials information	Existing	Response containing full vehicle fuel tax and registration credentials information. "Response" may be provided in reaction to a real-time query or a standing request for updated information. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	Commercial Vehicle Driver and Vehicle Verification Systems	credentials status information	Existing	Credentials information such as registration, licensing, insurance, check flags, and electronic screening enrollment data. A unique identifier is included. Corresponds to the credentials portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Commercial Vehicle Enforcement	Commercial Vehicle Driver and Vehicle Verification Systems	cv driver record	Planned	Information typically maintained by a state driver licensing agency about a driver of a commercial vehicle including driver identification data, license data, permit data, and driving history details. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	Commercial Vehicle Driver and Vehicle Verification Systems	information on violators	Planned	Information on violators provided by a law enforcement agency. May include information about commercial vehicle violations or other kinds of violations associated with the particular entity. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	Commercial Vehicle Driver and Vehicle Verification Systems	route restrictions	Planned	Information about routes, road segments, and areas that do not allow the transport of security sensitive hazmat cargoes or include other restrictions (such as height or weight limits).
DPS Commercial Vehicle Enforcement	Commercial Vehicle Driver and Vehicle Verification Systems	safety status information	Existing	Safety information such as safety ratings, security ratings or flags, inspection summaries, and violation summaries. A unique identifier is included. Corresponds to the safety and security portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	Commercial Vehicle Driver and Vehicle Verification Systems	targeted list	Existing	List of carriers, drivers, and/or vehicles of interest for enforcement purposes.
DPS Commercial Vehicle Enforcement	Commercial Vehicle Driver and Vehicle Verification Systems	trigger area definition	Planned	Information that defines the desired trigger area for wireless roadside inspection safety data message submission.
DPS Commercial Vehicle Enforcement	Commercial Vehicle Driver and Vehicle Verification Systems	trigger control	Planned	Controls to enable or disable a particular trigger.
DPS Commercial Vehicle Enforcement	Commercial Vehicles	safety inspection record	Planned	Record containing results of commercial vehicle safety inspection.
DPS Commercial Vehicle Enforcement	DEMA Data Archive	commercial vehicle archive data	Planned	Information describing commercial vehicle travel and commodity flow characteristics. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
DPS Commercial Vehicle Enforcement	DPS Data Archive	commercial vehicle archive data	Existing	Information describing commercial vehicle travel and commodity flow characteristics. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
DPS Commercial Vehicle Enforcement	DPS Roadside Safety Inspection	accident report	Existing	Report of commercial vehicle safety accident. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	DPS Roadside Safety Inspection	carrier participation report	Existing	Report that summarizes motor carrier participation in CVO programs. Used to identify the level of active participation and to report which enrolled carriers are not participating as expected.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Commercial Vehicle Enforcement	DPS Roadside Safety Inspection	citation	Existing	Report of commercial vehicle citation. The citation includes references to the statute(s) that was (were) violated. It includes information on the violator and the officer issuing the citation. A citation differs from a violation because it is adjudicated by the courts. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	DPS Roadside Safety Inspection	commercial vehicle permit information	Existing	Information for commercial vehicle permits for oversize, overweight, or for dangerous goods. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	DPS Roadside Safety Inspection	commercial vehicle violation notification	Existing	Notification of a violation. The violation notification flow describes the statute or regulation that was violated and how it was violated (e. g., overweight on specific axle by xxx pounds or which brake was out of adjustment and how far out of adjustment it was). A violation differs from a citation because it is not adjudicated by the courts. It specifically includes the date/time and location of the violation and identification of the vehicle, driver, and associated equipment/cargo.
DPS Commercial Vehicle Enforcement	DPS Roadside Safety Inspection	credentials information	Existing	Response containing full vehicle fuel tax and registration credentials information. "Response" may be provided in reaction to a real-time query or a standing request for updated information. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	DPS Roadside Safety Inspection	credentials status information	Existing	Credentials information such as registration, licensing, insurance, check flags, and electronic screening enrollment data. A unique identifier is included. Corresponds to the credentials portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	DPS Roadside Safety Inspection	cv driver record	Existing	Information typically maintained by a state driver licensing agency about a driver of a commercial vehicle including driver identification data, license data, permit data, and driving history details. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	DPS Roadside Safety Inspection	daily site activity data	Existing	Record of daily activities at commercial vehicle check stations including summaries of screening events and inspections.
DPS Commercial Vehicle Enforcement	DPS Roadside Safety Inspection	information on violators	Existing	Information on violators provided by a law enforcement agency. May include information about commercial vehicle violations or other kinds of violations associated with the particular entity. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	DPS Roadside Safety Inspection	safety inspection report	Existing	Report containing results of commercial vehicle safety inspection. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Commercial Vehicle Enforcement	DPS Roadside Safety Inspection	safety status information	Existing	Safety information such as safety ratings, security ratings or flags, inspection summaries, and violation summaries. A unique identifier is included. Corresponds to the safety and security portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	DPS Roadside Safety Inspection	targeted list	Existing	List of carriers, drivers, and/or vehicles of interest for enforcement purposes.
DPS Commercial Vehicle Enforcement	Financial Institution	payment request	Planned	Request for payment from financial institution or related financial service requests (e.g., balance inquiry)
DPS Commercial Vehicle Enforcement	Fleet Management Systems	border clearance status	Existing	Notification regarding the crossing status of commercial freight shipment scheduled to enter the U.S. Includes portions of border agency and transportation agency clearance results, as those results become available.
DPS Commercial Vehicle Enforcement	Fleet Management Systems	citation	Planned	Report of commercial vehicle citation. The citation includes references to the statute(s) that was (were) violated. It includes information on the violator and the officer issuing the citation. A citation differs from a violation because it is adjudicated by the courts. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	Fleet Management Systems	commercial vehicle permit	Planned	Commercial vehicle permits including those for oversize, overweight, or hazmat shipments.
DPS Commercial Vehicle Enforcement	Fleet Management Systems	compliance review report	Planned	Report containing results of carrier compliance review, including concomitant out-of-service notifications, carrier warnings/notifications. The information may be provided as a response to a real-time query of proactively by the source. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	Fleet Management Systems	credentials information	Planned	Response containing full vehicle fuel tax and registration credentials information. "Response" may be provided in reaction to a real-time query or a standing request for updated information. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	Fleet Management Systems	credentials status information	Planned	Credentials information such as registration, licensing, insurance, check flags, and electronic screening enrollment data. A unique identifier is included. Corresponds to the credentials portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	Fleet Management Systems	cv driver record	Planned	Information typically maintained by a state driver licensing agency about a driver of a commercial vehicle including driver identification data, license data, permit data, and driving history details. The query flow is not explicitly shown.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Commercial Vehicle Enforcement	Fleet Management Systems	route restrictions	Planned	Information about routes, road segments, and areas that do not allow the transport of security sensitive hazmat cargoes or include other restrictions (such as height or weight limits).
DPS Commercial Vehicle Enforcement	Fleet Management Systems	safety status information	Planned	Safety information such as safety ratings, security ratings or flags, inspection summaries, and violation summaries. A unique identifier is included. Corresponds to the safety and security portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	Fleet Management Systems	trigger area	Planned	A geographic area a commercial motor vehicle crosses into, which initiates a request to compile and transmit a safety data message. May be associated with a time period.
DPS Commercial Vehicle Enforcement	Fleet Management Systems	trigger area notification	Planned	Notification to activate wireless roadside inspection safety data message collection.
DPS Commercial Vehicle Enforcement	Freight Shipping System	border clearance status	Existing	Notification regarding the crossing status of commercial freight shipment scheduled to enter the U.S. Includes portions of border agency and transportation agency clearance results, as those results become available.
DPS Commercial Vehicle Enforcement	International Fuel Tax Agreement (IFTA) Clearinghouse	accident report	Planned	Report of commercial vehicle safety accident. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	International Fuel Tax Agreement (IFTA) Clearinghouse	border clearance status	Existing	Notification regarding the crossing status of commercial freight shipment scheduled to enter the U.S. Includes portions of border agency and transportation agency clearance results, as those results become available.
DPS Commercial Vehicle Enforcement	International Fuel Tax Agreement (IFTA) Clearinghouse	citation	Planned	Report of commercial vehicle citation. The citation includes references to the statute(s) that was (were) violated. It includes information on the violator and the officer issuing the citation. A citation differs from a violation because it is adjudicated by the courts. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	International Fuel Tax Agreement (IFTA) Clearinghouse	commercial vehicle permit information	Planned	Information for commercial vehicle permits for oversize, overweight, or for dangerous goods. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	International Fuel Tax Agreement (IFTA) Clearinghouse	credential fee coordination	Planned	Description of fees, taxes and similar charges related to commercial vehicle credentials. In US and Canada, this includes rates for credentials that are exchanged between agencies via IRP, IFTA, etc.
DPS Commercial Vehicle Enforcement	International Fuel Tax Agreement (IFTA) Clearinghouse	credentials information	Existing	Response containing full vehicle fuel tax and registration credentials information. "Response" may be provided in reaction to a real-time query or a standing request for updated information. The query flow is not explicitly shown.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Commercial Vehicle Enforcement	International Fuel Tax Agreement (IFTA) Clearinghouse	credentials status information	Existing	Credentials information such as registration, licensing, insurance, check flags, and electronic screening enrollment data. A unique identifier is included. Corresponds to the credentials portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	International Fuel Tax Agreement (IFTA) Clearinghouse	cv driver record	Planned	Information typically maintained by a state driver licensing agency about a driver of a commercial vehicle including driver identification data, license data, permit data, and driving history details. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	International Fuel Tax Agreement (IFTA) Clearinghouse	information on violators	Planned	Information on violators provided by a law enforcement agency. May include information about commercial vehicle violations or other kinds of violations associated with the particular entity. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	International Fuel Tax Agreement (IFTA) Clearinghouse	route restrictions	Planned	Information about routes, road segments, and areas that do not allow the transport of security sensitive hazmat cargoes or include other restrictions (such as height or weight limits).
DPS Commercial Vehicle Enforcement	International Fuel Tax Agreement (IFTA) Clearinghouse	safety status information	Existing	Safety information such as safety ratings, security ratings or flags, inspection summaries, and violation summaries. A unique identifier is included. Corresponds to the safety and security portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	International Fuel Tax Agreement (IFTA) Clearinghouse	targeted list	Existing	List of carriers, drivers, and/or vehicles of interest for enforcement purposes.
DPS Commercial Vehicle Enforcement	International Fuel Tax Agreement (IFTA) Clearinghouse	trigger area definition	Planned	Information that defines the desired trigger area for wireless roadside inspection safety data message submission.
DPS Commercial Vehicle Enforcement	International Fuel Tax Agreement (IFTA) Clearinghouse	trigger control	Planned	Controls to enable or disable a particular trigger.
DPS Commercial Vehicle Enforcement	International Registration Plan (IRP) Clearinghouse	accident report	Planned	Report of commercial vehicle safety accident. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Commercial Vehicle Enforcement	International Registration Plan (IRP) Clearinghouse	citation	Planned	Report of commercial vehicle citation. The citation includes references to the statute(s) that was (were) violated. It includes information on the violator and the officer issuing the citation. A citation differs from a violation because it is adjudicated by the courts. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	International Registration Plan (IRP) Clearinghouse	commercial vehicle permit information	Planned	Information for commercial vehicle permits for oversize, overweight, or for dangerous goods. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	International Registration Plan (IRP) Clearinghouse	credential fee coordination	Planned	Description of fees, taxes and similar charges related to commercial vehicle credentials. In US and Canada, this includes rates for credentials that are exchanged between agencies via IRP, IFTA, etc.
DPS Commercial Vehicle Enforcement	International Registration Plan (IRP) Clearinghouse	credentials information	Existing	Response containing full vehicle fuel tax and registration credentials information. "Response" may be provided in reaction to a real-time query or a standing request for updated information. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	International Registration Plan (IRP) Clearinghouse	credentials status information	Existing	Credentials information such as registration, licensing, insurance, check flags, and electronic screening enrollment data. A unique identifier is included. Corresponds to the credentials portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	International Registration Plan (IRP) Clearinghouse	cv driver record	Planned	Information typically maintained by a state driver licensing agency about a driver of a commercial vehicle including driver identification data, license data, permit data, and driving history details. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	International Registration Plan (IRP) Clearinghouse	information on violators	Planned	Information on violators provided by a law enforcement agency. May include information about commercial vehicle violations or other kinds of violations associated with the particular entity. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	International Registration Plan (IRP) Clearinghouse	route restrictions	Planned	Information about routes, road segments, and areas that do not allow the transport of security sensitive hazmat cargoes or include other restrictions (such as height or weight limits).
DPS Commercial Vehicle Enforcement	International Registration Plan (IRP) Clearinghouse	safety status information	Existing	Safety information such as safety ratings, security ratings or flags, inspection summaries, and violation summaries. A unique identifier is included. Corresponds to the safety and security portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	International Registration Plan (IRP) Clearinghouse	targeted list	Existing	List of carriers, drivers, and/or vehicles of interest for enforcement purposes.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Commercial Vehicle Enforcement	International Registration Plan (IRP) Clearinghouse	trigger area definition	Planned	Information that defines the desired trigger area for wireless roadside inspection safety data message submission.
DPS Commercial Vehicle Enforcement	International Registration Plan (IRP) Clearinghouse	trigger control	Planned	Controls to enable or disable a particular trigger.
DPS Commercial Vehicle Enforcement	POE Data Archive	commercial vehicle archive data	Planned	Information describing commercial vehicle travel and commodity flow characteristics. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
DPS Commercial Vehicle Enforcement	Safety Fitness Electronic Record (SAFER)	accident report	Existing	Report of commercial vehicle safety accident. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	Safety Fitness Electronic Record (SAFER)	citation	Existing	Report of commercial vehicle citation. The citation includes references to the statute(s) that was (were) violated. It includes information on the violator and the officer issuing the citation. A citation differs from a violation because it is adjudicated by the courts. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	Safety Fitness Electronic Record (SAFER)	commercial vehicle permit information	Existing	Information for commercial vehicle permits for oversize, overweight, or for dangerous goods. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	Safety Fitness Electronic Record (SAFER)	commercial vehicle violation notification	Existing	Notification of a violation. The violation notification flow describes the statute or regulation that was violated and how it was violated (e. g., overweight on specific axle by xxx pounds or which brake was out of adjustment and how far out of adjustment it was). A violation differs from a citation because it is not adjudicated by the courts. It specifically includes the date/time and location of the violation and identification of the vehicle, driver, and associated equipment/cargo.
DPS Commercial Vehicle Enforcement	Safety Fitness Electronic Record (SAFER)	credentials information	Existing	Response containing full vehicle fuel tax and registration credentials information. "Response" may be provided in reaction to a real-time query or a standing request for updated information. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	Safety Fitness Electronic Record (SAFER)	credentials status information	Existing	Credentials information such as registration, licensing, insurance, check flags, and electronic screening enrollment data. A unique identifier is included. Corresponds to the credentials portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	Safety Fitness Electronic Record (SAFER)	daily site activity data	Existing	Record of daily activities at commercial vehicle check stations including summaries of screening events and inspections.
DPS Commercial Vehicle Enforcement	Safety Fitness Electronic Record (SAFER)	safety inspection report	Existing	Report containing results of commercial vehicle safety inspection. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Commercial Vehicle Enforcement	Safety Fitness Electronic Record (SAFER)	safety status information	Existing	Safety information such as safety ratings, security ratings or flags, inspection summaries, and violation summaries. A unique identifier is included. Corresponds to the safety and security portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
DPS Commercial Vehicle Enforcement	Safety Fitness Electronic Record (SAFER)	targeted list	Existing	List of carriers, drivers, and/or vehicles of interest for enforcement purposes.
DPS Commercial Vehicle Enforcement	Safety Fitness Electronic Record (SAFER)	trigger area definition	Planned	Information that defines the desired trigger area for wireless roadside inspection safety data message submission.
DPS Commercial Vehicle Enforcement	Safety Fitness Electronic Record (SAFER)	trigger control	Planned	Controls to enable or disable a particular trigger.
DPS Console Interface (Other LE)	ADOT ECD Dispatch	alert notification coordination	Planned	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DPS Console Interface (Other LE)	ADOT ECD Dispatch	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DPS Console Interface (Other LE)	ADOT ECD Dispatch	evacuation coordination	Planned	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DPS Console Interface (Other LE)	ADOT ECD Dispatch	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DPS Console Interface (Other LE)	ADOT ECD Dispatch	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DPS Console Interface (Other LE)	ADOT ECD Dispatch	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DPS Console Interface (Other LE)	ADOT ECD Dispatch	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Console Interface (Other LE)	ADOT ECD Dispatch	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DPS Console Interface (Other LE)	ADOT ECD Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DPS Console Interface (Other LE)	ADOT HazMat Response Team	alert notification coordination	Planned	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DPS Console Interface (Other LE)	ADOT HazMat Response Team	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DPS Console Interface (Other LE)	ADOT HazMat Response Team	evacuation coordination	Planned	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DPS Console Interface (Other LE)	ADOT HazMat Response Team	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DPS Console Interface (Other LE)	ADOT HazMat Response Team	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DPS Console Interface (Other LE)	ADOT HazMat Response Team	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DPS Console Interface (Other LE)	ADOT HazMat Response Team	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DPS Console Interface (Other LE)	ADOT HazMat Response Team	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Console Interface (Other LE)	ADOT HazMat Response Team	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DPS Console Interface (Other LE)	ADOT TOC and EMC	alert notification coordination	Planned	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DPS Console Interface (Other LE)	ADOT TOC and EMC	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DPS Console Interface (Other LE)	ADOT TOC and EMC	evacuation coordination	Planned	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DPS Console Interface (Other LE)	ADOT TOC and EMC	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DPS Console Interface (Other LE)	ADOT TOC and EMC	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DPS Console Interface (Other LE)	ADOT TOC and EMC	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DPS Console Interface (Other LE)	ADOT TOC and EMC	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DPS Console Interface (Other LE)	ADOT TOC and EMC	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DPS Console Interface (Other LE)	ADOT TOC and EMC	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Console Interface (Other LE)	CHP Dispatch	alert notification coordination	Planned	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DPS Console Interface (Other LE)	CHP Dispatch	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DPS Console Interface (Other LE)	CHP Dispatch	evacuation coordination	Planned	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DPS Console Interface (Other LE)	CHP Dispatch	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DPS Console Interface (Other LE)	CHP Dispatch	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DPS Console Interface (Other LE)	CHP Dispatch	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DPS Console Interface (Other LE)	CHP Dispatch	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DPS Console Interface (Other LE)	CHP Dispatch	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DPS Console Interface (Other LE)	CHP Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DPS Console Interface (Other LE)	Cities and Towns Police and Fire Dispatch	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Console Interface (Other LE)	Cities and Towns Police and Fire Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DPS Console Interface (Other LE)	Cities and Towns Police and Fire Dispatch	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DPS Console Interface (Other LE)	Cities and Towns Police and Fire Dispatch	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DPS Console Interface (Other LE)	Cities and Towns Police and Fire Dispatch	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DPS Console Interface (Other LE)	Cities and Towns Police and Fire Dispatch	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. DPS Console Interface (Other LE)	Cities and Towns Police and Fire Dispatch	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DPS Console Interface (Other LE)	Cities and Towns Police and Fire Dispatch	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DPS Console Interface (Other LE)	Cities and Towns Police and Fire Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DPS Console Interface (Other LE)	DEMA SEOC Arizona DEM Military Affairs	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DPS Console Interface (Other LE)	DEMA SEOC Arizona DEM Military Affairs	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Console Interface (Other LE)	DEMA SEOC Arizona DEM Military Affairs	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DPS Console Interface (Other LE)	DEMA SEOC Arizona DEM Military Affairs	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DPS Console Interface (Other LE)	DEMA SEOC Arizona DEM Military Affairs	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DPS Console Interface (Other LE)	DEMA SEOC Arizona DEM Military Affairs	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DPS Console Interface (Other LE)	DEMA SEOC Arizona DEM Military Affairs	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DPS Console Interface (Other LE)	DEMA SEOC Arizona DEM Military Affairs	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DPS Console Interface (Other LE)	DEMA SEOC Arizona DEM Military Affairs	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DPS Console Interface (Other LE)	DPS Central Communications Center	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DPS Console Interface (Other LE)	DPS Central Communications Center	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DPS Console Interface (Other LE)	DPS Central Communications Center	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Console Interface (Other LE)	DPS Central Communications Center	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DPS Console Interface (Other LE)	DPS Central Communications Center	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DPS Console Interface (Other LE)	DPS Central Communications Center	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DPS Console Interface (Other LE)	DPS Central Communications Center	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DPS Console Interface (Other LE)	DPS Central Communications Center	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DPS Console Interface (Other LE)	DPS Central Communications Center	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DPS Console Interface (Other LE)	Maricopa County EOC	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DPS Console Interface (Other LE)	Maricopa County EOC	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DPS Console Interface (Other LE)	Maricopa County EOC	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DPS Console Interface (Other LE)	Maricopa County EOC	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DPS Console Interface (Other LE)	Maricopa County EOC	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Console Interface (Other LE)	Maricopa County EOC	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DPS Console Interface (Other LE)	Maricopa County EOC	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DPS Console Interface (Other LE)	Maricopa County EOC	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DPS Console Interface (Other LE)	Maricopa County EOC	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DPS Console Interface (Other LE)	Mexico Customs and Border Patrol	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DPS Console Interface (Other LE)	Mexico Customs and Border Patrol	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DPS Console Interface (Other LE)	Mexico Customs and Border Patrol	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DPS Console Interface (Other LE)	Mexico Customs and Border Patrol	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DPS Console Interface (Other LE)	Mexico Customs and Border Patrol	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DPS Console Interface (Other LE)	Mexico Customs and Border Patrol	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Console Interface (Other LE)	Mexico Customs and Border Patrol	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DPS Console Interface (Other LE)	Mexico Customs and Border Patrol	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DPS Console Interface (Other LE)	Mexico Customs and Border Patrol	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DPS Console Interface (Other LE)	Mexico Public Safety	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DPS Console Interface (Other LE)	Mexico Public Safety	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DPS Console Interface (Other LE)	Mexico Public Safety	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DPS Console Interface (Other LE)	Mexico Public Safety	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DPS Console Interface (Other LE)	Mexico Public Safety	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DPS Console Interface (Other LE)	Mexico Public Safety	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DPS Console Interface (Other LE)	Mexico Public Safety	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DPS Console Interface (Other LE)	Mexico Public Safety	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Console Interface (Other LE)	Mexico Public Safety	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DPS Console Interface (Other LE)	Nevada State Police Dispatch	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DPS Console Interface (Other LE)	Nevada State Police Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DPS Console Interface (Other LE)	Nevada State Police Dispatch	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DPS Console Interface (Other LE)	Nevada State Police Dispatch	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DPS Console Interface (Other LE)	Nevada State Police Dispatch	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DPS Console Interface (Other LE)	Nevada State Police Dispatch	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DPS Console Interface (Other LE)	Nevada State Police Dispatch	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DPS Console Interface (Other LE)	Nevada State Police Dispatch	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DPS Console Interface (Other LE)	Nevada State Police Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Console Interface (Other LE)	Tribal Public Safety Dispatch	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DPS Console Interface (Other LE)	Tribal Public Safety Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DPS Console Interface (Other LE)	Tribal Public Safety Dispatch	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DPS Console Interface (Other LE)	Tribal Public Safety Dispatch	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DPS Console Interface (Other LE)	Tribal Public Safety Dispatch	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DPS Console Interface (Other LE)	Tribal Public Safety Dispatch	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DPS Console Interface (Other LE)	Tribal Public Safety Dispatch	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DPS Console Interface (Other LE)	Tribal Public Safety Dispatch	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DPS Console Interface (Other LE)	Tribal Public Safety Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DPS Console Interface (Other LE)	US Border Patrol Dispatch	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Console Interface (Other LE)	US Border Patrol Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DPS Console Interface (Other LE)	US Border Patrol Dispatch	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DPS Console Interface (Other LE)	US Border Patrol Dispatch	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DPS Console Interface (Other LE)	US Border Patrol Dispatch	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DPS Console Interface (Other LE)	US Border Patrol Dispatch	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DPS Console Interface (Other LE)	US Border Patrol Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DPS Data Archive	ADOT AZ Crash Information System (ACIS)	archived data products	Planned	Raw or processed data, meta data, data catalogs and other data products provided to a user system upon request. The response may also include any associated transaction information.
DPS Data Archive	ADOT HPMS Data Archive	archive coordination	Planned	Catalog data, meta data, published data, and other information exchanged between archives to support data synchronization and satisfy user data requests.
DPS Data Archive	ADOT Incident Response Unit (IRU)	archive status	Existing	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
DPS Data Archive	ADOT TOC Data User System	archive analysis results	Planned	Processed information products, supporting meta data, and any associated transaction information resulting from data mining, analytical processing, aggregation or summarization, report formulation, or other on-line processing and analysis of archived data.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Data Archive	ADOT TOC Data User System	archive request confirmation	Planned	Confirmation that an archive request has been received and processed with information on the disposition of the request.
DPS Data Archive	ADOT TOC Data User System	archived data products	Planned	Raw or processed data, meta data, data catalogs and other data products provided to a user system upon request. The response may also include any associated transaction information.
DPS Data Archive	Archive Data Users	archive analysis results	Existing	Processed information products, supporting meta data, and any associated transaction information resulting from data mining, analytical processing, aggregation or summarization, report formulation, or other on-line processing and analysis of archived data.
DPS Data Archive	Archive Data Users	archive request confirmation	Existing	Confirmation that an archive request has been received and processed with information on the disposition of the request.
DPS Data Archive	Archive Data Users	archived data products	Existing	Raw or processed data, meta data, data catalogs and other data products provided to a user system upon request. The response may also include any associated transaction information.
DPS Data Archive	DEMA Data Archive	archive coordination	Planned	Catalog data, meta data, published data, and other information exchanged between archives to support data synchronization and satisfy user data requests.
DPS Data Archive	DEMA Data User Systems	archived data products	Planned	Raw or processed data, meta data, data catalogs and other data products provided to a user system upon request. The response may also include any associated transaction information.
DPS Data Archive	DPS Central Communications Center	archive status	Existing	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
DPS Data Archive	DPS Commercial Vehicle Enforcement	archive status	Existing	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
DPS Data Archive	DPS Data User Systems	archived data products	Existing	Raw or processed data, meta data, data catalogs and other data products provided to a user system upon request. The response may also include any associated transaction information.
DPS Data Archive	International Fuel Tax Agreement (IFTA) Clearinghouse	archive status	Existing	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
DPS Data Archive	MAG Data User Systems	archived data products	Planned	Raw or processed data, meta data, data catalogs and other data products provided to a user system upon request. The response may also include any associated transaction information.
DPS Data Archive	Mexico Customs and Border Patrol	archive status	Existing	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Data Archive	Mexico Public Safety	archive status	Existing	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
DPS Data Archive	NOAA _National Weather Service	archive status	Planned	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
DPS Data Archive	PAG Planning Traffic Database	archive coordination	Planned	Catalog data, meta data, published data, and other information exchanged between archives to support data synchronization and satisfy user data requests.
DPS Data Archive	POE Administration Center	archive status	Planned	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
DPS Data Archive	POE Data Archive	archive coordination	Planned	Catalog data, meta data, published data, and other information exchanged between archives to support data synchronization and satisfy user data requests.
DPS Data Archive	Safety Fitness Electronic Record (SAFER)	archive status	Existing	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
DPS Data Archive	Tribal Data Archive	archive coordination	Existing	Catalog data, meta data, published data, and other information exchanged between archives to support data synchronization and satisfy user data requests.
DPS Data Archive	Tribal Public Safety Dispatch	archive status	Existing	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
DPS Data Archive	Wide Area Alerting Systems	archive status	Planned	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
DPS Data User Systems	DEMA Data Archive	archived data product requests	Planned	A user-specified request for archived data products (i.e., data, meta data, or data catalogs). The request also includes information that is used to identify and authenticate the user and support electronic payment requirements, if any.
DPS Data User Systems	DPS Data Archive	archived data product requests	Existing	A user-specified request for archived data products (i.e., data, meta data, or data catalogs). The request also includes information that is used to identify and authenticate the user and support electronic payment requirements, if any.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS HazMat Team	ADOT HazMat Response Team	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
DPS HazMat Team	ADOT HazMat Response Team	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DPS HazMat Team	ADOT HazMat Response Team	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DPS HazMat Team	ADOT Incident Response Unit (IRU)	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DPS HazMat Team	ADOT Incident Response Unit (IRU)	incident command information coordination	Existing	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DPS HazMat Team	ADOT Incident Response Unit (IRU)	incident information	Existing	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
DPS HazMat Team	ADOT Incident Response Unit (IRU)	incident response coordination	Existing	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS HazMat Team	ADOT Incident Response Unit (IRU)	incident response status	Existing	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
DPS HazMat Team	ADOT Incident Response Unit (IRU)	resource coordination	Existing	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DPS HazMat Team	DEMA CRT - HazMat Response Team	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DPS HazMat Team	DEMA CRT - HazMat Response Team	incident command information coordination	Existing	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
DPS HazMat Team	DEMA CRT - HazMat Response Team	incident information	Existing	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
DPS HazMat Team	DEMA CRT - HazMat Response Team	incident response coordination	Existing	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DPS HazMat Team	DEMA CRT - HazMat Response Team	incident response status	Existing	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
DPS HazMat Team	DEMA CRT - HazMat Response Team	resource coordination	Existing	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DPS HazMat Team	DEMA CRT - HazMat Response Team	resource request	Existing	A request for resources to implement special traffic control measures, assist in clean up, verify an incident, etc. The request may poll for resource availability or request pre-staging, staging, or immediate deployment of resources. Resources may be explicitly requested or a service may be requested and the specific resource deployment may be determined by the responding agency.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS HazMat Team	Railroad Operations Center	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DPS Network Operations Center - NOC	ADOT TOC and EMC	alert notification	Planned	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
DPS Network Operations Center - NOC	ADOT TOC and EMC	alert notification coordination	Planned	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
DPS Network Operations Center - NOC	ADOT TOC and EMC	device control request	Planned	Request for device control action
DPS Network Operations Center - NOC	ADOT TOC and EMC	device data	Planned	Data from detectors, environmental sensor stations, roadside equipment, and traffic control devices, including device inventory information.
DPS Network Operations Center - NOC	ADOT TOC and EMC	device status	Planned	Status information from devices
DPS Network Operations Center - NOC	ADOT TOC and EMC	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
DPS Network Operations Center - NOC	ADOT TOC and EMC	emergency traffic control request	Planned	Special request to preempt the current traffic control strategy in effect at one or more signalized intersections or highway segments, activate traffic control and closure systems such as gates and barriers, activate safeguard systems, or use driver information systems. For example, this flow can request all signals to red-flash, request a progression of traffic control preemptions along an emergency vehicle route, request a specific evacuation traffic control plan, request activation of a road closure barrier system, or place a public safety or emergency-related message on a dynamic message sign.
DPS Network Operations Center - NOC	ADOT TOC and EMC	evacuation coordination	Planned	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
DPS Network Operations Center - NOC	ADOT TOC and EMC	evacuation information	Planned	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
DPS Network Operations Center - NOC	ADOT TOC and EMC	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Network Operations Center - NOC	ADOT TOC and EMC	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
DPS Network Operations Center - NOC	ADOT TOC and EMC	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
DPS Network Operations Center - NOC	ADOT TOC and EMC	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
DPS Network Operations Center - NOC	ADOT TOC and EMC	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
DPS Network Operations Center - NOC	ADOT TOC and EMC	remote surveillance control	Planned	The control commands used to remotely operate another center's sensors or surveillance equipment so that roadside surveillance assets can be shared by more than one agency.
DPS Network Operations Center - NOC	ADOT TOC and EMC	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
DPS Network Operations Center - NOC	ADOT TOC and EMC	resource deployment status	Planned	Status of resource deployment identifying the resources (vehicles, equipment, materials, and personnel) available and their current status. General resource inventory information and specific status of deployed resources may be included.
DPS Network Operations Center - NOC	ADOT TOC and EMC	resource request	Planned	A request for resources to implement special traffic control measures, assist in clean up, verify an incident, etc. The request may poll for resource availability or request pre-staging, staging, or immediate deployment of resources. Resources may be explicitly requested or a service may be requested and the specific resource deployment may be determined by the responding agency.
DPS Network Operations Center - NOC	ADOT TOC and EMC	road network conditions	Planned	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.
DPS Network Operations Center - NOC	ADOT TOC and EMC	threat information	Planned	Threats regarding transportation infrastructure, facilities, or systems detected by a variety of methods (sensors, surveillance, threat analysis of advisories from outside agencies, etc.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Network Operations Center - NOC	ADOT TOC and EMC	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
DPS Network Operations Center - NOC	ADOT TOC and EMC	traffic image meta data	Planned	Meta data that describes traffic images. Traffic images (video) are in another flow.
DPS Network Operations Center - NOC	ADOT TOC and EMC	traffic images	Planned	High fidelity, real-time traffic images suitable for surveillance monitoring by the operator or for use in machine vision applications. This flow includes the images. Meta data that describes the images is contained in another flow.
DPS Network Operations Center - NOC	ADOT TOC and EMC	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
DPS RMA Vehicles	ADOT CV Roadside Equipment	local signal preemption request	Planned	Direct control signal or message to a signalized intersection that results in preemption of the current control plan and grants right-of-way to the requesting vehicle.
DPS RMA Vehicles	ADOT CV Roadside Equipment	vehicle location and motion	Planned	Data describing the vehicle's location in three dimensions, heading, speed, acceleration, braking status, and size.
DPS RMA Vehicles	DPS Central Communications Center	emergency dispatch response	Existing	Request for additional emergency dispatch information and provision of en route status.
DPS RMA Vehicles	DPS Central Communications Center	emergency vehicle tracking data	Existing	The current location and operating status of the emergency vehicle.
DPS RMA Vehicles	DPS Central Communications Center	incident scene status	Planned	Information gathered at the incident site that more completely characterizes the incident and provides current incident response status.
DPS RMA Vehicles	DPS Central Communications Center	service patrol dispatch response	Existing	Request for additional dispatch information and provision of en route status.
DPS RMA Vehicles	DPS Central Communications Center	service patrol incident status	Existing	Information gathered at the incident site by a service patrol vehicle that more completely characterizes the incident, the services provided, and clearance status.
DPS Roadside Safety Inspection	ADOT ECD CVO Administration Center	accident report	Planned	Report of commercial vehicle safety accident. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
DPS Roadside Safety Inspection	ADOT ECD CVO Administration Center	citation	Planned	Report of commercial vehicle citation. The citation includes references to the statute(s) that was (were) violated. It includes information on the violator and the officer issuing the citation. A citation differs from a violation because it is adjudicated by the courts. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Roadside Safety Inspection	ADOT ECD CVO Administration Center	commercial vehicle violation notification	Planned	Notification of a violation. The violation notification flow describes the statute or regulation that was violated and how it was violated (e. g., overweight on specific axle by xxx pounds or which brake was out of adjustment and how far out of adjustment it was). A violation differs from a citation because it is not adjudicated by the courts. It specifically includes the date/time and location of the violation and identification of the vehicle, driver, and associated equipment/cargo.
DPS Roadside Safety Inspection	ADOT ECD CVO Administration Center	daily site activity data	Planned	Record of daily activities at commercial vehicle check stations including summaries of screening events and inspections.
DPS Roadside Safety Inspection	ADOT ECD CVO Administration Center	information on violators	Planned	Information on violators provided by a law enforcement agency. May include information about commercial vehicle violations or other kinds of violations associated with the particular entity. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
DPS Roadside Safety Inspection	ADOT ECD CVO Administration Center	safety inspection report	Planned	Report containing results of commercial vehicle safety inspection. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
DPS Roadside Safety Inspection	ADOT ECD CVO Administration Center	targeted list	Planned	List of carriers, drivers, and/or vehicles of interest for enforcement purposes.
DPS Roadside Safety Inspection	ADOT ECD CVO Administration Center	weigh-in-motion information	Planned	Information from commercial vehicle virtual weigh-in-motion systems including vehicle weight, vehicle dimensions, vehicle identification and driver identification.
DPS Roadside Safety Inspection	ADOT Electronic Bypass Stations	information on violators	Existing	Information on violators provided by a law enforcement agency. May include information about commercial vehicle violations or other kinds of violations associated with the particular entity. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
DPS Roadside Safety Inspection	ADOT MVD Commercial Vehicle Administration	accident report	Existing	Report of commercial vehicle safety accident. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
DPS Roadside Safety Inspection	ADOT MVD Commercial Vehicle Administration	citation	Existing	Report of commercial vehicle citation. The citation includes references to the statute(s) that was (were) violated. It includes information on the violator and the officer issuing the citation. A citation differs from a violation because it is adjudicated by the courts. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
DPS Roadside Safety Inspection	ADOT MVD Commercial Vehicle Administration	commercial vehicle violation notification	Existing	Notification of a violation. The violation notification flow describes the statute or regulation that was violated and how it was violated (e. g., overweight on specific axle by xxx pounds or which brake was out of adjustment and how far out of adjustment it was). A violation differs from a citation because it is not adjudicated by the courts. It specifically includes the date/time and location of the violation and identification of the vehicle, driver, and associated equipment/cargo.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Roadside Safety Inspection	ADOT MVD Commercial Vehicle Administration	daily site activity data	Existing	Record of daily activities at commercial vehicle check stations including summaries of screening events and inspections.
DPS Roadside Safety Inspection	ADOT MVD Commercial Vehicle Administration	information on violators	Planned	Information on violators provided by a law enforcement agency. May include information about commercial vehicle violations or other kinds of violations associated with the particular entity. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
DPS Roadside Safety Inspection	ADOT MVD Commercial Vehicle Administration	safety inspection report	Existing	Report containing results of commercial vehicle safety inspection. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
DPS Roadside Safety Inspection	ADOT MVD Commercial Vehicle Administration	targeted list	Existing	List of carriers, drivers, and/or vehicles of interest for enforcement purposes.
DPS Roadside Safety Inspection	ADOT MVD Commercial Vehicle Administration	weigh-in-motion information	Existing	Information from commercial vehicle virtual weigh-in-motion systems including vehicle weight, vehicle dimensions, vehicle identification and driver identification.
DPS Roadside Safety Inspection	ADOT WIM Stations	information on violators	Existing	Information on violators provided by a law enforcement agency. May include information about commercial vehicle violations or other kinds of violations associated with the particular entity. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
DPS Roadside Safety Inspection	Commercial Vehicle Driver and Vehicle Verification Systems	accident report	Existing	Report of commercial vehicle safety accident. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
DPS Roadside Safety Inspection	Commercial Vehicle Driver and Vehicle Verification Systems	citation	Existing	Report of commercial vehicle citation. The citation includes references to the statute(s) that was (were) violated. It includes information on the violator and the officer issuing the citation. A citation differs from a violation because it is adjudicated by the courts. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
DPS Roadside Safety Inspection	Commercial Vehicle Driver and Vehicle Verification Systems	commercial vehicle violation notification	Existing	Notification of a violation. The violation notification flow describes the statute or regulation that was violated and how it was violated (e. g., overweight on specific axle by xxx pounds or which brake was out of adjustment and how far out of adjustment it was). A violation differs from a citation because it is not adjudicated by the courts. It specifically includes the date/time and location of the violation and identification of the vehicle, driver, and associated equipment/cargo.
DPS Roadside Safety Inspection	Commercial Vehicle Driver and Vehicle Verification Systems	daily site activity data	Existing	Record of daily activities at commercial vehicle check stations including summaries of screening events and inspections.
DPS Roadside Safety Inspection	Commercial Vehicle Driver and Vehicle Verification Systems	information on violators	Planned	Information on violators provided by a law enforcement agency. May include information about commercial vehicle violations or other kinds of violations associated with the particular entity. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Roadside Safety Inspection	Commercial Vehicle Driver and Vehicle Verification Systems	safety inspection report	Existing	Report containing results of commercial vehicle safety inspection. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
DPS Roadside Safety Inspection	Commercial Vehicle Driver and Vehicle Verification Systems	targeted list	Existing	List of carriers, drivers, and/or vehicles of interest for enforcement purposes.
DPS Roadside Safety Inspection	Commercial Vehicle Driver and Vehicle Verification Systems	weigh-in-motion information	Existing	Information from commercial vehicle virtual weigh-in-motion systems including vehicle weight, vehicle dimensions, vehicle identification and driver identification.
DPS Roadside Safety Inspection	Commercial Vehicles	request tag data	Planned	Request for tag information including tag id and associated data.
DPS Roadside Safety Inspection	DEMA Enforcement	commercial vehicle violation notification	Existing	Notification of a violation. The violation notification flow describes the statute or regulation that was violated and how it was violated (e. g., overweight on specific axle by xxx pounds or which brake was out of adjustment and how far out of adjustment it was). A violation differs from a citation because it is not adjudicated by the courts. It specifically includes the date/time and location of the violation and identification of the vehicle, driver, and associated equipment/cargo.
DPS Roadside Safety Inspection	DPS Central Communications Center	commercial vehicle incident notification	Planned	Information about a Commercial Vehicle or Freight Equipment breach, non-permitted security sensitive hazmat detected at the roadside, route deviation, or Commercial Vehicle Driver / Commercial Vehicle / Freight Equipment assignment mismatches which includes the location of the Commercial Vehicle and appropriate identities. May carry information that enables incident reporting to responders, and also includes the type of vehicle and cargo concerned.
DPS Roadside Safety Inspection	DPS Commercial Vehicle Enforcement	accident report	Existing	Report of commercial vehicle safety accident. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
DPS Roadside Safety Inspection	DPS Commercial Vehicle Enforcement	citation	Existing	Report of commercial vehicle citation. The citation includes references to the statute(s) that was (were) violated. It includes information on the violator and the officer issuing the citation. A citation differs from a violation because it is adjudicated by the courts. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
DPS Roadside Safety Inspection	DPS Commercial Vehicle Enforcement	commercial vehicle violation notification	Existing	Notification of a violation. The violation notification flow describes the statute or regulation that was violated and how it was violated (e. g., overweight on specific axle by xxx pounds or which brake was out of adjustment and how far out of adjustment it was). A violation differs from a citation because it is not adjudicated by the courts. It specifically includes the date/time and location of the violation and identification of the vehicle, driver, and associated equipment/cargo.
DPS Roadside Safety Inspection	DPS Commercial Vehicle Enforcement	daily site activity data	Existing	Record of daily activities at commercial vehicle check stations including summaries of screening events and inspections.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Roadside Safety Inspection	DPS Commercial Vehicle Enforcement	information on violators	Planned	Information on violators provided by a law enforcement agency. May include information about commercial vehicle violations or other kinds of violations associated with the particular entity. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
DPS Roadside Safety Inspection	DPS Commercial Vehicle Enforcement	safety inspection report	Existing	Report containing results of commercial vehicle safety inspection. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
DPS Roadside Safety Inspection	DPS Commercial Vehicle Enforcement	targeted list	Existing	List of carriers, drivers, and/or vehicles of interest for enforcement purposes.
DPS Roadside Safety Inspection	DPS Commercial Vehicle Enforcement	weigh-in-motion information	Existing	Information from commercial vehicle virtual weigh-in-motion systems including vehicle weight, vehicle dimensions, vehicle identification and driver identification.
DPS Roadside Safety Inspection	International Fuel Tax Agreement (IFTA) Clearinghouse	citation	Existing	Report of commercial vehicle citation. The citation includes references to the statute(s) that was (were) violated. It includes information on the violator and the officer issuing the citation. A citation differs from a violation because it is adjudicated by the courts. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
DPS Roadside Safety Inspection	International Fuel Tax Agreement (IFTA) Clearinghouse	commercial vehicle violation notification	Existing	Notification of a violation. The violation notification flow describes the statute or regulation that was violated and how it was violated (e. g., overweight on specific axle by xxx pounds or which brake was out of adjustment and how far out of adjustment it was). A violation differs from a citation because it is not adjudicated by the courts. It specifically includes the date/time and location of the violation and identification of the vehicle, driver, and associated equipment/cargo.
DPS Roadside Safety Inspection	International Fuel Tax Agreement (IFTA) Clearinghouse	daily site activity data	Existing	Record of daily activities at commercial vehicle check stations including summaries of screening events and inspections.
DPS Roadside Safety Inspection	International Fuel Tax Agreement (IFTA) Clearinghouse	information on violators	Planned	Information on violators provided by a law enforcement agency. May include information about commercial vehicle violations or other kinds of violations associated with the particular entity. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
DPS Roadside Safety Inspection	International Fuel Tax Agreement (IFTA) Clearinghouse	targeted list	Existing	List of carriers, drivers, and/or vehicles of interest for enforcement purposes.
DPS Roadside Safety Inspection	International Fuel Tax Agreement (IFTA) Clearinghouse	weigh-in-motion information	Existing	Information from commercial vehicle virtual weigh-in-motion systems including vehicle weight, vehicle dimensions, vehicle identification and driver identification.
DPS Roadside Safety Inspection	International Registration Plan (IRP) Clearinghouse	accident report	Existing	Report of commercial vehicle safety accident. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Roadside Safety Inspection	International Registration Plan (IRP) Clearinghouse	citation	Existing	Report of commercial vehicle citation. The citation includes references to the statute(s) that was (were) violated. It includes information on the violator and the officer issuing the citation. A citation differs from a violation because it is adjudicated by the courts. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
DPS Roadside Safety Inspection	International Registration Plan (IRP) Clearinghouse	commercial vehicle violation notification	Existing	Notification of a violation. The violation notification flow describes the statute or regulation that was violated and how it was violated (e. g., overweight on specific axle by xxx pounds or which brake was out of adjustment and how far out of adjustment it was). A violation differs from a citation because it is not adjudicated by the courts. It specifically includes the date/time and location of the violation and identification of the vehicle, driver, and associated equipment/cargo.
DPS Roadside Safety Inspection	International Registration Plan (IRP) Clearinghouse	daily site activity data	Existing	Record of daily activities at commercial vehicle check stations including summaries of screening events and inspections.
DPS Roadside Safety Inspection	International Registration Plan (IRP) Clearinghouse	information on violators	Planned	Information on violators provided by a law enforcement agency. May include information about commercial vehicle violations or other kinds of violations associated with the particular entity. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
DPS Roadside Safety Inspection	International Registration Plan (IRP) Clearinghouse	safety inspection report	Existing	Report containing results of commercial vehicle safety inspection. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
DPS Roadside Safety Inspection	International Registration Plan (IRP) Clearinghouse	targeted list	Existing	List of carriers, drivers, and/or vehicles of interest for enforcement purposes.
DPS Roadside Safety Inspection	International Registration Plan (IRP) Clearinghouse	weigh-in-motion information	Existing	Information from commercial vehicle virtual weigh-in-motion systems including vehicle weight, vehicle dimensions, vehicle identification and driver identification.
DPS Roadside Safety Inspection	Safety Fitness Electronic Record (SAFER)	accident report	Existing	Report of commercial vehicle safety accident. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
DPS Roadside Safety Inspection	Safety Fitness Electronic Record (SAFER)	citation	Existing	Report of commercial vehicle citation. The citation includes references to the statute(s) that was (were) violated. It includes information on the violator and the officer issuing the citation. A citation differs from a violation because it is adjudicated by the courts. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
DPS Roadside Safety Inspection	Safety Fitness Electronic Record (SAFER)	commercial vehicle violation notification	Existing	Notification of a violation. The violation notification flow describes the statute or regulation that was violated and how it was violated (e. g., overweight on specific axle by xxx pounds or which brake was out of adjustment and how far out of adjustment it was). A violation differs from a citation because it is not adjudicated by the courts. It specifically includes the date/time and location of the violation and identification of the vehicle, driver, and associated equipment/cargo.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Roadside Safety Inspection	Safety Fitness Electronic Record (SAFER)	daily site activity data	Existing	Record of daily activities at commercial vehicle check stations including summaries of screening events and inspections.
DPS Roadside Safety Inspection	Safety Fitness Electronic Record (SAFER)	safety inspection report	Existing	Report containing results of commercial vehicle safety inspection. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
DPS Roadside Safety Inspection	Safety Fitness Electronic Record (SAFER)	targeted list	Existing	List of carriers, drivers, and/or vehicles of interest for enforcement purposes.
DPS Roadside Safety Inspection	Safety Fitness Electronic Record (SAFER)	weigh-in-motion information	Existing	Information from commercial vehicle virtual weigh-in-motion systems including vehicle weight, vehicle dimensions, vehicle identification and driver identification.
DPS Vehicles	ADOT ITS Field Equipment	local signal preemption request	Planned	Direct control signal or message to a signalized intersection that results in preemption of the current control plan and grants right-of-way to the requesting vehicle.
DPS Vehicles	DPS Central Communications Center	emergency dispatch response	Existing	Request for additional emergency dispatch information and provision of en route status.
DPS Vehicles	DPS Central Communications Center	emergency vehicle tracking data	Existing	The current location and operating status of the emergency vehicle.
DPS Vehicles	DPS Central Communications Center	incident scene status	Planned	Information gathered at the incident site that more completely characterizes the incident and provides current incident response status.
DPS Vehicles	DPS Central Communications Center	road closure notification	Planned	Notification that agency personnel have closed a road due to adverse weather, major incident, or other reason.
DPS Vehicles	DPS Central Communications Center	service patrol dispatch response	Existing	Request for additional dispatch information and provision of en route status.
DPS Vehicles	DPS Central Communications Center	service patrol incident status	Existing	Information gathered at the incident site by a service patrol vehicle that more completely characterizes the incident, the services provided, and clearance status.
DPS Wireless Systems Bureau	ADOT Engineering Districts	maint and constr resource coordination	Planned	Request for road maintenance and construction resources that can be used in the diversion of traffic (cones, portable signs), clearance of a road hazard, repair of ancillary damage, or any other incident response.
DPS Wireless Systems Bureau	ADOT Engineering Districts	roadway maintenance status	Planned	Summary of maintenance fleet operations affecting the road network. This includes the status of winter maintenance (snow plow schedule and current status).
DPS Wireless Systems Bureau	Cities and Towns Public Works	maint and constr resource coordination	Planned	Request for road maintenance and construction resources that can be used in the diversion of traffic (cones, portable signs), clearance of a road hazard, repair of ancillary damage, or any other incident response.
DPS Wireless Systems Bureau	Cities and Towns Public Works	road weather information	Planned	Road conditions and weather information that are made available by road maintenance operations to other transportation system operators.
DPS Wireless Systems Bureau	Cities and Towns Public Works	work zone information	Planned	Summary of maintenance and construction work zone activities affecting the road network including the nature of the maintenance or construction activity, location, impact to the roadway, expected time(s) and duration of impact, anticipated delays, alternate routes, and suggested speed limits. This information may be augmented with images that provide a visual indication of current work zone status and traffic impacts.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
DPS Wireless Systems Bureau	County Public Works	maint and constr resource coordination	Planned	Request for road maintenance and construction resources that can be used in the diversion of traffic (cones, portable signs), clearance of a road hazard, repair of ancillary damage, or any other incident response.
DPS Wireless Systems Bureau	County Public Works	road weather information	Planned	Road conditions and weather information that are made available by road maintenance operations to other transportation system operators.
DPS Wireless Systems Bureau	County Public Works	roadway maintenance status	Planned	Summary of maintenance fleet operations affecting the road network. This includes the status of winter maintenance (snow plow schedule and current status).
Driver Identification Card	Commercial Vehicles	cv driver credential	Planned	Driver information (e.g., identity, biometrics, address, date of birth, endorsements, restrictions) stored on a driver's license or other official identification card used to identify a driver of commercial vehicles.
Driver Identification Card	DPS Roadside Safety Inspection	cv driver credential	Planned	Driver information (e.g., identity, biometrics, address, date of birth, endorsements, restrictions) stored on a driver's license or other official identification card used to identify a driver of commercial vehicles.
Electric Utilities	Electric Vehicle Charging Stations	meter control	Planned	Control of meter to modify reporting data and intervals, and to enable controls over meter use, which could include current limits.
Electric Utilities	Payment Administration Center	usage and billing info	Planned	Account, usage, charging, limits and similar information relevant to electric utility billing.
Electric Vehicle Charging Analytics and Reporting Tool (EV-ChART)	Electric Vehicle Charging Stations	electric charging station management information	Planned	Parameters that support management of an electric charging station. Load balancing, Reservation requests, Hours of operation, display configuration (ads), rules and regulations, etc.
Electric Vehicle Charging Stations	Basic Private Vehicle	current charging status	Planned	Current charging status including current charge rate, estimated time to completion, and cost associated with the charge.
Electric Vehicle Charging Stations	Electric Utilities	meter data	Planned	Report of energy consumption, voltage levels, current, power factor and similar diagnostic and monitoring information.
Electric Vehicle Charging Stations	Electric Vehicle Charging Analytics and Reporting Tool (EV-ChART)	electric charging station data	Planned	Information provided for electric charging stations to the management center identifying the location, operating status, current availability, no-shows, charging capacity, etc.
Electric Vehicle Charging Stations	Payment Administration Center	authorization request	Planned	Request to determine if a transportation user is authorized to use a particular transportation resource.
Electric Vehicle Charging Stations	Private Vehicle OBE	current charging status	Planned	Current charging status including current charge rate, estimated time to completion, and cost associated with the charge.
Emergency Medical Transport/Ambulances	ADOT ITS Field Equipment	local signal preemption request	Planned	Direct control signal or message to a signalized intersection that results in preemption of the current control plan and grants right-of-way to the requesting vehicle.
Emergency Medical Transport/Ambulances	ADOT TOC and EMC	road closure notification	Existing	Notification that agency personnel have closed a road due to adverse weather, major incident, or other reason.
Emergency Medical Transport/Ambulances	Cities and Towns Police and Fire Dispatch	emergency dispatch response	Existing	Request for additional emergency dispatch information and provision of en route status.
Emergency Medical Transport/Ambulances	Cities and Towns Police and Fire Dispatch	emergency vehicle tracking data	Existing	The current location and operating status of the emergency vehicle.
Emergency Medical Transport/Ambulances	County Sheriff Dispatch	emergency dispatch response	Existing	Request for additional emergency dispatch information and provision of en route status.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Emergency Medical Transport/Ambulances	County Sheriff Dispatch	emergency vehicle tracking data	Existing	The current location and operating status of the emergency vehicle.
Emergency Medical Transport/Ambulances	DPS Central Communications Center	emergency dispatch response	Existing	Request for additional emergency dispatch information and provision of en route status.
Emergency Medical Transport/Ambulances	DPS Central Communications Center	emergency vehicle tracking data	Existing	The current location and operating status of the emergency vehicle.
Financial Institution	ADOT MVD Commercial Vehicle Administration	settlement	Planned	Information exchanged to settle charges and distribute or debit accounts appropriate to the authorized charges.
Financial Institution	Cities and Towns Transit Dispatch	settlement	Planned	Information exchanged to settle charges and distribute or debit accounts appropriate to the authorized charges.
Financial Institution	Commercial Vehicle Driver and Vehicle Verification Systems	settlement	Planned	Information exchanged to settle charges and distribute or debit accounts appropriate to the authorized charges.
Financial Institution	DPS Commercial Vehicle Enforcement	settlement	Planned	Information exchanged to settle charges and distribute or debit accounts appropriate to the authorized charges.
Financial Institution	International Fuel Tax Agreement (IFTA) Clearinghouse	settlement	Planned	Information exchanged to settle charges and distribute or debit accounts appropriate to the authorized charges.
Financial Institution	International Registration Plan (IRP) Clearinghouse	settlement	Planned	Information exchanged to settle charges and distribute or debit accounts appropriate to the authorized charges.
Financial Institution	Local Dial-A-Ride Transit Dispatchers	settlement	Planned	Information exchanged to settle charges and distribute or debit accounts appropriate to the authorized charges.
Financial Institution	NAIPTA (dba Mountain Line) Paratransit	settlement	Planned	Information exchanged to settle charges and distribute or debit accounts appropriate to the authorized charges.
Financial Institution	NAIPTA (dba Mountain Line) Transit Management Center	settlement	Planned	Information exchanged to settle charges and distribute or debit accounts appropriate to the authorized charges.
Financial Institution	Payment Administration Center	payment methods financial institution	Planned	A list of valid payment methods accepted by a financial center.
Financial Institution	Payment Administration Center	settlement	Planned	Information exchanged to settle charges and distribute or debit accounts appropriate to the authorized charges.
Financial Institution	Transit Providers Dispatch (Public and Private)	settlement	Planned	Information exchanged to settle charges and distribute or debit accounts appropriate to the authorized charges.
Financial Institution	Tribal Transit Centers	settlement	Planned	Information exchanged to settle charges and distribute or debit accounts appropriate to the authorized charges.
Financial Institution	Yuma County Area Transit (YCAT)	settlement	Planned	Information exchanged to settle charges and distribute or debit accounts appropriate to the authorized charges.
Fleet Management Systems	ADOT ECD CVO Administration Center	audit data	Planned	Information to support a tax audit.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Fleet Management Systems	ADOT ECD CVO Administration Center	credential application	Planned	Application for commercial vehicle credentials. Authorization for payment is included. It contains details about the administrative request for a Freight Vehicle registration. It also carries the acknowledgement that a payment has been placed in the bank account of the administration by the Fleet Operator. This information flow includes fleet operator request ID, vehicle characteristics, transport need (origin and destination), electronic signature and date of payment.
Fleet Management Systems	ADOT ECD CVO Administration Center	cv repair status	Planned	Information about the completion of a repair to a commercial vehicle.
Fleet Management Systems	ADOT ECD CVO Administration Center	driver log	Planned	A daily log showing hours in service for the current driver. The query flow is not explicitly shown.
Fleet Management Systems	ADOT ECD CVO Administration Center	expedited clearance registration	Planned	Registration of the importer, carrier, conveyance, and driver, as applicable, for border clearance programs such as FAST, Customs Self Assessment (Canada), C-TPAT (US), PIP (Canada), ACI (Canada), and ACE (US). Includes electronic filing of forms and associated payment.
Fleet Management Systems	ADOT ECD CVO Administration Center	manifest data	Planned	Identifies Port of Entry, date, and information on carrier and goods, origin, etc.
Fleet Management Systems	ADOT ECD CVO Administration Center	on-board safety data	Planned	Safety data measured by on-board sensors. Includes information about the vehicle, vehicle components, cargo, and driver. The query flow is not explicitly shown.
Fleet Management Systems	ADOT ECD CVO Administration Center	request for permit	Planned	Request for commercial vehicle permits including oversize, overweight, or hazmat permit. It contains details about the administrative request for conveying hazardous goods. This information flow identifies the freight operator, vehicle dimensions, vehicle weight, hazardous goods characteristics, transport need (origin and destination) and electronic signature.
Fleet Management Systems	ADOT ECD CVO Administration Center	tax filing	Planned	Commercial vehicle tax filing data. Authorization for payment is included.
Fleet Management Systems	ADOT ECD CVO Administration Center	unique identifiers	Planned	Unique identifiers for the motor carrier, driver, and vehicle. This flow identifies the driver actually operating the vehicle in multi-driver scenarios.
Fleet Management Systems	ADOT ECD Dispatch	hazmat information	Existing	Information about a particular hazmat load including nature of the load and unloading instructions. May also include hazmat vehicle route and route update information.
Fleet Management Systems	ADOT MVD Commercial Vehicle Administration	audit data	Planned	Information to support a tax audit.
Fleet Management Systems	ADOT MVD Commercial Vehicle Administration	credential application	Planned	Application for commercial vehicle credentials. Authorization for payment is included. It contains details about the administrative request for a Freight Vehicle registration. It also carries the acknowledgement that a payment has been placed in the bank account of the administration by the Fleet Operator. This information flow includes fleet operator request ID, vehicle characteristics, transport need (origin and destination), electronic signature and date of payment.
Fleet Management Systems	ADOT MVD Commercial Vehicle Administration	cv repair status	Planned	Information about the completion of a repair to a commercial vehicle.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Fleet Management Systems	ADOT MVD Commercial Vehicle Administration	driver log	Planned	A daily log showing hours in service for the current driver. The query flow is not explicitly shown.
Fleet Management Systems	ADOT MVD Commercial Vehicle Administration	on-board safety data	Planned	Safety data measured by on-board sensors. Includes information about the vehicle, vehicle components, cargo, and driver. The query flow is not explicitly shown.
Fleet Management Systems	ADOT MVD Commercial Vehicle Administration	request for permit	Planned	Request for commercial vehicle permits including oversize, overweight, or hazmat permit. It contains details about the administrative request for conveying hazardous goods. This information flow identifies the freight operator, vehicle dimensions, vehicle weight, hazardous goods characteristics, transport need (origin and destination) and electronic signature.
Fleet Management Systems	ADOT MVD Commercial Vehicle Administration	tax filing	Planned	Commercial vehicle tax filing data. Authorization for payment is included.
Fleet Management Systems	ADOT MVD Commercial Vehicle Administration	unique identifiers	Planned	Unique identifiers for the motor carrier, driver, and vehicle. This flow identifies the driver actually operating the vehicle in multi-driver scenarios.
Fleet Management Systems	ADOT TOC Traffic Information Center	commercial vehicle trip information	Planned	Information about vehicle trips including load information, location, speed, and routing. The information would be sanitized for distribution outside of the commercial vehicle company.
Fleet Management Systems	ADOT TOC Traffic Information Center	freight traveler information preferences	Planned	Traveler information preferences from fleet and freight management systems or commercial vehicle drivers including: area covered by fleet/driver, types of freight managed (including special restrictions), preferred routes, other travel preferences pertaining to trip costs or tolls. Also covers revised trip planning requirements for trips already underway.
Fleet Management Systems	Commercial Vehicle Driver and Vehicle Verification Systems	audit data	Planned	Information to support a tax audit.
Fleet Management Systems	Commercial Vehicle Driver and Vehicle Verification Systems	credential application	Planned	Application for commercial vehicle credentials. Authorization for payment is included. It contains details about the administrative request for a Freight Vehicle registration. It also carries the acknowledgement that a payment has been placed in the bank account of the administration by the Fleet Operator. This information flow includes fleet operator request ID, vehicle characteristics, transport need (origin and destination), electronic signature and date of payment.
Fleet Management Systems	Commercial Vehicle Driver and Vehicle Verification Systems	cv repair status	Planned	Information about the completion of a repair to a commercial vehicle.
Fleet Management Systems	Commercial Vehicle Driver and Vehicle Verification Systems	driver log	Planned	A daily log showing hours in service for the current driver. The query flow is not explicitly shown.
Fleet Management Systems	Commercial Vehicle Driver and Vehicle Verification Systems	on-board safety data	Planned	Safety data measured by on-board sensors. Includes information about the vehicle, vehicle components, cargo, and driver. The query flow is not explicitly shown.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Fleet Management Systems	Commercial Vehicle Driver and Vehicle Verification Systems	request for permit	Planned	Request for commercial vehicle permits including oversize, overweight, or hazmat permit. It contains details about the administrative request for conveying hazardous goods. This information flow identifies the freight operator, vehicle dimensions, vehicle weight, hazardous goods characteristics, transport need (origin and destination) and electronic signature.
Fleet Management Systems	Commercial Vehicle Driver and Vehicle Verification Systems	tax filing	Planned	Commercial vehicle tax filing data. Authorization for payment is included.
Fleet Management Systems	Commercial Vehicle Driver and Vehicle Verification Systems	unique identifiers	Planned	Unique identifiers for the motor carrier, driver, and vehicle. This flow identifies the driver actually operating the vehicle in multi-driver scenarios.
Fleet Management Systems	Commercial Vehicles	driver log	Planned	A daily log showing hours in service for the current driver. The query flow is not explicitly shown.
Fleet Management Systems	Commercial Vehicles	fleet to driver update	Existing	Updated instructions to the driver including dispatch, routing, travel and parking information, and special instructions. Special instructions include incident management instruction, operational tasks, impacted transport orders in case of an incident, task descriptions with trip/route/load plan, transport order status information, driver information, vehicle information, cargo information and trip information.
Fleet Management Systems	Commercial Vehicles	safety inspection record	Planned	Record containing results of commercial vehicle safety inspection.
Fleet Management Systems	Commercial Vehicles	trigger area	Planned	A geographic area a commercial motor vehicle crosses into, which initiates a request to compile and transmit a safety data message. May be associated with a time period.
Fleet Management Systems	Commercial Vehicles	trigger area notification	Planned	Notification to activate wireless roadside inspection safety data message collection.
Fleet Management Systems	Commercial Vehicles	trip identification number	Planned	The unique trip load number for a specific cross-border shipment.
Fleet Management Systems	DPS Central Communications Center	hazmat information	Existing	Information about a particular hazmat load including nature of the load and unloading instructions. May also include hazmat vehicle route and route update information.
Fleet Management Systems	DPS Commercial Vehicle Enforcement	audit data	Planned	Information to support a tax audit.
Fleet Management Systems	DPS Commercial Vehicle Enforcement	credential application	Planned	Application for commercial vehicle credentials. Authorization for payment is included. It contains details about the administrative request for a Freight Vehicle registration. It also carries the acknowledgement that a payment has been placed in the bank account of the administration by the Fleet Operator. This information flow includes fleet operator request ID, vehicle characteristics, transport need (origin and destination), electronic signature and date of payment.
Fleet Management Systems	DPS Commercial Vehicle Enforcement	driver log	Planned	A daily log showing hours in service for the current driver. The query flow is not explicitly shown.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Fleet Management Systems	DPS Commercial Vehicle Enforcement	on-board safety data	Planned	Safety data measured by on-board sensors. Includes information about the vehicle, vehicle components, cargo, and driver. The query flow is not explicitly shown.
Fleet Management Systems	DPS Commercial Vehicle Enforcement	request for permit	Planned	Request for commercial vehicle permits including oversize, overweight, or hazmat permit. It contains details about the administrative request for conveying hazardous goods. This information flow identifies the freight operator, vehicle dimensions, vehicle weight, hazardous goods characteristics, transport need (origin and destination) and electronic signature.
Fleet Management Systems	DPS Commercial Vehicle Enforcement	tax filing	Planned	Commercial vehicle tax filing data. Authorization for payment is included.
Fleet Management Systems	DPS Commercial Vehicle Enforcement	unique identifiers	Planned	Unique identifiers for the motor carrier, driver, and vehicle. This flow identifies the driver actually operating the vehicle in multi-driver scenarios.
Fleet Management Systems	Freight Shipping System	freight transportation status	Planned	A time-stamped status of a freight shipment as it passes through the supply chain from manufacturer through arrival at its final destination; including cargo movement logs, routing information, and cargo ID's. This includes cargo status, current operation, information on incidents associated with the cargo, and identification of delays/penalties.
Fleet Management Systems	International Fuel Tax Agreement (IFTA) Clearinghouse	audit data	Planned	Information to support a tax audit.
Fleet Management Systems	International Fuel Tax Agreement (IFTA) Clearinghouse	credential application	Planned	Application for commercial vehicle credentials. Authorization for payment is included. It contains details about the administrative request for a Freight Vehicle registration. It also carries the acknowledgement that a payment has been placed in the bank account of the administration by the Fleet Operator. This information flow includes fleet operator request ID, vehicle characteristics, transport need (origin and destination), electronic signature and date of payment.
Fleet Management Systems	International Fuel Tax Agreement (IFTA) Clearinghouse	driver log	Planned	A daily log showing hours in service for the current driver. The query flow is not explicitly shown.
Fleet Management Systems	International Fuel Tax Agreement (IFTA) Clearinghouse	on-board safety data	Planned	Safety data measured by on-board sensors. Includes information about the vehicle, vehicle components, cargo, and driver. The query flow is not explicitly shown.
Fleet Management Systems	International Fuel Tax Agreement (IFTA) Clearinghouse	request for permit	Planned	Request for commercial vehicle permits including oversize, overweight, or hazmat permit. It contains details about the administrative request for conveying hazardous goods. This information flow identifies the freight operator, vehicle dimensions, vehicle weight, hazardous goods characteristics, transport need (origin and destination) and electronic signature.
Fleet Management Systems	International Fuel Tax Agreement (IFTA) Clearinghouse	tax filing	Planned	Commercial vehicle tax filing data. Authorization for payment is included.
Fleet Management Systems	International Fuel Tax Agreement (IFTA) Clearinghouse	unique identifiers	Planned	Unique identifiers for the motor carrier, driver, and vehicle. This flow identifies the driver actually operating the vehicle in multi-driver scenarios.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Fleet Management Systems	International Registration Plan (IRP) Clearinghouse	audit data	Planned	Information to support a tax audit.
Fleet Management Systems	International Registration Plan (IRP) Clearinghouse	credential application	Planned	Application for commercial vehicle credentials. Authorization for payment is included. It contains details about the administrative request for a Freight Vehicle registration. It also carries the acknowledgement that a payment has been placed in the bank account of the administration by the Fleet Operator. This information flow includes fleet operator request ID, vehicle characteristics, transport need (origin and destination), electronic signature and date of payment.
Fleet Management Systems	International Registration Plan (IRP) Clearinghouse	cv repair status	Planned	Information about the completion of a repair to a commercial vehicle.
Fleet Management Systems	International Registration Plan (IRP) Clearinghouse	driver log	Planned	A daily log showing hours in service for the current driver. The query flow is not explicitly shown.
Fleet Management Systems	International Registration Plan (IRP) Clearinghouse	on-board safety data	Planned	Safety data measured by on-board sensors. Includes information about the vehicle, vehicle components, cargo, and driver. The query flow is not explicitly shown.
Fleet Management Systems	International Registration Plan (IRP) Clearinghouse	request for permit	Planned	Request for commercial vehicle permits including oversize, overweight, or hazmat permit. It contains details about the administrative request for conveying hazardous goods. This information flow identifies the freight operator, vehicle dimensions, vehicle weight, hazardous goods characteristics, transport need (origin and destination) and electronic signature.
Fleet Management Systems	International Registration Plan (IRP) Clearinghouse	tax filing	Planned	Commercial vehicle tax filing data. Authorization for payment is included.
Fleet Management Systems	International Registration Plan (IRP) Clearinghouse	unique identifiers	Planned	Unique identifiers for the motor carrier, driver, and vehicle. This flow identifies the driver actually operating the vehicle in multi-driver scenarios.
Fleet Management Systems	Maricopa County EOC	hazmat information	Existing	Information about a particular hazmat load including nature of the load and unloading instructions. May also include hazmat vehicle route and route update information.
Fleet Management Systems	POE Administration Center	expedited clearance registration	Existing	Registration of the importer, carrier, conveyance, and driver, as applicable, for border clearance programs such as FAST, Customs Self Assessment (Canada), C-TPAT (US), PIP (Canada), ACI (Canada), and ACE (US). Includes electronic filing of forms and associated payment.
Fleet Management Systems	POE Administration Center	manifest data	Existing	Identifies Port of Entry, date, and information on carrier and goods, origin, etc.
Fleet Management Systems	Safety Fitness Electronic Record (SAFER)	driver log	Planned	A daily log showing hours in service for the current driver. The query flow is not explicitly shown.
Fleet Management Systems	Safety Fitness Electronic Record (SAFER)	on-board safety data	Planned	Safety data measured by on-board sensors. Includes information about the vehicle, vehicle components, cargo, and driver. The query flow is not explicitly shown.
Fleet Management Systems	Safety Fitness Electronic Record (SAFER)	unique identifiers	Planned	Unique identifiers for the motor carrier, driver, and vehicle. This flow identifies the driver actually operating the vehicle in multi-driver scenarios.
Fleet Management Systems	Tribal Public Safety Dispatch	hazmat information	Existing	Information about a particular hazmat load including nature of the load and unloading instructions. May also include hazmat vehicle route and route update information.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Freight Containers	ADOT WIM Stations	tag data	Planned	Unique tag ID and related vehicle information.
Freight Containers	Commercial Vehicles	freight equipment information	Planned	Container, trailer, or chassis information regarding identity, type, location, brake wear data, mileage, seal #, seal type, door open/close status, chassis bare/covered status, tethered / untethered status, temperature, humidity, power, battery levels, brake wear data, and bill of lading/information regarding the cargo/content.
Freight Containers	Fleet Management Systems	freight equipment information	Planned	Container, trailer, or chassis information regarding identity, type, location, brake wear data, mileage, seal #, seal type, door open/close status, chassis bare/covered status, tethered / untethered status, temperature, humidity, power, battery levels, brake wear data, and bill of lading/information regarding the cargo/content.
Freight Containers	POE Roadway Inspection Systems	tag data	Planned	Unique tag ID and related vehicle information.
Freight Shipping System	ADOT TOC Traffic Information Center	freight traveler information preferences	Planned	Traveler information preferences from fleet and freight management systems or commercial vehicle drivers including: area covered by fleet/driver, types of freight managed (including special restrictions), preferred routes, other travel preferences pertaining to trip costs or tolls. Also covers revised trip planning requirements for trips already underway.
Freight Shipping System	Commercial Vehicles	trip identification number	Planned	The unique trip load number for a specific cross-border shipment.
Freight Shipping System	Fleet Management Systems	freight transport booking	Planned	Booking information for the transport of freight that includes company, contact information, point of origin, pick-up location, drop-off location, and freight equipment identifier.
Freight Shipping System	Fleet Management Systems	freight transportation status	Planned	A time-stamped status of a freight shipment as it passes through the supply chain from manufacturer through arrival at its final destination; including cargo movement logs, routing information, and cargo ID's. This includes cargo status, current operation, information on incidents associated with the cargo, and identification of delays/penalties.
Freight Shipping System	POE Administration Center	manifest data	Existing	Identifies Port of Entry, date, and information on carrier and goods, origin, etc.
Independent School District Bus Dispatch	ADOT DEOC-Dept EM Ops Center	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
Independent School District Bus Dispatch	ADOT DEOC-Dept EM Ops Center	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Independent School District Bus Dispatch	ADOT DEOC-Dept EM Ops Center	emergency transit schedule information	Existing	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
Independent School District Bus Dispatch	ADOT DEOC-Dept EM Ops Center	emergency transit service response	Existing	Response indicating changes to transit service, fares, and/or restrictions that will be made and status of transit resources to be deployed to support emergency response and/or evacuation.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Independent School District Bus Dispatch	ADOT DEOC-Dept EM Ops Center	transit system status assessment	Planned	Assessment of damage sustained by the public transportation system including location and extent of the damage, current operational status including an estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Independent School District Bus Dispatch	Cities and Towns EOC-EMC	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
Independent School District Bus Dispatch	Cities and Towns EOC-EMC	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Independent School District Bus Dispatch	Cities and Towns EOC-EMC	emergency transit schedule information	Existing	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
Independent School District Bus Dispatch	Cities and Towns EOC-EMC	emergency transit service response	Existing	Response indicating changes to transit service, fares, and/or restrictions that will be made and status of transit resources to be deployed to support emergency response and/or evacuation.
Independent School District Bus Dispatch	Cities and Towns EOC-EMC	transit system status assessment	Planned	Assessment of damage sustained by the public transportation system including location and extent of the damage, current operational status including an estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Independent School District Bus Dispatch	Cities and Towns Police and Fire Dispatch	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
Independent School District Bus Dispatch	Cities and Towns Police and Fire Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Independent School District Bus Dispatch	Cities and Towns Police and Fire Dispatch	emergency transit schedule information	Existing	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
Independent School District Bus Dispatch	Cities and Towns Police and Fire Dispatch	emergency transit service response	Existing	Response indicating changes to transit service, fares, and/or restrictions that will be made and status of transit resources to be deployed to support emergency response and/or evacuation.
Independent School District Bus Dispatch	Cities and Towns Police and Fire Dispatch	transit system status assessment	Planned	Assessment of damage sustained by the public transportation system including location and extent of the damage, current operational status including an estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Independent School District Bus Dispatch	Cities and Towns Transit Dispatch	transit service coordination	Existing	Schedule coordination or AVL information shared between local/regional transit organizations. This includes coordination of connections and control parameters between transit properties as well as coordination of transit-related maintenance activities.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Independent School District Bus Dispatch	County EMC-EOC	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
Independent School District Bus Dispatch	County EMC-EOC	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Independent School District Bus Dispatch	County EMC-EOC	emergency transit schedule information	Existing	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
Independent School District Bus Dispatch	County EMC-EOC	emergency transit service response	Existing	Response indicating changes to transit service, fares, and/or restrictions that will be made and status of transit resources to be deployed to support emergency response and/or evacuation.
Independent School District Bus Dispatch	County EMC-EOC	transit system status assessment	Planned	Assessment of damage sustained by the public transportation system including location and extent of the damage, current operational status including an estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Independent School District Bus Dispatch	County Website and NIXLE	emergency transit schedule information	Planned	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
Independent School District Bus Dispatch	County Website and NIXLE	transit service coordination	Planned	Schedule coordination or AVL information shared between local/regional transit organizations. This includes coordination of connections and control parameters between transit properties as well as coordination of transit-related maintenance activities.
Independent School District Bus Dispatch	DEMA SEOC Arizona DEM Military Affairs	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
Independent School District Bus Dispatch	DEMA SEOC Arizona DEM Military Affairs	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Independent School District Bus Dispatch	DEMA SEOC Arizona DEM Military Affairs	emergency transit schedule information	Existing	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
Independent School District Bus Dispatch	DEMA SEOC Arizona DEM Military Affairs	emergency transit service response	Existing	Response indicating changes to transit service, fares, and/or restrictions that will be made and status of transit resources to be deployed to support emergency response and/or evacuation.
Independent School District Bus Dispatch	DEMA SEOC Arizona DEM Military Affairs	transit system status assessment	Planned	Assessment of damage sustained by the public transportation system including location and extent of the damage, current operational status including an estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Independent School District Bus Dispatch	Independent School District Buses	alarm acknowledge	Planned	Confirmation that alarm was received, instructions and additional information for the alarm initiator, and requests for additional information.
Independent School District Bus Dispatch	Independent School District Buses	remote vehicle disable	Planned	Signal used to remotely disable a transit vehicle.
Independent School District Bus Dispatch	Independent School District Buses	transit schedule information	Existing	Current and projected transit schedule information used to initialize the transit vehicle with a vehicle assignment, monitor schedule performance, and develop corrective actions on-board.
Independent School District Bus Dispatch	Independent School District Buses	transit traveler information	Existing	Transit information prepared to support transit users and other travelers. It contains transit schedules, real-time arrival information, fare schedules, alerts and advisories, and general transit service information.
Independent School District Bus Dispatch	Independent School District Buses	transit vehicle operator authentication update	Planned	Results of authentication process or update of on-board authentication database.
Independent School District Bus Dispatch	Independent School District Buses	transit vehicle operator information	Existing	Transit service instructions, wide area alerts, traffic information, road conditions, and other information for both transit and paratransit operators.
Independent School District Bus Dispatch	Local Dial-A-Ride Transit Dispatchers	transit service coordination	Planned	Schedule coordination or AVL information shared between local/regional transit organizations. This includes coordination of connections and control parameters between transit properties as well as coordination of transit-related maintenance activities.
Independent School District Bus Dispatch	Maricopa County EOC	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
Independent School District Bus Dispatch	Maricopa County EOC	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Independent School District Bus Dispatch	Maricopa County EOC	emergency transit schedule information	Existing	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
Independent School District Bus Dispatch	Maricopa County EOC	emergency transit service response	Existing	Response indicating changes to transit service, fares, and/or restrictions that will be made and status of transit resources to be deployed to support emergency response and/or evacuation.
Independent School District Bus Dispatch	Maricopa County EOC	transit system status assessment	Planned	Assessment of damage sustained by the public transportation system including location and extent of the damage, current operational status including an estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Independent School District Bus Dispatch	Mexico Customs and Border Patrol	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Independent School District Bus Dispatch	Mexico Customs and Border Patrol	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Independent School District Bus Dispatch	Mexico Customs and Border Patrol	emergency transit schedule information	Existing	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
Independent School District Bus Dispatch	Mexico Customs and Border Patrol	emergency transit service response	Existing	Response indicating changes to transit service, fares, and/or restrictions that will be made and status of transit resources to be deployed to support emergency response and/or evacuation.
Independent School District Bus Dispatch	Mexico Customs and Border Patrol	transit system status assessment	Planned	Assessment of damage sustained by the public transportation system including location and extent of the damage, current operational status including an estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Independent School District Bus Dispatch	Mexico Public Safety	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
Independent School District Bus Dispatch	Mexico Public Safety	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Independent School District Bus Dispatch	Mexico Public Safety	emergency transit schedule information	Existing	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
Independent School District Bus Dispatch	Mexico Public Safety	emergency transit service response	Existing	Response indicating changes to transit service, fares, and/or restrictions that will be made and status of transit resources to be deployed to support emergency response and/or evacuation.
Independent School District Bus Dispatch	Mexico Public Safety	transit system status assessment	Planned	Assessment of damage sustained by the public transportation system including location and extent of the damage, current operational status including an estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Independent School District Bus Dispatch	NAIPTA (dba Mountain Line) Website and FLGRide	emergency transit schedule information	Existing	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
Independent School District Bus Dispatch	Public Private Traveler Information	emergency transit schedule information	Planned	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
Independent School District Bus Dispatch	Transit Providers Dispatch (Public and Private)	transit service coordination	Planned	Schedule coordination or AVL information shared between local/regional transit organizations. This includes coordination of connections and control parameters between transit properties as well as coordination of transit-related maintenance activities.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Independent School District Bus Dispatch	Tribal Public Safety Dispatch	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
Independent School District Bus Dispatch	Tribal Public Safety Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Independent School District Bus Dispatch	Tribal Public Safety Dispatch	emergency transit schedule information	Existing	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
Independent School District Bus Dispatch	Tribal Public Safety Dispatch	emergency transit service response	Existing	Response indicating changes to transit service, fares, and/or restrictions that will be made and status of transit resources to be deployed to support emergency response and/or evacuation.
Independent School District Bus Dispatch	Tribal Public Safety Dispatch	transit system status assessment	Planned	Assessment of damage sustained by the public transportation system including location and extent of the damage, current operational status including an estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Independent School District Bus Dispatch	Tribal TMC-TOC-TIC	emergency transit schedule information	Planned	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
Independent School District Bus Dispatch	US Border Patrol Dispatch	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
Independent School District Bus Dispatch	US Border Patrol Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Independent School District Bus Dispatch	US Border Patrol Dispatch	emergency transit schedule information	Existing	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
Independent School District Bus Dispatch	US Border Patrol Dispatch	emergency transit service response	Existing	Response indicating changes to transit service, fares, and/or restrictions that will be made and status of transit resources to be deployed to support emergency response and/or evacuation.
Independent School District Bus Dispatch	US Border Patrol Dispatch	transit system status assessment	Planned	Assessment of damage sustained by the public transportation system including location and extent of the damage, current operational status including an estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Independent School District Bus Dispatch	Wide Area Alerting Systems	emergency transit schedule information	Planned	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Independent School District Bus Dispatch	YCAT Website	emergency transit schedule information	Existing	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
Independent School District Bus Dispatch	Yuma County Area Transit (YCAT)	transit service coordination	Planned	Schedule coordination or AVL information shared between local/regional transit organizations. This includes coordination of connections and control parameters between transit properties as well as coordination of transit-related maintenance activities.
Independent School District Buses	Independent School District Bus Dispatch	alarm notification	Planned	Notification of activation of an audible or silent alarm by a traveler in a public area or by a transit vehicle operator using an on-board device.
Independent School District Buses	Independent School District Bus Dispatch	transit traveler request	Existing	Request by a Transit traveler to summon assistance, request transit information, or request any other transit services.
Independent School District Buses	Independent School District Bus Dispatch	transit vehicle conditions	Existing	Operating conditions of transit vehicle (e.g., engine running, oil pressure, fuel level and usage). It includes status of other on-board systems including user displays, passenger counters, and security systems. This overall status information is also collected from unused (out of service) vehicles.
Independent School District Buses	Independent School District Bus Dispatch	transit vehicle location data	Existing	Current transit vehicle location and related operational conditions data provided by a transit vehicle.
Independent School District Buses	Independent School District Bus Dispatch	transit vehicle operator authentication information	Planned	Information regarding on-board transit operator authentication
Independent School District Buses	Independent School District Bus Dispatch	transit vehicle schedule performance	Existing	Estimated times of arrival and anticipated schedule deviations reported by a transit vehicle.
Independent School District Buses	Traveler Card-Smartcard	payment device update	Planned	Information updated concerning traveler's personal data including name, address, user account information, trip records, and profile data.
Independent School District Buses	Traveler Card-Smartcard	request for payment	Planned	Request to deduct cost of service from user's payment account.
Independent School District Buses	Travelers	traveler interface updates	Existing	Visual or audio information (e.g., routes, messages, guidance, emergency information) that is provided to the traveler.
International Fuel Tax Agreement (IFTA) Clearinghouse	ADOT ECD CVO Administration Center	credentials information	Existing	Response containing full vehicle fuel tax and registration credentials information. "Response" may be provided in reaction to a real-time query or a standing request for updated information. The query flow is not explicitly shown.
International Fuel Tax Agreement (IFTA) Clearinghouse	ADOT ECD CVO Administration Center	credentials status information	Existing	Credentials information such as registration, licensing, insurance, check flags, and electronic screening enrollment data. A unique identifier is included. Corresponds to the credentials portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
International Fuel Tax Agreement (IFTA) Clearinghouse	ADOT ECD CVO Administration Center	safety status information	Existing	Safety information such as safety ratings, security ratings or flags, inspection summaries, and violation summaries. A unique identifier is included. Corresponds to the safety and security portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
International Fuel Tax Agreement (IFTA) Clearinghouse	ADOT Electronic Bypass Stations	carrier participation report	Planned	Report that summarizes motor carrier participation in CVO programs. Used to identify the level of active participation and to report which enrolled carriers are not participating as expected.
International Fuel Tax Agreement (IFTA) Clearinghouse	ADOT Electronic Bypass Stations	commercial vehicle permit information	Existing	Information for commercial vehicle permits for oversize, overweight, or for dangerous goods. The query flow is not explicitly shown.
International Fuel Tax Agreement (IFTA) Clearinghouse	ADOT Electronic Bypass Stations	credentials information	Existing	Response containing full vehicle fuel tax and registration credentials information. "Response" may be provided in reaction to a real-time query or a standing request for updated information. The query flow is not explicitly shown.
International Fuel Tax Agreement (IFTA) Clearinghouse	ADOT Electronic Bypass Stations	credentials status information	Existing	Credentials information such as registration, licensing, insurance, check flags, and electronic screening enrollment data. A unique identifier is included. Corresponds to the credentials portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
International Fuel Tax Agreement (IFTA) Clearinghouse	ADOT Electronic Bypass Stations	cv driver record	Existing	Information typically maintained by a state driver licensing agency about a driver of a commercial vehicle including driver identification data, license data, permit data, and driving history details. The query flow is not explicitly shown.
International Fuel Tax Agreement (IFTA) Clearinghouse	ADOT Electronic Bypass Stations	safety status information	Existing	Safety information such as safety ratings, security ratings or flags, inspection summaries, and violation summaries. A unique identifier is included. Corresponds to the safety and security portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
International Fuel Tax Agreement (IFTA) Clearinghouse	ADOT Electronic Bypass Stations	targeted list	Existing	List of carriers, drivers, and/or vehicles of interest for enforcement purposes.
International Fuel Tax Agreement (IFTA) Clearinghouse	ADOT Motor Vehicle Division (MVD) Database	commercial vehicle archive data	Planned	Information describing commercial vehicle travel and commodity flow characteristics. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
International Fuel Tax Agreement (IFTA) Clearinghouse	ADOT MVD Commercial Vehicle Administration	accident report	Planned	Report of commercial vehicle safety accident. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
International Fuel Tax Agreement (IFTA) Clearinghouse	ADOT MVD Commercial Vehicle Administration	border clearance status	Existing	Notification regarding the crossing status of commercial freight shipment scheduled to enter the U.S. Includes portions of border agency and transportation agency clearance results, as those results become available.
International Fuel Tax Agreement (IFTA) Clearinghouse	ADOT MVD Commercial Vehicle Administration	citation	Planned	Report of commercial vehicle citation. The citation includes references to the statute(s) that was (were) violated. It includes information on the violator and the officer issuing the citation. A citation differs from a violation because it is adjudicated by the courts. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
International Fuel Tax Agreement (IFTA) Clearinghouse	ADOT MVD Commercial Vehicle Administration	commercial vehicle permit information	Planned	Information for commercial vehicle permits for oversize, overweight, or for dangerous goods. The query flow is not explicitly shown.
International Fuel Tax Agreement (IFTA) Clearinghouse	ADOT MVD Commercial Vehicle Administration	credential fee coordination	Planned	Description of fees, taxes and similar charges related to commercial vehicle credentials. In US and Canada, this includes rates for credentials that are exchanged between agencies via IRP, IFTA, etc.
International Fuel Tax Agreement (IFTA) Clearinghouse	ADOT MVD Commercial Vehicle Administration	credentials information	Existing	Response containing full vehicle fuel tax and registration credentials information. "Response" may be provided in reaction to a real-time query or a standing request for updated information. The query flow is not explicitly shown.
International Fuel Tax Agreement (IFTA) Clearinghouse	ADOT MVD Commercial Vehicle Administration	credentials status information	Existing	Credentials information such as registration, licensing, insurance, check flags, and electronic screening enrollment data. A unique identifier is included. Corresponds to the credentials portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
International Fuel Tax Agreement (IFTA) Clearinghouse	ADOT MVD Commercial Vehicle Administration	cv driver record	Planned	Information typically maintained by a state driver licensing agency about a driver of a commercial vehicle including driver identification data, license data, permit data, and driving history details. The query flow is not explicitly shown.
International Fuel Tax Agreement (IFTA) Clearinghouse	ADOT MVD Commercial Vehicle Administration	route restrictions	Planned	Information about routes, road segments, and areas that do not allow the transport of security sensitive hazmat cargoes or include other restrictions (such as height or weight limits).
International Fuel Tax Agreement (IFTA) Clearinghouse	ADOT MVD Commercial Vehicle Administration	safety status information	Existing	Safety information such as safety ratings, security ratings or flags, inspection summaries, and violation summaries. A unique identifier is included. Corresponds to the safety and security portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
International Fuel Tax Agreement (IFTA) Clearinghouse	ADOT TOC Traffic Information Center	commercial vehicle permit information	Planned	Information for commercial vehicle permits for oversize, overweight, or for dangerous goods. The query flow is not explicitly shown.
International Fuel Tax Agreement (IFTA) Clearinghouse	ADOT TOC Traffic Information Center	route restrictions	Planned	Information about routes, road segments, and areas that do not allow the transport of security sensitive hazmat cargoes or include other restrictions (such as height or weight limits).
International Fuel Tax Agreement (IFTA) Clearinghouse	ADOT WIM Stations	commercial vehicle permit information	Existing	Information for commercial vehicle permits for oversize, overweight, or for dangerous goods. The query flow is not explicitly shown.
International Fuel Tax Agreement (IFTA) Clearinghouse	ADOT WIM Stations	credentials information	Existing	Response containing full vehicle fuel tax and registration credentials information. "Response" may be provided in reaction to a real-time query or a standing request for updated information. The query flow is not explicitly shown.
International Fuel Tax Agreement (IFTA) Clearinghouse	ADOT WIM Stations	credentials status information	Existing	Credentials information such as registration, licensing, insurance, check flags, and electronic screening enrollment data. A unique identifier is included. Corresponds to the credentials portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
International Fuel Tax Agreement (IFTA) Clearinghouse	ADOT WIM Stations	cv driver record	Existing	Information typically maintained by a state driver licensing agency about a driver of a commercial vehicle including driver identification data, license data, permit data, and driving history details. The query flow is not explicitly shown.
International Fuel Tax Agreement (IFTA) Clearinghouse	ADOT WIM Stations	safety status information	Existing	Safety information such as safety ratings, security ratings or flags, inspection summaries, and violation summaries. A unique identifier is included. Corresponds to the safety and security portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
International Fuel Tax Agreement (IFTA) Clearinghouse	ADOT WIM Stations	targeted list	Existing	List of carriers, drivers, and/or vehicles of interest for enforcement purposes.
International Fuel Tax Agreement (IFTA) Clearinghouse	Commercial Vehicle Driver and Vehicle Verification Systems	accident report	Planned	Report of commercial vehicle safety accident. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
International Fuel Tax Agreement (IFTA) Clearinghouse	Commercial Vehicle Driver and Vehicle Verification Systems	border clearance status	Existing	Notification regarding the crossing status of commercial freight shipment scheduled to enter the U.S. Includes portions of border agency and transportation agency clearance results, as those results become available.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
International Fuel Tax Agreement (IFTA) Clearinghouse	Commercial Vehicle Driver and Vehicle Verification Systems	citation	Planned	Report of commercial vehicle citation. The citation includes references to the statute(s) that was (were) violated. It includes information on the violator and the officer issuing the citation. A citation differs from a violation because it is adjudicated by the courts. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
International Fuel Tax Agreement (IFTA) Clearinghouse	Commercial Vehicle Driver and Vehicle Verification Systems	commercial vehicle archive data	Existing	Information describing commercial vehicle travel and commodity flow characteristics. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
International Fuel Tax Agreement (IFTA) Clearinghouse	Commercial Vehicle Driver and Vehicle Verification Systems	commercial vehicle permit information	Planned	Information for commercial vehicle permits for oversize, overweight, or for dangerous goods. The query flow is not explicitly shown.
International Fuel Tax Agreement (IFTA) Clearinghouse	Commercial Vehicle Driver and Vehicle Verification Systems	credential fee coordination	Planned	Description of fees, taxes and similar charges related to commercial vehicle credentials. In US and Canada, this includes rates for credentials that are exchanged between agencies via IRP, IFTA, etc.
International Fuel Tax Agreement (IFTA) Clearinghouse	Commercial Vehicle Driver and Vehicle Verification Systems	credentials information	Planned	Response containing full vehicle fuel tax and registration credentials information. "Response" may be provided in reaction to a real-time query or a standing request for updated information. The query flow is not explicitly shown.
International Fuel Tax Agreement (IFTA) Clearinghouse	Commercial Vehicle Driver and Vehicle Verification Systems	credentials status information	Planned	Credentials information such as registration, licensing, insurance, check flags, and electronic screening enrollment data. A unique identifier is included. Corresponds to the credentials portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
International Fuel Tax Agreement (IFTA) Clearinghouse	Commercial Vehicle Driver and Vehicle Verification Systems	cv driver record	Planned	Information typically maintained by a state driver licensing agency about a driver of a commercial vehicle including driver identification data, license data, permit data, and driving history details. The query flow is not explicitly shown.
International Fuel Tax Agreement (IFTA) Clearinghouse	Commercial Vehicle Driver and Vehicle Verification Systems	route restrictions	Planned	Information about routes, road segments, and areas that do not allow the transport of security sensitive hazmat cargoes or include other restrictions (such as height or weight limits).
International Fuel Tax Agreement (IFTA) Clearinghouse	Commercial Vehicle Driver and Vehicle Verification Systems	safety status information	Planned	Safety information such as safety ratings, security ratings or flags, inspection summaries, and violation summaries. A unique identifier is included. Corresponds to the safety and security portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
International Fuel Tax Agreement (IFTA) Clearinghouse	Commercial Vehicles	safety inspection record	Planned	Record containing results of commercial vehicle safety inspection.
International Fuel Tax Agreement (IFTA) Clearinghouse	DEMA Data Archive	commercial vehicle archive data	Planned	Information describing commercial vehicle travel and commodity flow characteristics. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
International Fuel Tax Agreement (IFTA) Clearinghouse	DEMA Enforcement	citation	Existing	Report of commercial vehicle citation. The citation includes references to the statute(s) that was (were) violated. It includes information on the violator and the officer issuing the citation. A citation differs from a violation because it is adjudicated by the courts. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
International Fuel Tax Agreement (IFTA) Clearinghouse	DEMA Enforcement	commercial vehicle violation notification	Existing	Notification of a violation. The violation notification flow describes the statute or regulation that was violated and how it was violated (e. g., overweight on specific axle by xxx pounds or which brake was out of adjustment and how far out of adjustment it was). A violation differs from a citation because it is not adjudicated by the courts. It specifically includes the date/time and location of the violation and identification of the vehicle, driver, and associated equipment/cargo.
International Fuel Tax Agreement (IFTA) Clearinghouse	DPS Commercial Vehicle Enforcement	accident report	Planned	Report of commercial vehicle safety accident. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
International Fuel Tax Agreement (IFTA) Clearinghouse	DPS Commercial Vehicle Enforcement	border clearance status	Existing	Notification regarding the crossing status of commercial freight shipment scheduled to enter the U.S. Includes portions of border agency and transportation agency clearance results, as those results become available.
International Fuel Tax Agreement (IFTA) Clearinghouse	DPS Commercial Vehicle Enforcement	carrier participation report	Planned	Report that summarizes motor carrier participation in CVO programs. Used to identify the level of active participation and to report which enrolled carriers are not participating as expected.
International Fuel Tax Agreement (IFTA) Clearinghouse	DPS Commercial Vehicle Enforcement	citation	Existing	Report of commercial vehicle citation. The citation includes references to the statute(s) that was (were) violated. It includes information on the violator and the officer issuing the citation. A citation differs from a violation because it is adjudicated by the courts. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
International Fuel Tax Agreement (IFTA) Clearinghouse	DPS Commercial Vehicle Enforcement	commercial vehicle permit information	Planned	Information for commercial vehicle permits for oversize, overweight, or for dangerous goods. The query flow is not explicitly shown.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
International Fuel Tax Agreement (IFTA) Clearinghouse	DPS Commercial Vehicle Enforcement	commercial vehicle violation notification	Existing	Notification of a violation. The violation notification flow describes the statute or regulation that was violated and how it was violated (e. g., overweight on specific axle by xxx pounds or which brake was out of adjustment and how far out of adjustment it was). A violation differs from a citation because it is not adjudicated by the courts. It specifically includes the date/time and location of the violation and identification of the vehicle, driver, and associated equipment/cargo.
International Fuel Tax Agreement (IFTA) Clearinghouse	DPS Commercial Vehicle Enforcement	credential fee coordination	Planned	Description of fees, taxes and similar charges related to commercial vehicle credentials. In US and Canada, this includes rates for credentials that are exchanged between agencies via IRP, IFTA, etc.
International Fuel Tax Agreement (IFTA) Clearinghouse	DPS Commercial Vehicle Enforcement	credentials information	Existing	Response containing full vehicle fuel tax and registration credentials information. "Response" may be provided in reaction to a real-time query or a standing request for updated information. The query flow is not explicitly shown.
International Fuel Tax Agreement (IFTA) Clearinghouse	DPS Commercial Vehicle Enforcement	credentials status information	Existing	Credentials information such as registration, licensing, insurance, check flags, and electronic screening enrollment data. A unique identifier is included. Corresponds to the credentials portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
International Fuel Tax Agreement (IFTA) Clearinghouse	DPS Commercial Vehicle Enforcement	cv driver record	Planned	Information typically maintained by a state driver licensing agency about a driver of a commercial vehicle including driver identification data, license data, permit data, and driving history details. The query flow is not explicitly shown.
International Fuel Tax Agreement (IFTA) Clearinghouse	DPS Commercial Vehicle Enforcement	route restrictions	Planned	Information about routes, road segments, and areas that do not allow the transport of security sensitive hazmat cargoes or include other restrictions (such as height or weight limits).
International Fuel Tax Agreement (IFTA) Clearinghouse	DPS Commercial Vehicle Enforcement	safety status information	Existing	Safety information such as safety ratings, security ratings or flags, inspection summaries, and violation summaries. A unique identifier is included. Corresponds to the safety and security portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
International Fuel Tax Agreement (IFTA) Clearinghouse	DPS Data Archive	commercial vehicle archive data	Existing	Information describing commercial vehicle travel and commodity flow characteristics. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
International Fuel Tax Agreement (IFTA) Clearinghouse	DPS Roadside Safety Inspection	carrier participation report	Planned	Report that summarizes motor carrier participation in CVO programs. Used to identify the level of active participation and to report which enrolled carriers are not participating as expected.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
International Fuel Tax Agreement (IFTA) Clearinghouse	DPS Roadside Safety Inspection	citation	Existing	Report of commercial vehicle citation. The citation includes references to the statute(s) that was (were) violated. It includes information on the violator and the officer issuing the citation. A citation differs from a violation because it is adjudicated by the courts. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
International Fuel Tax Agreement (IFTA) Clearinghouse	DPS Roadside Safety Inspection	commercial vehicle permit information	Existing	Information for commercial vehicle permits for oversize, overweight, or for dangerous goods. The query flow is not explicitly shown.
International Fuel Tax Agreement (IFTA) Clearinghouse	DPS Roadside Safety Inspection	commercial vehicle violation notification	Existing	Notification of a violation. The violation notification flow describes the statute or regulation that was violated and how it was violated (e. g., overweight on specific axle by xxx pounds or which brake was out of adjustment and how far out of adjustment it was). A violation differs from a citation because it is not adjudicated by the courts. It specifically includes the date/time and location of the violation and identification of the vehicle, driver, and associated equipment/cargo.
International Fuel Tax Agreement (IFTA) Clearinghouse	DPS Roadside Safety Inspection	credentials information	Existing	Response containing full vehicle fuel tax and registration credentials information. "Response" may be provided in reaction to a real-time query or a standing request for updated information. The query flow is not explicitly shown.
International Fuel Tax Agreement (IFTA) Clearinghouse	DPS Roadside Safety Inspection	credentials status information	Existing	Credentials information such as registration, licensing, insurance, check flags, and electronic screening enrollment data. A unique identifier is included. Corresponds to the credentials portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
International Fuel Tax Agreement (IFTA) Clearinghouse	DPS Roadside Safety Inspection	cv driver record	Existing	Information typically maintained by a state driver licensing agency about a driver of a commercial vehicle including driver identification data, license data, permit data, and driving history details. The query flow is not explicitly shown.
International Fuel Tax Agreement (IFTA) Clearinghouse	DPS Roadside Safety Inspection	safety status information	Existing	Safety information such as safety ratings, security ratings or flags, inspection summaries, and violation summaries. A unique identifier is included. Corresponds to the safety and security portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
International Fuel Tax Agreement (IFTA) Clearinghouse	DPS Roadside Safety Inspection	targeted list	Existing	List of carriers, drivers, and/or vehicles of interest for enforcement purposes.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
International Fuel Tax Agreement (IFTA) Clearinghouse	Financial Institution	payment request	Planned	Request for payment from financial institution or related financial service requests (e.g., balance inquiry)
International Fuel Tax Agreement (IFTA) Clearinghouse	Fleet Management Systems	border clearance status	Existing	Notification regarding the crossing status of commercial freight shipment scheduled to enter the U.S. Includes portions of border agency and transportation agency clearance results, as those results become available.
International Fuel Tax Agreement (IFTA) Clearinghouse	Fleet Management Systems	citation	Existing	Report of commercial vehicle citation. The citation includes references to the statute(s) that was (were) violated. It includes information on the violator and the officer issuing the citation. A citation differs from a violation because it is adjudicated by the courts. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
International Fuel Tax Agreement (IFTA) Clearinghouse	Fleet Management Systems	commercial vehicle permit	Planned	Commercial vehicle permits including those for oversize, overweight, or hazmat shipments.
International Fuel Tax Agreement (IFTA) Clearinghouse	Fleet Management Systems	compliance review report	Planned	Report containing results of carrier compliance review, including concomitant out-of-service notifications, carrier warnings/notifications. The information may be provided as a response to a real-time query of proactively by the source. The query flow is not explicitly shown.
International Fuel Tax Agreement (IFTA) Clearinghouse	Fleet Management Systems	credentials information	Planned	Response containing full vehicle fuel tax and registration credentials information. "Response" may be provided in reaction to a real-time query or a standing request for updated information. The query flow is not explicitly shown.
International Fuel Tax Agreement (IFTA) Clearinghouse	Fleet Management Systems	credentials status information	Planned	Credentials information such as registration, licensing, insurance, check flags, and electronic screening enrollment data. A unique identifier is included. Corresponds to the credentials portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
International Fuel Tax Agreement (IFTA) Clearinghouse	Fleet Management Systems	cv driver record	Planned	Information typically maintained by a state driver licensing agency about a driver of a commercial vehicle including driver identification data, license data, permit data, and driving history details. The query flow is not explicitly shown.
International Fuel Tax Agreement (IFTA) Clearinghouse	Fleet Management Systems	route restrictions	Planned	Information about routes, road segments, and areas that do not allow the transport of security sensitive hazmat cargoes or include other restrictions (such as height or weight limits).

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
International Fuel Tax Agreement (IFTA) Clearinghouse	Fleet Management Systems	safety status information	Planned	Safety information such as safety ratings, security ratings or flags, inspection summaries, and violation summaries. A unique identifier is included. Corresponds to the safety and security portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
International Fuel Tax Agreement (IFTA) Clearinghouse	Fleet Management Systems	trigger area	Planned	A geographic area a commercial motor vehicle crosses into, which initiates a request to compile and transmit a safety data message. May be associated with a time period.
International Fuel Tax Agreement (IFTA) Clearinghouse	Fleet Management Systems	trigger area notification	Planned	Notification to activate wireless roadside inspection safety data message collection.
International Fuel Tax Agreement (IFTA) Clearinghouse	Freight Shipping System	border clearance status	Existing	Notification regarding the crossing status of commercial freight shipment scheduled to enter the U.S. Includes portions of border agency and transportation agency clearance results, as those results become available.
International Fuel Tax Agreement (IFTA) Clearinghouse	International Registration Plan (IRP) Clearinghouse	accident report	Planned	Report of commercial vehicle safety accident. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
International Fuel Tax Agreement (IFTA) Clearinghouse	International Registration Plan (IRP) Clearinghouse	border clearance status	Existing	Notification regarding the crossing status of commercial freight shipment scheduled to enter the U.S. Includes portions of border agency and transportation agency clearance results, as those results become available.
International Fuel Tax Agreement (IFTA) Clearinghouse	International Registration Plan (IRP) Clearinghouse	citation	Planned	Report of commercial vehicle citation. The citation includes references to the statute(s) that was (were) violated. It includes information on the violator and the officer issuing the citation. A citation differs from a violation because it is adjudicated by the courts. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
International Fuel Tax Agreement (IFTA) Clearinghouse	International Registration Plan (IRP) Clearinghouse	commercial vehicle permit information	Planned	Information for commercial vehicle permits for oversize, overweight, or for dangerous goods. The query flow is not explicitly shown.
International Fuel Tax Agreement (IFTA) Clearinghouse	International Registration Plan (IRP) Clearinghouse	credential fee coordination	Planned	Description of fees, taxes and similar charges related to commercial vehicle credentials. In US and Canada, this includes rates for credentials that are exchanged between agencies via IRP, IFTA, etc.
International Fuel Tax Agreement (IFTA) Clearinghouse	International Registration Plan (IRP) Clearinghouse	credentials information	Existing	Response containing full vehicle fuel tax and registration credentials information. "Response" may be provided in reaction to a real-time query or a standing request for updated information. The query flow is not explicitly shown.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
International Fuel Tax Agreement (IFTA) Clearinghouse	International Registration Plan (IRP) Clearinghouse	credentials status information	Existing	Credentials information such as registration, licensing, insurance, check flags, and electronic screening enrollment data. A unique identifier is included. Corresponds to the credentials portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
International Fuel Tax Agreement (IFTA) Clearinghouse	International Registration Plan (IRP) Clearinghouse	cv driver record	Planned	Information typically maintained by a state driver licensing agency about a driver of a commercial vehicle including driver identification data, license data, permit data, and driving history details. The query flow is not explicitly shown.
International Fuel Tax Agreement (IFTA) Clearinghouse	International Registration Plan (IRP) Clearinghouse	route restrictions	Planned	Information about routes, road segments, and areas that do not allow the transport of security sensitive hazmat cargoes or include other restrictions (such as height or weight limits).
International Fuel Tax Agreement (IFTA) Clearinghouse	International Registration Plan (IRP) Clearinghouse	safety status information	Existing	Safety information such as safety ratings, security ratings or flags, inspection summaries, and violation summaries. A unique identifier is included. Corresponds to the safety and security portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
International Fuel Tax Agreement (IFTA) Clearinghouse	POE Administration Center	border clearance status	Existing	Notification regarding the crossing status of commercial freight shipment scheduled to enter the U.S. Includes portions of border agency and transportation agency clearance results, as those results become available.
International Fuel Tax Agreement (IFTA) Clearinghouse	POE Administration Center	client verification information	Existing	Information about carriers who have made border credential applications such as commercial drivers license information and carrier safety status.
International Fuel Tax Agreement (IFTA) Clearinghouse	POE Administration Center	screening results	Existing	Results of commercial vehicle screening event at a border crossing - reports clearance event data regarding action taken at border, including acceptance or override of system decision, and date/time stamp.
International Fuel Tax Agreement (IFTA) Clearinghouse	POE Data Archive	commercial vehicle archive data	Planned	Information describing commercial vehicle travel and commodity flow characteristics. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
International Fuel Tax Agreement (IFTA) Clearinghouse	Safety Fitness Electronic Record (SAFER)	citation	Existing	Report of commercial vehicle citation. The citation includes references to the statute(s) that was (were) violated. It includes information on the violator and the officer issuing the citation. A citation differs from a violation because it is adjudicated by the courts. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
International Fuel Tax Agreement (IFTA) Clearinghouse	Safety Fitness Electronic Record (SAFER)	commercial vehicle permit information	Planned	Information for commercial vehicle permits for oversize, overweight, or for dangerous goods. The query flow is not explicitly shown.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
International Fuel Tax Agreement (IFTA) Clearinghouse	Safety Fitness Electronic Record (SAFER)	commercial vehicle violation notification	Existing	Notification of a violation. The violation notification flow describes the statute or regulation that was violated and how it was violated (e. g., overweight on specific axle by xxx pounds or which brake was out of adjustment and how far out of adjustment it was). A violation differs from a citation because it is not adjudicated by the courts. It specifically includes the date/time and location of the violation and identification of the vehicle, driver, and associated equipment/cargo.
International Fuel Tax Agreement (IFTA) Clearinghouse	Safety Fitness Electronic Record (SAFER)	credentials information	Existing	Response containing full vehicle fuel tax and registration credentials information. "Response" may be provided in reaction to a real-time query or a standing request for updated information. The query flow is not explicitly shown.
International Fuel Tax Agreement (IFTA) Clearinghouse	Safety Fitness Electronic Record (SAFER)	credentials status information	Existing	Credentials information such as registration, licensing, insurance, check flags, and electronic screening enrollment data. A unique identifier is included. Corresponds to the credentials portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
International Fuel Tax Agreement (IFTA) Clearinghouse	Safety Fitness Electronic Record (SAFER)	safety status information	Existing	Safety information such as safety ratings, security ratings or flags, inspection summaries, and violation summaries. A unique identifier is included. Corresponds to the safety and security portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	ADOT ECD CVO Administration Center	credentials information	Existing	Response containing full vehicle fuel tax and registration credentials information. "Response" may be provided in reaction to a real-time query or a standing request for updated information. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	ADOT ECD CVO Administration Center	credentials status information	Existing	Credentials information such as registration, licensing, insurance, check flags, and electronic screening enrollment data. A unique identifier is included. Corresponds to the credentials portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
International Registration Plan (IRP) Clearinghouse	ADOT ECD CVO Administration Center	safety status information	Existing	Safety information such as safety ratings, security ratings or flags, inspection summaries, and violation summaries. A unique identifier is included. Corresponds to the safety and security portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	ADOT Electronic Bypass Stations	commercial vehicle permit information	Existing	Information for commercial vehicle permits for oversize, overweight, or for dangerous goods. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	ADOT Electronic Bypass Stations	credentials information	Existing	Response containing full vehicle fuel tax and registration credentials information. "Response" may be provided in reaction to a real-time query or a standing request for updated information. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	ADOT Electronic Bypass Stations	credentials status information	Existing	Credentials information such as registration, licensing, insurance, check flags, and electronic screening enrollment data. A unique identifier is included. Corresponds to the credentials portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	ADOT Electronic Bypass Stations	cv driver record	Existing	Information typically maintained by a state driver licensing agency about a driver of a commercial vehicle including driver identification data, license data, permit data, and driving history details. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	ADOT Electronic Bypass Stations	safety status information	Existing	Safety information such as safety ratings, security ratings or flags, inspection summaries, and violation summaries. A unique identifier is included. Corresponds to the safety and security portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	ADOT Electronic Bypass Stations	targeted list	Existing	List of carriers, drivers, and/or vehicles of interest for enforcement purposes.
International Registration Plan (IRP) Clearinghouse	ADOT Motor Vehicle Division (MVD) Database	commercial vehicle archive data	Existing	Information describing commercial vehicle travel and commodity flow characteristics. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
International Registration Plan (IRP) Clearinghouse	ADOT MVD Commercial Vehicle Administration	accident report	Planned	Report of commercial vehicle safety accident. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
International Registration Plan (IRP) Clearinghouse	ADOT MVD Commercial Vehicle Administration	border clearance status	Existing	Notification regarding the crossing status of commercial freight shipment scheduled to enter the U.S. Includes portions of border agency and transportation agency clearance results, as those results become available.
International Registration Plan (IRP) Clearinghouse	ADOT MVD Commercial Vehicle Administration	citation	Planned	Report of commercial vehicle citation. The citation includes references to the statute(s) that was (were) violated. It includes information on the violator and the officer issuing the citation. A citation differs from a violation because it is adjudicated by the courts. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	ADOT MVD Commercial Vehicle Administration	commercial vehicle permit information	Planned	Information for commercial vehicle permits for oversize, overweight, or for dangerous goods. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	ADOT MVD Commercial Vehicle Administration	credential fee coordination	Planned	Description of fees, taxes and similar charges related to commercial vehicle credentials. In US and Canada, this includes rates for credentials that are exchanged between agencies via IRP, IFTA, etc.
International Registration Plan (IRP) Clearinghouse	ADOT MVD Commercial Vehicle Administration	credentials information	Existing	Response containing full vehicle fuel tax and registration credentials information. "Response" may be provided in reaction to a real-time query or a standing request for updated information. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	ADOT MVD Commercial Vehicle Administration	credentials status information	Existing	Credentials information such as registration, licensing, insurance, check flags, and electronic screening enrollment data. A unique identifier is included. Corresponds to the credentials portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	ADOT MVD Commercial Vehicle Administration	cv driver record	Planned	Information typically maintained by a state driver licensing agency about a driver of a commercial vehicle including driver identification data, license data, permit data, and driving history details. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	ADOT MVD Commercial Vehicle Administration	route restrictions	Planned	Information about routes, road segments, and areas that do not allow the transport of security sensitive hazmat cargoes or include other restrictions (such as height or weight limits).
International Registration Plan (IRP) Clearinghouse	ADOT MVD Commercial Vehicle Administration	safety inspection report	Existing	Report containing results of commercial vehicle safety inspection. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	ADOT MVD Commercial Vehicle Administration	safety status information	Existing	Safety information such as safety ratings, security ratings or flags, inspection summaries, and violation summaries. A unique identifier is included. Corresponds to the safety and security portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
International Registration Plan (IRP) Clearinghouse	ADOT WIM Stations	commercial vehicle permit information	Existing	Information for commercial vehicle permits for oversize, overweight, or for dangerous goods. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	ADOT WIM Stations	credentials information	Existing	Response containing full vehicle fuel tax and registration credentials information. "Response" may be provided in reaction to a real-time query or a standing request for updated information. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	ADOT WIM Stations	credentials status information	Existing	Credentials information such as registration, licensing, insurance, check flags, and electronic screening enrollment data. A unique identifier is included. Corresponds to the credentials portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	ADOT WIM Stations	cv driver record	Existing	Information typically maintained by a state driver licensing agency about a driver of a commercial vehicle including driver identification data, license data, permit data, and driving history details. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	ADOT WIM Stations	safety status information	Existing	Safety information such as safety ratings, security ratings or flags, inspection summaries, and violation summaries. A unique identifier is included. Corresponds to the safety and security portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	ADOT WIM Stations	targeted list	Existing	List of carriers, drivers, and/or vehicles of interest for enforcement purposes.
International Registration Plan (IRP) Clearinghouse	Commercial Vehicle Driver and Vehicle Verification Systems	accident report	Planned	Report of commercial vehicle safety accident. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	Commercial Vehicle Driver and Vehicle Verification Systems	border clearance status	Existing	Notification regarding the crossing status of commercial freight shipment scheduled to enter the U.S. Includes portions of border agency and transportation agency clearance results, as those results become available.
International Registration Plan (IRP) Clearinghouse	Commercial Vehicle Driver and Vehicle Verification Systems	citation	Planned	Report of commercial vehicle citation. The citation includes references to the statute(s) that was (were) violated. It includes information on the violator and the officer issuing the citation. A citation differs from a violation because it is adjudicated by the courts. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	Commercial Vehicle Driver and Vehicle Verification Systems	commercial vehicle archive data	Existing	Information describing commercial vehicle travel and commodity flow characteristics. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
International Registration Plan (IRP) Clearinghouse	Commercial Vehicle Driver and Vehicle Verification Systems	commercial vehicle permit information	Planned	Information for commercial vehicle permits for oversize, overweight, or for dangerous goods. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	Commercial Vehicle Driver and Vehicle Verification Systems	credential fee coordination	Planned	Description of fees, taxes and similar charges related to commercial vehicle credentials. In US and Canada, this includes rates for credentials that are exchanged between agencies via IRP, IFTA, etc.
International Registration Plan (IRP) Clearinghouse	Commercial Vehicle Driver and Vehicle Verification Systems	credentials information	Existing	Response containing full vehicle fuel tax and registration credentials information. "Response" may be provided in reaction to a real-time query or a standing request for updated information. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	Commercial Vehicle Driver and Vehicle Verification Systems	credentials status information	Existing	Credentials information such as registration, licensing, insurance, check flags, and electronic screening enrollment data. A unique identifier is included. Corresponds to the credentials portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	Commercial Vehicle Driver and Vehicle Verification Systems	cv driver record	Planned	Information typically maintained by a state driver licensing agency about a driver of a commercial vehicle including driver identification data, license data, permit data, and driving history details. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	Commercial Vehicle Driver and Vehicle Verification Systems	route restrictions	Planned	Information about routes, road segments, and areas that do not allow the transport of security sensitive hazmat cargoes or include other restrictions (such as height or weight limits).
International Registration Plan (IRP) Clearinghouse	Commercial Vehicle Driver and Vehicle Verification Systems	safety inspection report	Existing	Report containing results of commercial vehicle safety inspection. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	Commercial Vehicle Driver and Vehicle Verification Systems	safety status information	Existing	Safety information such as safety ratings, security ratings or flags, inspection summaries, and violation summaries. A unique identifier is included. Corresponds to the safety and security portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	Commercial Vehicles	safety inspection record	Planned	Record containing results of commercial vehicle safety inspection.
International Registration Plan (IRP) Clearinghouse	DPS Commercial Vehicle Enforcement	accident report	Planned	Report of commercial vehicle safety accident. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	DPS Commercial Vehicle Enforcement	carrier participation report	Planned	Report that summarizes motor carrier participation in CVO programs. Used to identify the level of active participation and to report which enrolled carriers are not participating as expected.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
International Registration Plan (IRP) Clearinghouse	DPS Commercial Vehicle Enforcement	citation	Existing	Report of commercial vehicle citation. The citation includes references to the statute(s) that was (were) violated. It includes information on the violator and the officer issuing the citation. A citation differs from a violation because it is adjudicated by the courts. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	DPS Commercial Vehicle Enforcement	commercial vehicle permit information	Planned	Information for commercial vehicle permits for oversize, overweight, or for dangerous goods. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	DPS Commercial Vehicle Enforcement	commercial vehicle violation notification	Existing	Notification of a violation. The violation notification flow describes the statute or regulation that was violated and how it was violated (e. g., overweight on specific axle by xxx pounds or which brake was out of adjustment and how far out of adjustment it was). A violation differs from a citation because it is not adjudicated by the courts. It specifically includes the date/time and location of the violation and identification of the vehicle, driver, and associated equipment/cargo.
International Registration Plan (IRP) Clearinghouse	DPS Commercial Vehicle Enforcement	credential fee coordination	Planned	Description of fees, taxes and similar charges related to commercial vehicle credentials. In US and Canada, this includes rates for credentials that are exchanged between agencies via IRP, IFTA, etc.
International Registration Plan (IRP) Clearinghouse	DPS Commercial Vehicle Enforcement	credentials information	Existing	Response containing full vehicle fuel tax and registration credentials information. "Response" may be provided in reaction to a real-time query or a standing request for updated information. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	DPS Commercial Vehicle Enforcement	credentials status information	Existing	Credentials information such as registration, licensing, insurance, check flags, and electronic screening enrollment data. A unique identifier is included. Corresponds to the credentials portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	DPS Commercial Vehicle Enforcement	cv driver record	Planned	Information typically maintained by a state driver licensing agency about a driver of a commercial vehicle including driver identification data, license data, permit data, and driving history details. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	DPS Commercial Vehicle Enforcement	route restrictions	Planned	Information about routes, road segments, and areas that do not allow the transport of security sensitive hazmat cargoes or include other restrictions (such as height or weight limits).
International Registration Plan (IRP) Clearinghouse	DPS Commercial Vehicle Enforcement	safety status information	Existing	Safety information such as safety ratings, security ratings or flags, inspection summaries, and violation summaries. A unique identifier is included. Corresponds to the safety and security portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
International Registration Plan (IRP) Clearinghouse	DPS Roadside Safety Inspection	accident report	Existing	Report of commercial vehicle safety accident. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	DPS Roadside Safety Inspection	carrier participation report	Existing	Report that summarizes motor carrier participation in CVO programs. Used to identify the level of active participation and to report which enrolled carriers are not participating as expected.
International Registration Plan (IRP) Clearinghouse	DPS Roadside Safety Inspection	citation	Existing	Report of commercial vehicle citation. The citation includes references to the statute(s) that was (were) violated. It includes information on the violator and the officer issuing the citation. A citation differs from a violation because it is adjudicated by the courts. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	DPS Roadside Safety Inspection	commercial vehicle permit information	Existing	Information for commercial vehicle permits for oversize, overweight, or for dangerous goods. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	DPS Roadside Safety Inspection	commercial vehicle violation notification	Existing	Notification of a violation. The violation notification flow describes the statute or regulation that was violated and how it was violated (e. g., overweight on specific axle by xxx pounds or which brake was out of adjustment and how far out of adjustment it was). A violation differs from a citation because it is not adjudicated by the courts. It specifically includes the date/time and location of the violation and identification of the vehicle, driver, and associated equipment/cargo.
International Registration Plan (IRP) Clearinghouse	DPS Roadside Safety Inspection	credentials information	Existing	Response containing full vehicle fuel tax and registration credentials information. "Response" may be provided in reaction to a real-time query or a standing request for updated information. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	DPS Roadside Safety Inspection	credentials status information	Existing	Credentials information such as registration, licensing, insurance, check flags, and electronic screening enrollment data. A unique identifier is included. Corresponds to the credentials portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	DPS Roadside Safety Inspection	cv driver record	Existing	Information typically maintained by a state driver licensing agency about a driver of a commercial vehicle including driver identification data, license data, permit data, and driving history details. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	DPS Roadside Safety Inspection	daily site activity data	Existing	Record of daily activities at commercial vehicle check stations including summaries of screening events and inspections.
International Registration Plan (IRP) Clearinghouse	DPS Roadside Safety Inspection	safety inspection report	Existing	Report containing results of commercial vehicle safety inspection. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
International Registration Plan (IRP) Clearinghouse	DPS Roadside Safety Inspection	safety status information	Existing	Safety information such as safety ratings, security ratings or flags, inspection summaries, and violation summaries. A unique identifier is included. Corresponds to the safety and security portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	DPS Roadside Safety Inspection	targeted list	Existing	List of carriers, drivers, and/or vehicles of interest for enforcement purposes.
International Registration Plan (IRP) Clearinghouse	Financial Institution	payment request	Planned	Request for payment from financial institution or related financial service requests (e.g., balance inquiry)
International Registration Plan (IRP) Clearinghouse	Fleet Management Systems	border clearance status	Existing	Notification regarding the crossing status of commercial freight shipment scheduled to enter the U.S. Includes portions of border agency and transportation agency clearance results, as those results become available.
International Registration Plan (IRP) Clearinghouse	Fleet Management Systems	citation	Planned	Report of commercial vehicle citation. The citation includes references to the statute(s) that was (were) violated. It includes information on the violator and the officer issuing the citation. A citation differs from a violation because it is adjudicated by the courts. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	Fleet Management Systems	commercial vehicle permit	Planned	Commercial vehicle permits including those for oversize, overweight, or hazmat shipments.
International Registration Plan (IRP) Clearinghouse	Fleet Management Systems	compliance review report	Planned	Report containing results of carrier compliance review, including concomitant out-of-service notifications, carrier warnings/notifications. The information may be provided as a response to a real-time query of proactively by the source. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	Fleet Management Systems	credentials information	Planned	Response containing full vehicle fuel tax and registration credentials information. "Response" may be provided in reaction to a real-time query or a standing request for updated information. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	Fleet Management Systems	credentials status information	Planned	Credentials information such as registration, licensing, insurance, check flags, and electronic screening enrollment data. A unique identifier is included. Corresponds to the credentials portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	Fleet Management Systems	cv driver record	Planned	Information typically maintained by a state driver licensing agency about a driver of a commercial vehicle including driver identification data, license data, permit data, and driving history details. The query flow is not explicitly shown.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
International Registration Plan (IRP) Clearinghouse	Fleet Management Systems	route restrictions	Planned	Information about routes, road segments, and areas that do not allow the transport of security sensitive hazmat cargoes or include other restrictions (such as height or weight limits).
International Registration Plan (IRP) Clearinghouse	Fleet Management Systems	safety status information	Planned	Safety information such as safety ratings, security ratings or flags, inspection summaries, and violation summaries. A unique identifier is included. Corresponds to the safety and security portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	Fleet Management Systems	trigger area	Planned	A geographic area a commercial motor vehicle crosses into, which initiates a request to compile and transmit a safety data message. May be associated with a time period.
International Registration Plan (IRP) Clearinghouse	Fleet Management Systems	trigger area notification	Planned	Notification to activate wireless roadside inspection safety data message collection.
International Registration Plan (IRP) Clearinghouse	Freight Shipping System	border clearance status	Existing	Notification regarding the crossing status of commercial freight shipment scheduled to enter the U.S. Includes portions of border agency and transportation agency clearance results, as those results become available.
International Registration Plan (IRP) Clearinghouse	International Fuel Tax Agreement (IFTA) Clearinghouse	accident report	Planned	Report of commercial vehicle safety accident. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	International Fuel Tax Agreement (IFTA) Clearinghouse	border clearance status	Existing	Notification regarding the crossing status of commercial freight shipment scheduled to enter the U.S. Includes portions of border agency and transportation agency clearance results, as those results become available.
International Registration Plan (IRP) Clearinghouse	International Fuel Tax Agreement (IFTA) Clearinghouse	citation	Planned	Report of commercial vehicle citation. The citation includes references to the statute(s) that was (were) violated. It includes information on the violator and the officer issuing the citation. A citation differs from a violation because it is adjudicated by the courts. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	International Fuel Tax Agreement (IFTA) Clearinghouse	commercial vehicle permit information	Planned	Information for commercial vehicle permits for oversize, overweight, or for dangerous goods. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	International Fuel Tax Agreement (IFTA) Clearinghouse	credential fee coordination	Planned	Description of fees, taxes and similar charges related to commercial vehicle credentials. In US and Canada, this includes rates for credentials that are exchanged between agencies via IRP, IFTA, etc.
International Registration Plan (IRP) Clearinghouse	International Fuel Tax Agreement (IFTA) Clearinghouse	credentials information	Existing	Response containing full vehicle fuel tax and registration credentials information. "Response" may be provided in reaction to a real-time query or a standing request for updated information. The query flow is not explicitly shown.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
International Registration Plan (IRP) Clearinghouse	International Fuel Tax Agreement (IFTA) Clearinghouse	credentials status information	Existing	Credentials information such as registration, licensing, insurance, check flags, and electronic screening enrollment data. A unique identifier is included. Corresponds to the credentials portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	International Fuel Tax Agreement (IFTA) Clearinghouse	cv driver record	Planned	Information typically maintained by a state driver licensing agency about a driver of a commercial vehicle including driver identification data, license data, permit data, and driving history details. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	International Fuel Tax Agreement (IFTA) Clearinghouse	route restrictions	Planned	Information about routes, road segments, and areas that do not allow the transport of security sensitive hazmat cargoes or include other restrictions (such as height or weight limits).
International Registration Plan (IRP) Clearinghouse	International Fuel Tax Agreement (IFTA) Clearinghouse	safety status information	Existing	Safety information such as safety ratings, security ratings or flags, inspection summaries, and violation summaries. A unique identifier is included. Corresponds to the safety and security portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	POE Administration Center	border clearance status	Existing	Notification regarding the crossing status of commercial freight shipment scheduled to enter the U.S. Includes portions of border agency and transportation agency clearance results, as those results become available.
International Registration Plan (IRP) Clearinghouse	POE Administration Center	client verification information	Existing	Information about carriers who have made border credential applications such as commercial drivers license information and carrier safety status.
International Registration Plan (IRP) Clearinghouse	POE Administration Center	manifest data	Existing	Identifies Port of Entry, date, and information on carrier and goods, origin, etc.
International Registration Plan (IRP) Clearinghouse	POE Administration Center	screening results	Existing	Results of commercial vehicle screening event at a border crossing - reports clearance event data regarding action taken at border, including acceptance or override of system decision, and date/time stamp.
International Registration Plan (IRP) Clearinghouse	POE Data Archive	commercial vehicle archive data	Planned	Information describing commercial vehicle travel and commodity flow characteristics. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
International Registration Plan (IRP) Clearinghouse	Safety Fitness Electronic Record (SAFER)	accident report	Existing	Report of commercial vehicle safety accident. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	Safety Fitness Electronic Record (SAFER)	border clearance status	Existing	Notification regarding the crossing status of commercial freight shipment scheduled to enter the U.S. Includes portions of border agency and transportation agency clearance results, as those results become available.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
International Registration Plan (IRP) Clearinghouse	Safety Fitness Electronic Record (SAFER)	citation	Existing	Report of commercial vehicle citation. The citation includes references to the statute(s) that was (were) violated. It includes information on the violator and the officer issuing the citation. A citation differs from a violation because it is adjudicated by the courts. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	Safety Fitness Electronic Record (SAFER)	commercial vehicle permit information	Existing	Information for commercial vehicle permits for oversize, overweight, or for dangerous goods. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	Safety Fitness Electronic Record (SAFER)	commercial vehicle violation notification	Existing	Notification of a violation. The violation notification flow describes the statute or regulation that was violated and how it was violated (e. g., overweight on specific axle by xxx pounds or which brake was out of adjustment and how far out of adjustment it was). A violation differs from a citation because it is not adjudicated by the courts. It specifically includes the date/time and location of the violation and identification of the vehicle, driver, and associated equipment/cargo.
International Registration Plan (IRP) Clearinghouse	Safety Fitness Electronic Record (SAFER)	credentials information	Existing	Response containing full vehicle fuel tax and registration credentials information. "Response" may be provided in reaction to a real-time query or a standing request for updated information. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	Safety Fitness Electronic Record (SAFER)	credentials status information	Existing	Credentials information such as registration, licensing, insurance, check flags, and electronic screening enrollment data. A unique identifier is included. Corresponds to the credentials portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	Safety Fitness Electronic Record (SAFER)	daily site activity data	Existing	Record of daily activities at commercial vehicle check stations including summaries of screening events and inspections.
International Registration Plan (IRP) Clearinghouse	Safety Fitness Electronic Record (SAFER)	safety inspection report	Existing	Report containing results of commercial vehicle safety inspection. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
International Registration Plan (IRP) Clearinghouse	Safety Fitness Electronic Record (SAFER)	safety status information	Existing	Safety information such as safety ratings, security ratings or flags, inspection summaries, and violation summaries. A unique identifier is included. Corresponds to the safety and security portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
Local Dial-A-Ride Transit Dispatchers	Cities and Towns EOC-EMC	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Local Dial-A-Ride Transit Dispatchers	Cities and Towns EOC-EMC	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Local Dial-A-Ride Transit Dispatchers	Cities and Towns EOC-EMC	emergency transit schedule information	Existing	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
Local Dial-A-Ride Transit Dispatchers	Cities and Towns EOC-EMC	emergency transit service response	Existing	Response indicating changes to transit service, fares, and/or restrictions that will be made and status of transit resources to be deployed to support emergency response and/or evacuation.
Local Dial-A-Ride Transit Dispatchers	Cities and Towns EOC-EMC	transit system status assessment	Planned	Assessment of damage sustained by the public transportation system including location and extent of the damage, current operational status including an estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Local Dial-A-Ride Transit Dispatchers	Cities and Towns Police and Fire Dispatch	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
Local Dial-A-Ride Transit Dispatchers	Cities and Towns Police and Fire Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Local Dial-A-Ride Transit Dispatchers	Cities and Towns Police and Fire Dispatch	emergency transit schedule information	Existing	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
Local Dial-A-Ride Transit Dispatchers	Cities and Towns Police and Fire Dispatch	emergency transit service response	Existing	Response indicating changes to transit service, fares, and/or restrictions that will be made and status of transit resources to be deployed to support emergency response and/or evacuation.
Local Dial-A-Ride Transit Dispatchers	Cities and Towns Police and Fire Dispatch	transit system status assessment	Planned	Assessment of damage sustained by the public transportation system including location and extent of the damage, current operational status including an estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Local Dial-A-Ride Transit Dispatchers	Cities and Towns TIC and Website	emergency transit schedule information	Existing	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
Local Dial-A-Ride Transit Dispatchers	Cities and Towns Transit Dispatch	transit fare coordination	Planned	Fare and pricing information shared between local/regional transit organizations.
Local Dial-A-Ride Transit Dispatchers	Cities and Towns Transit Dispatch	transit service coordination	Existing	Schedule coordination or AVL information shared between local/regional transit organizations. This includes coordination of connections and control parameters between transit properties as well as coordination of transit-related maintenance activities.
Local Dial-A-Ride Transit Dispatchers	Cities and Towns Transit Vehicles	transit stop request	Planned	Notification that a transit stop has been requested by a transit user at a roadside stop. This flow identifies the route, stop, and the time of the request.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Local Dial-A-Ride Transit Dispatchers	County EMC-EOC	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
Local Dial-A-Ride Transit Dispatchers	County EMC-EOC	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Local Dial-A-Ride Transit Dispatchers	County EMC-EOC	emergency transit schedule information	Existing	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
Local Dial-A-Ride Transit Dispatchers	County EMC-EOC	emergency transit service response	Existing	Response indicating changes to transit service, fares, and/or restrictions that will be made and status of transit resources to be deployed to support emergency response and/or evacuation.
Local Dial-A-Ride Transit Dispatchers	County EMC-EOC	transit system status assessment	Planned	Assessment of damage sustained by the public transportation system including location and extent of the damage, current operational status including an estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Local Dial-A-Ride Transit Dispatchers	County Transit Kiosks	transit traveler information	Planned	Transit information prepared to support transit users and other travelers. It contains transit schedules, real-time arrival information, fare schedules, alerts and advisories, and general transit service information.
Local Dial-A-Ride Transit Dispatchers	County Website and NIXLE	emergency transit schedule information	Planned	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
Local Dial-A-Ride Transit Dispatchers	County Website and NIXLE	transit service coordination	Planned	Schedule coordination or AVL information shared between local/regional transit organizations. This includes coordination of connections and control parameters between transit properties as well as coordination of transit-related maintenance activities.
Local Dial-A-Ride Transit Dispatchers	DEMA SEOC Arizona DEM Military Affairs	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
Local Dial-A-Ride Transit Dispatchers	DEMA SEOC Arizona DEM Military Affairs	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Local Dial-A-Ride Transit Dispatchers	DEMA SEOC Arizona DEM Military Affairs	emergency transit schedule information	Existing	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
Local Dial-A-Ride Transit Dispatchers	DEMA SEOC Arizona DEM Military Affairs	emergency transit service response	Existing	Response indicating changes to transit service, fares, and/or restrictions that will be made and status of transit resources to be deployed to support emergency response and/or evacuation.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Local Dial-A-Ride Transit Dispatchers	DEMA SEOC Arizona DEM Military Affairs	transit system status assessment	Planned	Assessment of damage sustained by the public transportation system including location and extent of the damage, current operational status including an estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Local Dial-A-Ride Transit Dispatchers	Financial Institution	payment request	Planned	Request for payment from financial institution or related financial service requests (e.g., balance inquiry)
Local Dial-A-Ride Transit Dispatchers	Independent School District Bus Dispatch	transit service coordination	Planned	Schedule coordination or AVL information shared between local/regional transit organizations. This includes coordination of connections and control parameters between transit properties as well as coordination of transit-related maintenance activities.
Local Dial-A-Ride Transit Dispatchers	Local Dial-A-Ride Transit Vehicles	alarm acknowledge	Existing	Confirmation that alarm was received, instructions and additional information for the alarm initiator, and requests for additional information.
Local Dial-A-Ride Transit Dispatchers	Local Dial-A-Ride Transit Vehicles	authorization response	Planned	Notification of status of authorization request.
Local Dial-A-Ride Transit Dispatchers	Local Dial-A-Ride Transit Vehicles	fare management information	Existing	Transit fare information and transaction data used to manage transit fare processing.
Local Dial-A-Ride Transit Dispatchers	Local Dial-A-Ride Transit Vehicles	remote vehicle disable	Existing	Signal used to remotely disable a transit vehicle.
Local Dial-A-Ride Transit Dispatchers	Local Dial-A-Ride Transit Vehicles	transit stop request	Planned	Notification that a transit stop has been requested by a transit user at a roadside stop. This flow identifies the route, stop, and the time of the request.
Local Dial-A-Ride Transit Dispatchers	Local Dial-A-Ride Transit Vehicles	transit traveler information	Planned	Transit information prepared to support transit users and other travelers. It contains transit schedules, real-time arrival information, fare schedules, alerts and advisories, and general transit service information.
Local Dial-A-Ride Transit Dispatchers	Local Dial-A-Ride Transit Vehicles	transit vehicle operator authentication update	Existing	Results of authentication process or update of on-board authentication database.
Local Dial-A-Ride Transit Dispatchers	Local Dial-A-Ride Transit Vehicles	transit vehicle operator information	Existing	Transit service instructions, wide area alerts, traffic information, road conditions, and other information for both transit and paratransit operators.
Local Dial-A-Ride Transit Dispatchers	Local Print and Broadcast Media	transit incident information	Planned	Information on transit incidents that impact transit services for public dissemination.
Local Dial-A-Ride Transit Dispatchers	Maricopa County EOC	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
Local Dial-A-Ride Transit Dispatchers	Maricopa County EOC	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Local Dial-A-Ride Transit Dispatchers	Maricopa County EOC	emergency transit schedule information	Planned	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Local Dial-A-Ride Transit Dispatchers	Maricopa County EOC	emergency transit service response	Planned	Response indicating changes to transit service, fares, and/or restrictions that will be made and status of transit resources to be deployed to support emergency response and/or evacuation.
Local Dial-A-Ride Transit Dispatchers	Maricopa County EOC	transit system status assessment	Planned	Assessment of damage sustained by the public transportation system including location and extent of the damage, current operational status including an estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Local Dial-A-Ride Transit Dispatchers	Mexico Customs and Border Patrol	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
Local Dial-A-Ride Transit Dispatchers	Mexico Customs and Border Patrol	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Local Dial-A-Ride Transit Dispatchers	Mexico Customs and Border Patrol	emergency transit schedule information	Planned	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
Local Dial-A-Ride Transit Dispatchers	Mexico Customs and Border Patrol	emergency transit service response	Planned	Response indicating changes to transit service, fares, and/or restrictions that will be made and status of transit resources to be deployed to support emergency response and/or evacuation.
Local Dial-A-Ride Transit Dispatchers	Mexico Customs and Border Patrol	transit system status assessment	Planned	Assessment of damage sustained by the public transportation system including location and extent of the damage, current operational status including an estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Local Dial-A-Ride Transit Dispatchers	Mexico Public Safety	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
Local Dial-A-Ride Transit Dispatchers	Mexico Public Safety	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Local Dial-A-Ride Transit Dispatchers	Mexico Public Safety	emergency transit schedule information	Planned	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
Local Dial-A-Ride Transit Dispatchers	Mexico Public Safety	emergency transit service response	Planned	Response indicating changes to transit service, fares, and/or restrictions that will be made and status of transit resources to be deployed to support emergency response and/or evacuation.
Local Dial-A-Ride Transit Dispatchers	Mexico Public Safety	transit system status assessment	Planned	Assessment of damage sustained by the public transportation system including location and extent of the damage, current operational status including an estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Local Dial-A-Ride Transit Dispatchers	NAIPTA (dba Mountain Line) Paratransit	transit fare coordination	Planned	Fare and pricing information shared between local/regional transit organizations.
Local Dial-A-Ride Transit Dispatchers	NAIPTA (dba Mountain Line) Paratransit	transit service coordination	Planned	Schedule coordination or AVL information shared between local/regional transit organizations. This includes coordination of connections and control parameters between transit properties as well as coordination of transit-related maintenance activities.
Local Dial-A-Ride Transit Dispatchers	NAIPTA (dba Mountain Line) Transit Management Center	transit fare coordination	Planned	Fare and pricing information shared between local/regional transit organizations.
Local Dial-A-Ride Transit Dispatchers	NAIPTA (dba Mountain Line) Transit Management Center	transit service coordination	Planned	Schedule coordination or AVL information shared between local/regional transit organizations. This includes coordination of connections and control parameters between transit properties as well as coordination of transit-related maintenance activities.
Local Dial-A-Ride Transit Dispatchers	NAIPTA (dba Mountain Line) Transit Management Center	transit traveler information coordination	Planned	Transit schedules, real-time arrival information, fare schedules, and general transit service information shared between transit organizations to support transit traveler information systems.
Local Dial-A-Ride Transit Dispatchers	NAIPTA (dba Mountain Line) Website and FLGRide	demand responsive transit plan	Planned	Plan regarding overall demand responsive transit schedules and deployment.
Local Dial-A-Ride Transit Dispatchers	NAIPTA (dba Mountain Line) Website and FLGRide	emergency transit schedule information	Existing	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
Local Dial-A-Ride Transit Dispatchers	NAIPTA (dba Mountain Line) Website and FLGRide	transit and fare schedules	Planned	Transit service information including routes, schedules, and fare information. This also includes on-demand service information.
Local Dial-A-Ride Transit Dispatchers	NAIPTA (dba Mountain Line) Website and FLGRide	transit fare information	Planned	Information provided by transit management that supports fare payment transactions.
Local Dial-A-Ride Transit Dispatchers	NAIPTA (dba Mountain Line) Website and FLGRide	transit schedule adherence information	Planned	Dynamic transit schedule adherence and transit vehicle location information.
Local Dial-A-Ride Transit Dispatchers	Payment Administration Center	account updates	Planned	Updates to an account, such as purchases, uses, cancellation, secureID changes or similar material changes to account information.
Local Dial-A-Ride Transit Dispatchers	Payment Administration Center	smart card reconciliation	Planned	Detailed list of charges of the form charge/transport provider, taken from a smart card that need to be applied to the listed providers.
Local Dial-A-Ride Transit Dispatchers	Personal Information Devices for Travelers	traveler payment request	Planned	Request for information supporting payments. For fee structures that include incentives, the request may support either an account debit or an account credit or reimbursement.
Local Dial-A-Ride Transit Dispatchers	Personal Information Devices for Travelers	user account reports	Planned	Reports on services offered/provided and associated charges.
Local Dial-A-Ride Transit Dispatchers	Private Transit Routing Service Provider	authorization response	Planned	Notification of status of authorization request.
Local Dial-A-Ride Transit Dispatchers	Private Transit Routing Service Provider	fare management information	Planned	Transit fare information and transaction data used to manage transit fare processing.
Local Dial-A-Ride Transit Dispatchers	Private Transit Routing Service Provider	personal transit information	Planned	General and personalized transit information for a particular fixed route, flexible route, or paratransit system.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Local Dial-A-Ride Transit Dispatchers	Private Transit Routing Service Provider	transit traveler information	Planned	Transit information prepared to support transit users and other travelers. It contains transit schedules, real-time arrival information, fare schedules, alerts and advisories, and general transit service information.
Local Dial-A-Ride Transit Dispatchers	Private Transit Routing Service Provider	traveler payment request	Planned	Request for information supporting payments. For fee structures that include incentives, the request may support either an account debit or an account credit or reimbursement.
Local Dial-A-Ride Transit Dispatchers	Private Transit Routing Service Provider	user account reports	Planned	Reports on services offered/provided and associated charges.
Local Dial-A-Ride Transit Dispatchers	Public Private Traveler Information	demand responsive transit plan	Planned	Plan regarding overall demand responsive transit schedules and deployment.
Local Dial-A-Ride Transit Dispatchers	Public Private Traveler Information	emergency transit schedule information	Existing	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
Local Dial-A-Ride Transit Dispatchers	Public Private Traveler Information	transit and fare schedules	Planned	Transit service information including routes, schedules, and fare information. This also includes on-demand service information.
Local Dial-A-Ride Transit Dispatchers	Public Private Traveler Information	transit fare information	Planned	Information provided by transit management that supports fare payment transactions.
Local Dial-A-Ride Transit Dispatchers	Public Private Traveler Information	transit probe data	Planned	Aggregate probe data derived from tracking transit vehicles. Data collected could include transit vehicle speeds and travel times for a given link or collection of links.
Local Dial-A-Ride Transit Dispatchers	Public Private Traveler Information	transit schedule adherence information	Planned	Dynamic transit schedule adherence and transit vehicle location information.
Local Dial-A-Ride Transit Dispatchers	Public Private Traveler Information	transit trip plan	Planned	An origin-destination transit trip that may involve multiple modes and connections.
Local Dial-A-Ride Transit Dispatchers	Transit Providers Dispatch (Public and Private)	transit fare coordination	Planned	Fare and pricing information shared between local/regional transit organizations.
Local Dial-A-Ride Transit Dispatchers	Transit Providers Dispatch (Public and Private)	transit service coordination	Planned	Schedule coordination or AVL information shared between local/regional transit organizations. This includes coordination of connections and control parameters between transit properties as well as coordination of transit-related maintenance activities.
Local Dial-A-Ride Transit Dispatchers	Transit Providers Dispatch (Public and Private)	transit traveler information coordination	Planned	Transit schedules, real-time arrival information, fare schedules, and general transit service information shared between transit organizations to support transit traveler information systems.
Local Dial-A-Ride Transit Dispatchers	Tribal Public Safety Dispatch	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
Local Dial-A-Ride Transit Dispatchers	Tribal Public Safety Dispatch	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Local Dial-A-Ride Transit Dispatchers	Tribal Public Safety Dispatch	emergency transit schedule information	Planned	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
Local Dial-A-Ride Transit Dispatchers	Tribal Public Safety Dispatch	emergency transit service response	Planned	Response indicating changes to transit service, fares, and/or restrictions that will be made and status of transit resources to be deployed to support emergency response and/or evacuation.
Local Dial-A-Ride Transit Dispatchers	Tribal Public Safety Dispatch	transit system status assessment	Planned	Assessment of damage sustained by the public transportation system including location and extent of the damage, current operational status including an estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Local Dial-A-Ride Transit Dispatchers	Tribal TMC-TOC-TIC	emergency transit schedule information	Planned	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
Local Dial-A-Ride Transit Dispatchers	Tribal Transit Centers	transit fare coordination	Planned	Fare and pricing information shared between local/regional transit organizations.
Local Dial-A-Ride Transit Dispatchers	Tribal Transit Centers	transit service coordination	Planned	Schedule coordination or AVL information shared between local/regional transit organizations. This includes coordination of connections and control parameters between transit properties as well as coordination of transit-related maintenance activities.
Local Dial-A-Ride Transit Dispatchers	US Border Patrol Dispatch	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
Local Dial-A-Ride Transit Dispatchers	US Border Patrol Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Local Dial-A-Ride Transit Dispatchers	US Border Patrol Dispatch	emergency transit schedule information	Existing	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
Local Dial-A-Ride Transit Dispatchers	US Border Patrol Dispatch	emergency transit service response	Existing	Response indicating changes to transit service, fares, and/or restrictions that will be made and status of transit resources to be deployed to support emergency response and/or evacuation.
Local Dial-A-Ride Transit Dispatchers	US Border Patrol Dispatch	transit system status assessment	Planned	Assessment of damage sustained by the public transportation system including location and extent of the damage, current operational status including an estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Local Dial-A-Ride Transit Dispatchers	Wide Area Alerting Systems	emergency transit schedule information	Planned	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
Local Dial-A-Ride Transit Dispatchers	YCAT Transit Passes	authorization response	Planned	Notification of status of authorization request.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Local Dial-A-Ride Transit Dispatchers	YCAT Transit Passes	fare management information	Planned	Transit fare information and transaction data used to manage transit fare processing.
Local Dial-A-Ride Transit Dispatchers	YCAT Website	demand responsive transit plan	Planned	Plan regarding overall demand responsive transit schedules and deployment.
Local Dial-A-Ride Transit Dispatchers	YCAT Website	emergency transit schedule information	Existing	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
Local Dial-A-Ride Transit Dispatchers	YCAT Website	transit and fare schedules	Planned	Transit service information including routes, schedules, and fare information. This also includes on-demand service information.
Local Dial-A-Ride Transit Dispatchers	YCAT Website	transit schedule adherence information	Planned	Dynamic transit schedule adherence and transit vehicle location information.
Local Dial-A-Ride Transit Dispatchers	Yuma County Area Transit (YCAT)	transit fare coordination	Planned	Fare and pricing information shared between local/regional transit organizations.
Local Dial-A-Ride Transit Dispatchers	Yuma County Area Transit (YCAT)	transit service coordination	Planned	Schedule coordination or AVL information shared between local/regional transit organizations. This includes coordination of connections and control parameters between transit properties as well as coordination of transit-related maintenance activities.
Local Dial-A-Ride Transit Dispatchers	Yuma County Area Transit (YCAT)	transit traveler information coordination	Planned	Transit schedules, real-time arrival information, fare schedules, and general transit service information shared between transit organizations to support transit traveler information systems.
Local Dial-A-Ride Transit Vehicles	Cities and Towns Transit Dispatch	authorization request	Planned	Request to determine if a transportation user is authorized to use a particular transportation resource.
Local Dial-A-Ride Transit Vehicles	Cities and Towns Transit Dispatch	fare collection data	Planned	Fare collection information including the summary of fare system data and financial payment transaction data.
Local Dial-A-Ride Transit Vehicles	Cities and Towns Transit Dispatch	transit vehicle schedule performance	Planned	Estimated times of arrival and anticipated schedule deviations reported by a transit vehicle.
Local Dial-A-Ride Transit Vehicles	Local Dial-A-Ride Transit Dispatchers	alarm notification	Existing	Notification of activation of an audible or silent alarm by a traveler in a public area or by a transit vehicle operator using an on-board device.
Local Dial-A-Ride Transit Vehicles	Local Dial-A-Ride Transit Dispatchers	authorization request	Planned	Request to determine if a transportation user is authorized to use a particular transportation resource.
Local Dial-A-Ride Transit Vehicles	Local Dial-A-Ride Transit Dispatchers	demand response passenger and use data	Existing	Data collected on board a demand response vehicle relating to the picking up and discharging of passengers.
Local Dial-A-Ride Transit Vehicles	Local Dial-A-Ride Transit Dispatchers	fare collection data	Existing	Fare collection information including the summary of fare system data and financial payment transaction data.
Local Dial-A-Ride Transit Vehicles	Local Dial-A-Ride Transit Dispatchers	transit vehicle conditions	Existing	Operating conditions of transit vehicle (e.g., engine running, oil pressure, fuel level and usage). It includes status of other on-board systems including user displays, passenger counters, and security systems. This overall status information is also collected from unused (out of service) vehicles.
Local Dial-A-Ride Transit Vehicles	Local Dial-A-Ride Transit Dispatchers	transit vehicle loading data	Existing	Data collected on board the transit vehicle relating to passenger boarding and alighting.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Local Dial-A-Ride Transit Vehicles	Local Dial-A-Ride Transit Dispatchers	transit vehicle location data	Existing	Current transit vehicle location and related operational conditions data provided by a transit vehicle.
Local Dial-A-Ride Transit Vehicles	Local Dial-A-Ride Transit Dispatchers	transit vehicle operator authentication information	Existing	Information regarding on-board transit operator authentication
Local Dial-A-Ride Transit Vehicles	Local Dial-A-Ride Transit Dispatchers	transit vehicle schedule performance	Existing	Estimated times of arrival and anticipated schedule deviations reported by a transit vehicle.
Local Dial-A-Ride Transit Vehicles	Payment Administration Center	authorization request	Planned	Request to determine if a transportation user is authorized to use a particular transportation resource.
Local Dial-A-Ride Transit Vehicles	Traveler Card-Smartcard	payment device update	Planned	Information updated concerning traveler's personal data including name, address, user account information, trip records, and profile data.
Local Dial-A-Ride Transit Vehicles	Traveler Card-Smartcard	request for payment	Planned	Request to deduct cost of service from user's payment account.
Local Dial-A-Ride Transit Vehicles	Travelers	traveler interface updates	Planned	Visual or audio information (e.g., routes, messages, guidance, emergency information) that is provided to the traveler.
Local Dial-A-Ride Transit Vehicles	YCAT Transit Passes	payment device update	Planned	Information updated concerning traveler's personal data including name, address, user account information, trip records, and profile data.
Local Dial-A-Ride Transit Vehicles	YCAT Transit Passes	request for payment	Planned	Request to deduct cost of service from user's payment account.
MAG Data User Systems	ADOT HPMS Data Archive	archived data product requests	Planned	A user-specified request for archived data products (i.e., data, meta data, or data catalogs). The request also includes information that is used to identify and authenticate the user and support electronic payment requirements, if any.
MAG Data User Systems	ADOT TOC Data Archive	archive analysis requests	Planned	A user request that initiates data mining, analytical processing, aggregation or summarization, report formulation, or other advanced processing and analysis of archived data. The request also includes information that is used to identify and authenticate the user and support electronic payment requirements, if any.
MAG Data User Systems	ADOT TOC Data Archive	archived data product requests	Planned	A user-specified request for archived data products (i.e., data, meta data, or data catalogs). The request also includes information that is used to identify and authenticate the user and support electronic payment requirements, if any.
MAG Data User Systems	AZTech RADS Data Archive	archive analysis requests	Planned	A user request that initiates data mining, analytical processing, aggregation or summarization, report formulation, or other advanced processing and analysis of archived data. The request also includes information that is used to identify and authenticate the user and support electronic payment requirements, if any.
MAG Data User Systems	AZTech RADS Data Archive	archived data product requests	Planned	A user-specified request for archived data products (i.e., data, meta data, or data catalogs). The request also includes information that is used to identify and authenticate the user and support electronic payment requirements, if any.
MAG Data User Systems	DPS Data Archive	archived data product requests	Planned	A user-specified request for archived data products (i.e., data, meta data, or data catalogs). The request also includes information that is used to identify and authenticate the user and support electronic payment requirements, if any.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
MAG Data User Systems	State Universities Data Archives	archived data product requests	Planned	A user-specified request for archived data products (i.e., data, meta data, or data catalogs). The request also includes information that is used to identify and authenticate the user and support electronic payment requirements, if any.
MAG Planning Traffic Database	ADOT AZ Crash Information System (ACIS)	archive analysis results	Planned	Processed information products, supporting meta data, and any associated transaction information resulting from data mining, analytical processing, aggregation or summarization, report formulation, or other on-line processing and analysis of archived data.
MAG Planning Traffic Database	ADOT AZ Crash Information System (ACIS)	archive request confirmation	Planned	Confirmation that an archive request has been received and processed with information on the disposition of the request.
MAG Planning Traffic Database	ADOT AZ Crash Information System (ACIS)	archived data products	Planned	Raw or processed data, meta data, data catalogs and other data products provided to a user system upon request. The response may also include any associated transaction information.
MAG Planning Traffic Database	ADOT Incident Response Unit (IRU)	archive status	Existing	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
MAG Planning Traffic Database	ADOT TOC Data User System	archive analysis results	Planned	Processed information products, supporting meta data, and any associated transaction information resulting from data mining, analytical processing, aggregation or summarization, report formulation, or other on-line processing and analysis of archived data.
MAG Planning Traffic Database	ADOT TOC Data User System	archive request confirmation	Planned	Confirmation that an archive request has been received and processed with information on the disposition of the request.
MAG Planning Traffic Database	ADOT TOC Data User System	archived data products	Planned	Raw or processed data, meta data, data catalogs and other data products provided to a user system upon request. The response may also include any associated transaction information.
MAG Planning Traffic Database	Archive Data Users	archived data products	Planned	Raw or processed data, meta data, data catalogs and other data products provided to a user system upon request. The response may also include any associated transaction information.
MAG Planning Traffic Database	AZTech RADS Data Archive	archive coordination	Planned	Catalog data, meta data, published data, and other information exchanged between archives to support data synchronization and satisfy user data requests.
MAG Planning Traffic Database	AZTech RADS Data Archive	archive status	Planned	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
MAG Planning Traffic Database	AZTech RADS Data Archive	other data source archive data	Planned	Data extracted from other data sources. A wide range of ITS and non-ITS data and associated meta data may be provided.
MAG Planning Traffic Database	AZTech RADS Data User System	archive analysis results	Planned	Processed information products, supporting meta data, and any associated transaction information resulting from data mining, analytical processing, aggregation or summarization, report formulation, or other on-line processing and analysis of archived data.
MAG Planning Traffic Database	AZTech RADS Data User System	archive request confirmation	Planned	Confirmation that an archive request has been received and processed with information on the disposition of the request.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
MAG Planning Traffic Database	AZTech RADS Data User System	archived data products	Planned	Raw or processed data, meta data, data catalogs and other data products provided to a user system upon request. The response may also include any associated transaction information.
MAG Planning Traffic Database	AZTech Regional Info System (ARIS)	archive status	Planned	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
Map Update System	ADOT CV Roadside Equipment	intersection geometry	Planned	The physical geometry of an intersection covering the location and width of each approaching lane, egress lane, and valid paths between approaches and egresses. This flow also defines the location of stop lines, cross walks, specific traffic law restrictions for the intersection (e.g., turning movement restrictions), and other elements that support calculation of a safe and legal vehicle path through the intersection.
Map Update System	ADOT CV Roadside Equipment	map updates	Planned	Map update that could include a new underlying static or real-time map or map layer(s) update. Map layers can include highways, major roads, streets, public transport routes, topography, points of interest, and regulatory information including turn restrictions and speed limits.
Map Update System	ADOT CV Roadside Equipment	parking facility geometry	Planned	Precise spatial description of a parking facility that locates each parking space and the ingress and egress routes that are used to travel to and from the spaces.
Map Update System	ADOT CV Roadside Equipment	roadway geometry	Planned	The physical geometry of a road segment that specifies the location and width of each lane, including normal lanes as well as special lanes for pedestrians and bicycles, transit vehicles, and trains. This flow also may include the curvature, grade, and superelevation or banking of the road segment.
Map Update System	ADOT DEOC-Dept EM Ops Center	intersection geometry	Planned	The physical geometry of an intersection covering the location and width of each approaching lane, egress lane, and valid paths between approaches and egresses. This flow also defines the location of stop lines, cross walks, specific traffic law restrictions for the intersection (e.g., turning movement restrictions), and other elements that support calculation of a safe and legal vehicle path through the intersection.
Map Update System	ADOT DEOC-Dept EM Ops Center	map updates	Planned	Map update that could include a new underlying static or real-time map or map layer(s) update. Map layers can include highways, major roads, streets, public transport routes, topography, points of interest, and regulatory information including turn restrictions and speed limits.
Map Update System	ADOT TOC and EMC	intersection geometry	Planned	The physical geometry of an intersection covering the location and width of each approaching lane, egress lane, and valid paths between approaches and egresses. This flow also defines the location of stop lines, cross walks, specific traffic law restrictions for the intersection (e.g., turning movement restrictions), and other elements that support calculation of a safe and legal vehicle path through the intersection.
Map Update System	ADOT TOC and EMC	map updates	Planned	Map update that could include a new underlying static or real-time map or map layer(s) update. Map layers can include highways, major roads, streets, public transport routes, topography, points of interest, and regulatory information including turn restrictions and speed limits.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Map Update System	ADOT Truck Parking Availability System (TPAS)	parking facility geometry	Planned	Precise spatial description of a parking facility that locates each parking space and the ingress and egress routes that are used to travel to and from the spaces.
Map Update System	DPS Central Communications Center	intersection geometry	Planned	The physical geometry of an intersection covering the location and width of each approaching lane, egress lane, and valid paths between approaches and egresses. This flow also defines the location of stop lines, cross walks, specific traffic law restrictions for the intersection (e.g., turning movement restrictions), and other elements that support calculation of a safe and legal vehicle path through the intersection.
Map Update System	DPS Central Communications Center	map updates	Planned	Map update that could include a new underlying static or real-time map or map layer(s) update. Map layers can include highways, major roads, streets, public transport routes, topography, points of interest, and regulatory information including turn restrictions and speed limits.
Map Update System	Private Transit Routing Service Provider	map updates	Planned	Map update that could include a new underlying static or real-time map or map layer(s) update. Map layers can include highways, major roads, streets, public transport routes, topography, points of interest, and regulatory information including turn restrictions and speed limits.
Map Update System	Private Transit Routing Service Provider	pathway map updates	Planned	Pathway map updates that could include a new underlying static or real-time map or map layer(s) update. Map layers can include pedestrian routes, bike lanes, curbs, elevators, escalators, doorways, curb cutouts, indoor facilities, and other relevant features that impact pathway use.
Maricopa County EOC	ADOT DEOC-Dept EM Ops Center	alert notification	Existing	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
Maricopa County EOC	ADOT DEOC-Dept EM Ops Center	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Maricopa County EOC	ADOT DEOC-Dept EM Ops Center	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Maricopa County EOC	ADOT DEOC-Dept EM Ops Center	emergency traffic control request	Existing	Special request to preempt the current traffic control strategy in effect at one or more signalized intersections or highway segments, activate traffic control and closure systems such as gates and barriers, activate safeguard systems, or use driver information systems. For example, this flow can request all signals to red-flash, request a progression of traffic control preemptions along an emergency vehicle route, request a specific evacuation traffic control plan, request activation of a road closure barrier system, or place a public safety or emergency-related message on a dynamic message sign.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Maricopa County EOC	ADOT DEOC-Dept EM Ops Center	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Maricopa County EOC	ADOT DEOC-Dept EM Ops Center	evacuation information	Existing	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
Maricopa County EOC	ADOT DEOC-Dept EM Ops Center	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Maricopa County EOC	ADOT DEOC-Dept EM Ops Center	incident information	Existing	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
Maricopa County EOC	ADOT DEOC-Dept EM Ops Center	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
Maricopa County EOC	ADOT DEOC-Dept EM Ops Center	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Maricopa County EOC	ADOT DEOC-Dept EM Ops Center	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
Maricopa County EOC	ADOT DEOC-Dept EM Ops Center	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Maricopa County EOC	ADOT DEOC-Dept EM Ops Center	resource request	Planned	A request for resources to implement special traffic control measures, assist in clean up, verify an incident, etc. The request may poll for resource availability or request pre-staging, staging, or immediate deployment of resources. Resources may be explicitly requested or a service may be requested and the specific resource deployment may be determined by the responding agency.
Maricopa County EOC	ADOT DEOC-Dept EM Ops Center	threat information	Existing	Threats regarding transportation infrastructure, facilities, or systems detected by a variety of methods (sensors, surveillance, threat analysis of advisories from outside agencies, etc.
Maricopa County EOC	ADOT DEOC-Dept EM Ops Center	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Maricopa County EOC	ADOT DEOC-Dept EM Ops Center	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Maricopa County EOC	ADOT ECD Dispatch	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Maricopa County EOC	ADOT ECD Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Maricopa County EOC	ADOT ECD Dispatch	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Maricopa County EOC	ADOT ECD Dispatch	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Maricopa County EOC	ADOT ECD Dispatch	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
Maricopa County EOC	ADOT ECD Dispatch	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Maricopa County EOC	ADOT ECD Dispatch	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Maricopa County EOC	ADOT ECD Dispatch	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
Maricopa County EOC	ADOT ECD Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Maricopa County EOC	ADOT ECD Operational Communications	alert notification coordination	Planned	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Maricopa County EOC	ADOT ECD Operational Communications	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Maricopa County EOC	ADOT ECD Operational Communications	evacuation coordination	Planned	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Maricopa County EOC	ADOT ECD Operational Communications	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
Maricopa County EOC	ADOT ECD Operational Communications	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
Maricopa County EOC	ADOT ECD Operational Communications	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Maricopa County EOC	ADOT ECD Operational Communications	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
Maricopa County EOC	ADOT ECD Operational Communications	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Maricopa County EOC	ADOT HazMat Response Team	alert notification	Existing	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
Maricopa County EOC	ADOT HazMat Response Team	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Maricopa County EOC	ADOT HazMat Response Team	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Maricopa County EOC	ADOT HazMat Response Team	emergency traffic control request	Existing	Special request to preempt the current traffic control strategy in effect at one or more signalized intersections or highway segments, activate traffic control and closure systems such as gates and barriers, activate safeguard systems, or use driver information systems. For example, this flow can request all signals to red-flash, request a progression of traffic control preemptions along an emergency vehicle route, request a specific evacuation traffic control plan, request activation of a road closure barrier system, or place a public safety or emergency-related message on a dynamic message sign.
Maricopa County EOC	ADOT HazMat Response Team	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Maricopa County EOC	ADOT HazMat Response Team	evacuation information	Existing	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
Maricopa County EOC	ADOT HazMat Response Team	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Maricopa County EOC	ADOT HazMat Response Team	incident information	Existing	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
Maricopa County EOC	ADOT HazMat Response Team	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
Maricopa County EOC	ADOT HazMat Response Team	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Maricopa County EOC	ADOT HazMat Response Team	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Maricopa County EOC	ADOT HazMat Response Team	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Maricopa County EOC	ADOT HazMat Response Team	resource request	Planned	A request for resources to implement special traffic control measures, assist in clean up, verify an incident, etc. The request may poll for resource availability or request pre-staging, staging, or immediate deployment of resources. Resources may be explicitly requested or a service may be requested and the specific resource deployment may be determined by the responding agency.
Maricopa County EOC	ADOT HazMat Response Team	threat information	Existing	Threats regarding transportation infrastructure, facilities, or systems detected by a variety of methods (sensors, surveillance, threat analysis of advisories from outside agencies, etc.
Maricopa County EOC	ADOT HazMat Response Team	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
Maricopa County EOC	ADOT HazMat Response Team	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Maricopa County EOC	ADOT Incident Response Unit (IRU)	incident information	Existing	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
Maricopa County EOC	ADOT TOC and EMC	alert notification	Existing	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
Maricopa County EOC	ADOT TOC and EMC	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Maricopa County EOC	ADOT TOC and EMC	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Maricopa County EOC	ADOT TOC and EMC	emergency traffic control request	Existing	Special request to preempt the current traffic control strategy in effect at one or more signalized intersections or highway segments, activate traffic control and closure systems such as gates and barriers, activate safeguard systems, or use driver information systems. For example, this flow can request all signals to red-flash, request a progression of traffic control preemptions along an emergency vehicle route, request a specific evacuation traffic control plan, request activation of a road closure barrier system, or place a public safety or emergency-related message on a dynamic message sign.
Maricopa County EOC	ADOT TOC and EMC	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Maricopa County EOC	ADOT TOC and EMC	evacuation information	Existing	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
Maricopa County EOC	ADOT TOC and EMC	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Maricopa County EOC	ADOT TOC and EMC	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
Maricopa County EOC	ADOT TOC and EMC	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
Maricopa County EOC	ADOT TOC and EMC	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Maricopa County EOC	ADOT TOC and EMC	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
Maricopa County EOC	ADOT TOC and EMC	remote surveillance control	Planned	The control commands used to remotely operate another center's sensors or surveillance equipment so that roadside surveillance assets can be shared by more than one agency.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Maricopa County EOC	ADOT TOC and EMC	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Maricopa County EOC	ADOT TOC and EMC	resource request	Planned	A request for resources to implement special traffic control measures, assist in clean up, verify an incident, etc. The request may poll for resource availability or request pre-staging, staging, or immediate deployment of resources. Resources may be explicitly requested or a service may be requested and the specific resource deployment may be determined by the responding agency.
Maricopa County EOC	ADOT TOC and EMC	threat information	Planned	Threats regarding transportation infrastructure, facilities, or systems detected by a variety of methods (sensors, surveillance, threat analysis of advisories from outside agencies, etc.
Maricopa County EOC	ADOT TOC and EMC	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
Maricopa County EOC	ADOT TOC and EMC	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Maricopa County EOC	AZTech RADS Data Archive	alert notification	Existing	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
Maricopa County EOC	AZTech RADS Data Archive	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Maricopa County EOC	AZTech RADS Data Archive	emergency traffic control request	Planned	Special request to preempt the current traffic control strategy in effect at one or more signalized intersections or highway segments, activate traffic control and closure systems such as gates and barriers, activate safeguard systems, or use driver information systems. For example, this flow can request all signals to red-flash, request a progression of traffic control preemptions along an emergency vehicle route, request a specific evacuation traffic control plan, request activation of a road closure barrier system, or place a public safety or emergency-related message on a dynamic message sign.
Maricopa County EOC	AZTech RADS Data Archive	evacuation information	Planned	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Maricopa County EOC	AZTech RADS Data Archive	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
Maricopa County EOC	AZTech RADS Data Archive	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
Maricopa County EOC	AZTech RADS Data Archive	resource request	Planned	A request for resources to implement special traffic control measures, assist in clean up, verify an incident, etc. The request may poll for resource availability or request pre-staging, staging, or immediate deployment of resources. Resources may be explicitly requested or a service may be requested and the specific resource deployment may be determined by the responding agency.
Maricopa County EOC	AZTech RADS Data Archive	threat information	Planned	Threats regarding transportation infrastructure, facilities, or systems detected by a variety of methods (sensors, surveillance, threat analysis of advisories from outside agencies, etc.
Maricopa County EOC	AZTech RADS Data Archive	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Maricopa County EOC	AZTech Regional Info System (ARIS)	alert notification	Planned	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
Maricopa County EOC	AZTech Regional Info System (ARIS)	evacuation information	Planned	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
Maricopa County EOC	AZTech Regional Info System (ARIS)	incident information for public	Planned	Report of current desensitized incident information prepared for public dissemination.
Maricopa County EOC	AZTech Regional Info System (ARIS)	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Maricopa County EOC	County 911 PSAPs	incident information for public	Existing	Report of current desensitized incident information prepared for public dissemination.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Maricopa County EOC	County 911 PSAPs	incident notification response	Planned	Interactive acknowledgement and verification of the incident information received, requests for additional information, and general information on incident response status.
Maricopa County EOC	County EMC-EOC	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Maricopa County EOC	County EMC-EOC	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Maricopa County EOC	County EMC-EOC	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Maricopa County EOC	County EMC-EOC	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Maricopa County EOC	County EMC-EOC	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
Maricopa County EOC	County EMC-EOC	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Maricopa County EOC	County EMC-EOC	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Maricopa County EOC	County EMC-EOC	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
Maricopa County EOC	County EMC-EOC	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Maricopa County EOC	DEMA Enforcement	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Maricopa County EOC	DEMA Enforcement	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Maricopa County EOC	DEMA Enforcement	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Maricopa County EOC	DEMA Enforcement	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Maricopa County EOC	DEMA Enforcement	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
Maricopa County EOC	DEMA Enforcement	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Maricopa County EOC	DEMA Enforcement	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Maricopa County EOC	DEMA Enforcement	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
Maricopa County EOC	DEMA Enforcement	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Maricopa County EOC	DEMA SEOC Arizona DEM Military Affairs	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Maricopa County EOC	DEMA SEOC Arizona DEM Military Affairs	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Maricopa County EOC	DEMA SEOC Arizona DEM Military Affairs	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Maricopa County EOC	DEMA SEOC Arizona DEM Military Affairs	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Maricopa County EOC	DEMA SEOC Arizona DEM Military Affairs	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
Maricopa County EOC	DEMA SEOC Arizona DEM Military Affairs	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Maricopa County EOC	DEMA SEOC Arizona DEM Military Affairs	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Maricopa County EOC	DEMA SEOC Arizona DEM Military Affairs	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
Maricopa County EOC	DEMA SEOC Arizona DEM Military Affairs	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Maricopa County EOC	DEMA WebEOC System	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Maricopa County EOC	DEMA WebEOC System	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Maricopa County EOC	DEMA WebEOC System	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Maricopa County EOC	DEMA WebEOC System	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Maricopa County EOC	DEMA WebEOC System	incident information for public	Existing	Report of current desensitized incident information prepared for public dissemination.
Maricopa County EOC	DEMA WebEOC System	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
Maricopa County EOC	DEMA WebEOC System	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Maricopa County EOC	DEMA WebEOC System	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Maricopa County EOC	DEMA WebEOC System	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
Maricopa County EOC	DEMA WebEOC System	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Maricopa County EOC	DPS Console Interface (Other LE)	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Maricopa County EOC	DPS Console Interface (Other LE)	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Maricopa County EOC	DPS Console Interface (Other LE)	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Maricopa County EOC	DPS Console Interface (Other LE)	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Maricopa County EOC	DPS Console Interface (Other LE)	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
Maricopa County EOC	DPS Console Interface (Other LE)	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Maricopa County EOC	DPS Console Interface (Other LE)	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Maricopa County EOC	DPS Console Interface (Other LE)	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
Maricopa County EOC	DPS Console Interface (Other LE)	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Maricopa County EOC	Fleet Management Systems	hazmat information request	Existing	Request for information about a particular hazmat load.
Maricopa County EOC	Independent School District Bus Dispatch	alert notification	Existing	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
Maricopa County EOC	Independent School District Bus Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Maricopa County EOC	Independent School District Bus Dispatch	emergency transit service request	Existing	Request to modify transit service and fare schedules to address emergencies, including requests for transit services to evacuate people from and/or deploy response agency personnel to an emergency scene. The request may poll for resource availability or request pre-staging, staging, or immediate dispatch of transit resources.
Maricopa County EOC	Independent School District Bus Dispatch	evacuation information	Existing	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Maricopa County EOC	Independent School District Bus Dispatch	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
Maricopa County EOC	Independent School District Bus Dispatch	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
Maricopa County EOC	Independent School District Bus Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Maricopa County EOC	Local Dial-A-Ride Transit Dispatchers	alert notification	Existing	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
Maricopa County EOC	Local Dial-A-Ride Transit Dispatchers	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Maricopa County EOC	Local Dial-A-Ride Transit Dispatchers	emergency transit service request	Planned	Request to modify transit service and fare schedules to address emergencies, including requests for transit services to evacuate people from and/or deploy response agency personnel to an emergency scene. The request may poll for resource availability or request pre-staging, staging, or immediate dispatch of transit resources.
Maricopa County EOC	Local Dial-A-Ride Transit Dispatchers	evacuation information	Existing	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
Maricopa County EOC	Local Dial-A-Ride Transit Dispatchers	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Maricopa County EOC	Local Dial-A-Ride Transit Dispatchers	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
Maricopa County EOC	Local Dial-A-Ride Transit Dispatchers	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Maricopa County EOC	Local Print and Broadcast Media	incident information for media	Existing	Report of current desensitized incident information prepared for public dissemination through the media.
Maricopa County EOC	Mexico Customs and Border Patrol	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Maricopa County EOC	Mexico Customs and Border Patrol	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Maricopa County EOC	Mexico Customs and Border Patrol	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Maricopa County EOC	Mexico Customs and Border Patrol	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Maricopa County EOC	Mexico Customs and Border Patrol	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
Maricopa County EOC	Mexico Customs and Border Patrol	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Maricopa County EOC	Mexico Customs and Border Patrol	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Maricopa County EOC	Mexico Customs and Border Patrol	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Maricopa County EOC	Mexico Customs and Border Patrol	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Maricopa County EOC	Mexico Public Safety	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Maricopa County EOC	Mexico Public Safety	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Maricopa County EOC	Mexico Public Safety	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Maricopa County EOC	Mexico Public Safety	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Maricopa County EOC	Mexico Public Safety	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
Maricopa County EOC	Mexico Public Safety	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Maricopa County EOC	Mexico Public Safety	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Maricopa County EOC	Mexico Public Safety	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
Maricopa County EOC	Mexico Public Safety	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Maricopa County EOC	Mexico Regional Maintenance Section	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Maricopa County EOC	Mexico Regional Maintenance Section	evacuation information	Planned	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
Maricopa County EOC	Mexico Regional Maintenance Section	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
Maricopa County EOC	Mexico Regional Maintenance Section	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
Maricopa County EOC	Mexico Regional Maintenance Section	maint and constr resource request	Planned	Request for road maintenance and construction resources that can be used in the diversion of traffic (cones, portable signs), clearance of a road hazard, repair of ancillary damage, or any other incident response. The request may poll for resource availability or request pre-staging, staging, or immediate dispatch of resources.
Maricopa County EOC	Mexico Regional Maintenance Section	threat information	Planned	Threats regarding transportation infrastructure, facilities, or systems detected by a variety of methods (sensors, surveillance, threat analysis of advisories from outside agencies, etc.
Maricopa County EOC	Mexico Regional Maintenance Section	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Maricopa County EOC	Mexico Regional TMC	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Maricopa County EOC	Mexico Regional TMC	emergency traffic control request	Existing	Special request to preempt the current traffic control strategy in effect at one or more signalized intersections or highway segments, activate traffic control and closure systems such as gates and barriers, activate safeguard systems, or use driver information systems. For example, this flow can request all signals to red-flash, request a progression of traffic control preemptions along an emergency vehicle route, request a specific evacuation traffic control plan, request activation of a road closure barrier system, or place a public safety or emergency-related message on a dynamic message sign.
Maricopa County EOC	Mexico Regional TMC	evacuation information	Existing	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
Maricopa County EOC	Mexico Regional TMC	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
Maricopa County EOC	Mexico Regional TMC	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
Maricopa County EOC	Mexico Regional TMC	resource request	Planned	A request for resources to implement special traffic control measures, assist in clean up, verify an incident, etc. The request may poll for resource availability or request pre-staging, staging, or immediate deployment of resources. Resources may be explicitly requested or a service may be requested and the specific resource deployment may be determined by the responding agency.
Maricopa County EOC	Mexico Regional TMC	threat information	Planned	Threats regarding transportation infrastructure, facilities, or systems detected by a variety of methods (sensors, surveillance, threat analysis of advisories from outside agencies, etc.
Maricopa County EOC	Mexico Regional TMC	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Maricopa County EOC	Public Private Traveler Information	alert notification	Planned	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
Maricopa County EOC	Public Private Traveler Information	evacuation information	Planned	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Maricopa County EOC	Public Private Traveler Information	incident information for public	Planned	Report of current desensitized incident information prepared for public dissemination.
Maricopa County EOC	Public Private Traveler Information	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Maricopa County EOC	Railroad Operations Center	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Maricopa County EOC	Social Media and Networking	alert notification for social media	Planned	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public via social media. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This version of the flow contains only publicly available information and is structured and formatted for publication on specific social media platforms and other public-facing sites.
Maricopa County EOC	Tribal Public Safety Dispatch	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Maricopa County EOC	Tribal Public Safety Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Maricopa County EOC	Tribal Public Safety Dispatch	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Maricopa County EOC	Tribal Public Safety Dispatch	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Maricopa County EOC	Tribal Public Safety Dispatch	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Maricopa County EOC	Tribal Public Safety Dispatch	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Maricopa County EOC	Tribal Public Safety Dispatch	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Maricopa County EOC	Tribal Public Safety Dispatch	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
Maricopa County EOC	Tribal Public Safety Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Maricopa County EOC	US Border Patrol Dispatch	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Maricopa County EOC	US Border Patrol Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Maricopa County EOC	US Border Patrol Dispatch	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Maricopa County EOC	US Border Patrol Dispatch	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Maricopa County EOC	US Border Patrol Dispatch	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Maricopa County EOC	US Border Patrol Dispatch	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Maricopa County EOC	US Border Patrol Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Maricopa County EOC	Utah State Police Dispatch	alert notification coordination	Planned	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Maricopa County EOC	Utah State Police Dispatch	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Maricopa County EOC	Utah State Police Dispatch	evacuation coordination	Planned	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Maricopa County EOC	Utah State Police Dispatch	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Maricopa County EOC	Utah State Police Dispatch	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
Maricopa County EOC	Utah State Police Dispatch	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Maricopa County EOC	Utah State Police Dispatch	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Maricopa County EOC	Utah State Police Dispatch	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Maricopa County EOC	Utah State Police Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Maricopa County EOC	Wide Area Alerting Systems	alert notification	Planned	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
Maricopa County EOC	Wide Area Alerting Systems	evacuation information	Planned	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
Maricopa County EOC	Wide Area Alerting Systems	incident information for public	Planned	Report of current desensitized incident information prepared for public dissemination.
Maricopa County EOC	Wide Area Alerting Systems	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
MCDOT Service Monitoring Sys for Connected Vehicles	ADOT ITS Field Equipment	time local form	Planned	Time local form includes UTC time synchronized with the external source in a format usable by connected vehicle center functions.
MCDOT Service Monitoring Sys for Connected Vehicles	ADOT Systems Maintenance	RSE fault data	Planned	RSE fault information that can be used to identify RSEs that require initialization, reconfiguration, repair or replacement. This flow identifies the device, the nature of the fault, and associated error codes and diagnostic data.
MCDOT Service Monitoring Sys for Connected Vehicles	AZTech RADS Data Archive	RSE fault data	Planned	RSE fault information that can be used to identify RSEs that require initialization, reconfiguration, repair or replacement. This flow identifies the device, the nature of the fault, and associated error codes and diagnostic data.
MCDOT Service Monitoring Sys for Connected Vehicles	AZTech RADS Data Archive	time local form	Planned	Time local form includes UTC time synchronized with the external source in a format usable by connected vehicle center functions.
Mexico Customs and Border Patrol	ADOT DEOC-Dept EM Ops Center	alert notification	Existing	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
Mexico Customs and Border Patrol	ADOT DEOC-Dept EM Ops Center	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Mexico Customs and Border Patrol	ADOT DEOC-Dept EM Ops Center	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Mexico Customs and Border Patrol	ADOT DEOC-Dept EM Ops Center	emergency traffic control request	Existing	Special request to preempt the current traffic control strategy in effect at one or more signalized intersections or highway segments, activate traffic control and closure systems such as gates and barriers, activate safeguard systems, or use driver information systems. For example, this flow can request all signals to red-flash, request a progression of traffic control preemptions along an emergency vehicle route, request a specific evacuation traffic control plan, request activation of a road closure barrier system, or place a public safety or emergency-related message on a dynamic message sign.
Mexico Customs and Border Patrol	ADOT DEOC-Dept EM Ops Center	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Mexico Customs and Border Patrol	ADOT DEOC-Dept EM Ops Center	evacuation information	Existing	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
Mexico Customs and Border Patrol	ADOT DEOC-Dept EM Ops Center	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Mexico Customs and Border Patrol	ADOT DEOC-Dept EM Ops Center	incident information	Existing	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
Mexico Customs and Border Patrol	ADOT DEOC-Dept EM Ops Center	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
Mexico Customs and Border Patrol	ADOT DEOC-Dept EM Ops Center	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Mexico Customs and Border Patrol	ADOT DEOC-Dept EM Ops Center	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Mexico Customs and Border Patrol	ADOT DEOC-Dept EM Ops Center	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Mexico Customs and Border Patrol	ADOT DEOC-Dept EM Ops Center	resource request	Planned	A request for resources to implement special traffic control measures, assist in clean up, verify an incident, etc. The request may poll for resource availability or request pre-staging, staging, or immediate deployment of resources. Resources may be explicitly requested or a service may be requested and the specific resource deployment may be determined by the responding agency.
Mexico Customs and Border Patrol	ADOT DEOC-Dept EM Ops Center	threat information	Existing	Threats regarding transportation infrastructure, facilities, or systems detected by a variety of methods (sensors, surveillance, threat analysis of advisories from outside agencies, etc.
Mexico Customs and Border Patrol	ADOT DEOC-Dept EM Ops Center	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
Mexico Customs and Border Patrol	ADOT DEOC-Dept EM Ops Center	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Mexico Customs and Border Patrol	ADOT ECD Dispatch	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Mexico Customs and Border Patrol	ADOT ECD Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Mexico Customs and Border Patrol	ADOT ECD Dispatch	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Mexico Customs and Border Patrol	ADOT ECD Dispatch	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Mexico Customs and Border Patrol	ADOT ECD Dispatch	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Mexico Customs and Border Patrol	ADOT ECD Dispatch	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Mexico Customs and Border Patrol	ADOT ECD Dispatch	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Mexico Customs and Border Patrol	ADOT ECD Dispatch	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
Mexico Customs and Border Patrol	ADOT ECD Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Mexico Customs and Border Patrol	ADOT ECD Operational Communications	alert notification coordination	Planned	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Mexico Customs and Border Patrol	ADOT ECD Operational Communications	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Mexico Customs and Border Patrol	ADOT ECD Operational Communications	evacuation coordination	Planned	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Mexico Customs and Border Patrol	ADOT ECD Operational Communications	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Mexico Customs and Border Patrol	ADOT ECD Operational Communications	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Mexico Customs and Border Patrol	ADOT ECD Operational Communications	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
Mexico Customs and Border Patrol	ADOT ECD Operational Communications	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Mexico Customs and Border Patrol	ADOT ECD Operational Communications	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
Mexico Customs and Border Patrol	ADOT ECD Operational Communications	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Mexico Customs and Border Patrol	DEMA Enforcement	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Mexico Customs and Border Patrol	DEMA Enforcement	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Mexico Customs and Border Patrol	DEMA Enforcement	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Mexico Customs and Border Patrol	DEMA Enforcement	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Mexico Customs and Border Patrol	DEMA Enforcement	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
Mexico Customs and Border Patrol	DEMA Enforcement	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Mexico Customs and Border Patrol	DEMA Enforcement	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Mexico Customs and Border Patrol	DEMA Enforcement	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Mexico Customs and Border Patrol	DEMA Enforcement	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Mexico Customs and Border Patrol	DEMA SEOC Arizona DEM Military Affairs	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Mexico Customs and Border Patrol	DEMA SEOC Arizona DEM Military Affairs	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Mexico Customs and Border Patrol	DEMA SEOC Arizona DEM Military Affairs	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Mexico Customs and Border Patrol	DEMA SEOC Arizona DEM Military Affairs	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Mexico Customs and Border Patrol	DEMA SEOC Arizona DEM Military Affairs	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
Mexico Customs and Border Patrol	DEMA SEOC Arizona DEM Military Affairs	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Mexico Customs and Border Patrol	DEMA SEOC Arizona DEM Military Affairs	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Mexico Customs and Border Patrol	DEMA SEOC Arizona DEM Military Affairs	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
Mexico Customs and Border Patrol	DEMA SEOC Arizona DEM Military Affairs	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Mexico Customs and Border Patrol	DEMA WebEOC System	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Mexico Customs and Border Patrol	DEMA WebEOC System	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Mexico Customs and Border Patrol	DEMA WebEOC System	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Mexico Customs and Border Patrol	DEMA WebEOC System	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Mexico Customs and Border Patrol	DEMA WebEOC System	incident information for public	Existing	Report of current desensitized incident information prepared for public dissemination.
Mexico Customs and Border Patrol	DEMA WebEOC System	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
Mexico Customs and Border Patrol	DEMA WebEOC System	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Mexico Customs and Border Patrol	DEMA WebEOC System	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Mexico Customs and Border Patrol	DEMA WebEOC System	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
Mexico Customs and Border Patrol	DEMA WebEOC System	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Mexico Customs and Border Patrol	DPS Console Interface (Other LE)	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Mexico Customs and Border Patrol	DPS Console Interface (Other LE)	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Mexico Customs and Border Patrol	DPS Console Interface (Other LE)	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Mexico Customs and Border Patrol	DPS Console Interface (Other LE)	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Mexico Customs and Border Patrol	DPS Console Interface (Other LE)	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
Mexico Customs and Border Patrol	DPS Console Interface (Other LE)	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Mexico Customs and Border Patrol	DPS Console Interface (Other LE)	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Mexico Customs and Border Patrol	DPS Console Interface (Other LE)	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
Mexico Customs and Border Patrol	DPS Console Interface (Other LE)	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Mexico Customs and Border Patrol	DPS Data Archive	emergency archive data	Existing	Logged emergency information including information that characterizes identified incidents (routine highway incidents through disasters), corresponding incident response information, evacuation information, surveillance data, threat data, and resource information. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Mexico Customs and Border Patrol	Independent School District Bus Dispatch	alert notification	Existing	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
Mexico Customs and Border Patrol	Independent School District Bus Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Mexico Customs and Border Patrol	Independent School District Bus Dispatch	emergency transit service request	Existing	Request to modify transit service and fare schedules to address emergencies, including requests for transit services to evacuate people from and/or deploy response agency personnel to an emergency scene. The request may poll for resource availability or request pre-staging, staging, or immediate dispatch of transit resources.
Mexico Customs and Border Patrol	Independent School District Bus Dispatch	evacuation information	Existing	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
Mexico Customs and Border Patrol	Independent School District Bus Dispatch	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
Mexico Customs and Border Patrol	Independent School District Bus Dispatch	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
Mexico Customs and Border Patrol	Independent School District Bus Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Mexico Customs and Border Patrol	Local Dial-A-Ride Transit Dispatchers	alert notification	Existing	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Mexico Customs and Border Patrol	Local Dial-A-Ride Transit Dispatchers	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Mexico Customs and Border Patrol	Local Dial-A-Ride Transit Dispatchers	emergency transit service request	Planned	Request to modify transit service and fare schedules to address emergencies, including requests for transit services to evacuate people from and/or deploy response agency personnel to an emergency scene. The request may poll for resource availability or request pre-staging, staging, or immediate dispatch of transit resources.
Mexico Customs and Border Patrol	Local Dial-A-Ride Transit Dispatchers	evacuation information	Existing	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
Mexico Customs and Border Patrol	Local Dial-A-Ride Transit Dispatchers	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
Mexico Customs and Border Patrol	Local Dial-A-Ride Transit Dispatchers	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
Mexico Customs and Border Patrol	Local Dial-A-Ride Transit Dispatchers	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Mexico Customs and Border Patrol	Maricopa County EOC	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Mexico Customs and Border Patrol	Maricopa County EOC	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Mexico Customs and Border Patrol	Maricopa County EOC	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Mexico Customs and Border Patrol	Maricopa County EOC	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Mexico Customs and Border Patrol	Maricopa County EOC	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
Mexico Customs and Border Patrol	Maricopa County EOC	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Mexico Customs and Border Patrol	Maricopa County EOC	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Mexico Customs and Border Patrol	Maricopa County EOC	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
Mexico Customs and Border Patrol	Maricopa County EOC	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Mexico Customs and Border Patrol	Mexico Public Safety	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Mexico Customs and Border Patrol	Mexico Public Safety	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Mexico Customs and Border Patrol	Mexico Public Safety	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Mexico Customs and Border Patrol	Mexico Public Safety	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Mexico Customs and Border Patrol	Mexico Public Safety	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Mexico Customs and Border Patrol	Mexico Public Safety	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Mexico Customs and Border Patrol	Mexico Public Safety	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Mexico Customs and Border Patrol	Mexico Public Safety	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
Mexico Customs and Border Patrol	Mexico Public Safety	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Mexico Customs and Border Patrol	Mexico Regional Maintenance Section	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Mexico Customs and Border Patrol	Mexico Regional Maintenance Section	evacuation information	Planned	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
Mexico Customs and Border Patrol	Mexico Regional Maintenance Section	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
Mexico Customs and Border Patrol	Mexico Regional Maintenance Section	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
Mexico Customs and Border Patrol	Mexico Regional Maintenance Section	maint and constr resource request	Planned	Request for road maintenance and construction resources that can be used in the diversion of traffic (cones, portable signs), clearance of a road hazard, repair of ancillary damage, or any other incident response. The request may poll for resource availability or request pre-staging, staging, or immediate dispatch of resources.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Mexico Customs and Border Patrol	Mexico Regional Maintenance Section	threat information	Planned	Threats regarding transportation infrastructure, facilities, or systems detected by a variety of methods (sensors, surveillance, threat analysis of advisories from outside agencies, etc.
Mexico Customs and Border Patrol	Mexico Regional Maintenance Section	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Mexico Customs and Border Patrol	Mexico Regional TMC	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Mexico Customs and Border Patrol	Mexico Regional TMC	emergency traffic control request	Existing	Special request to preempt the current traffic control strategy in effect at one or more signalized intersections or highway segments, activate traffic control and closure systems such as gates and barriers, activate safeguard systems, or use driver information systems. For example, this flow can request all signals to red-flash, request a progression of traffic control preemptions along an emergency vehicle route, request a specific evacuation traffic control plan, request activation of a road closure barrier system, or place a public safety or emergency-related message on a dynamic message sign.
Mexico Customs and Border Patrol	Mexico Regional TMC	evacuation information	Existing	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
Mexico Customs and Border Patrol	Mexico Regional TMC	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
Mexico Customs and Border Patrol	Mexico Regional TMC	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
Mexico Customs and Border Patrol	Mexico Regional TMC	resource request	Planned	A request for resources to implement special traffic control measures, assist in clean up, verify an incident, etc. The request may poll for resource availability or request pre-staging, staging, or immediate deployment of resources. Resources may be explicitly requested or a service may be requested and the specific resource deployment may be determined by the responding agency.
Mexico Customs and Border Patrol	Mexico Regional TMC	threat information	Planned	Threats regarding transportation infrastructure, facilities, or systems detected by a variety of methods (sensors, surveillance, threat analysis of advisories from outside agencies, etc.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Mexico Customs and Border Patrol	Mexico Regional TMC	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Mexico Customs and Border Patrol	POE Data Archive	emergency archive data	Planned	Logged emergency information including information that characterizes identified incidents (routine highway incidents through disasters), corresponding incident response information, evacuation information, surveillance data, threat data, and resource information. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
Mexico Customs and Border Patrol	POE Roadway Inspection Systems	alert notification	Planned	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
Mexico Customs and Border Patrol	POE Roadway Inspection Systems	evacuation information	Planned	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
Mexico Customs and Border Patrol	POE Roadway Inspection Systems	incident information for public	Planned	Report of current desensitized incident information prepared for public dissemination.
Mexico Customs and Border Patrol	POE Roadway Inspection Systems	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Mexico Customs and Border Patrol	Public Private Traveler Information	alert notification	Planned	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
Mexico Customs and Border Patrol	Public Private Traveler Information	evacuation information	Planned	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
Mexico Customs and Border Patrol	Public Private Traveler Information	incident information for public	Planned	Report of current desensitized incident information prepared for public dissemination.
Mexico Customs and Border Patrol	Public Private Traveler Information	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Mexico Customs and Border Patrol	Railroad Operations Center	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Mexico Customs and Border Patrol	Social Media and Networking	alert notification for social media	Planned	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public via social media. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This version of the flow contains only publicly available information and is structured and formatted for publication on specific social media platforms and other public-facing sites.
Mexico Customs and Border Patrol	US Border Patrol Dispatch	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Mexico Customs and Border Patrol	US Border Patrol Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Mexico Customs and Border Patrol	US Border Patrol Dispatch	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Mexico Customs and Border Patrol	US Border Patrol Dispatch	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Mexico Customs and Border Patrol	US Border Patrol Dispatch	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Mexico Customs and Border Patrol	US Border Patrol Dispatch	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Mexico Customs and Border Patrol	US Border Patrol Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Mexico Customs and Border Patrol	Wide Area Alerting Systems	alert notification	Planned	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
Mexico Customs and Border Patrol	Wide Area Alerting Systems	evacuation information	Planned	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
Mexico Customs and Border Patrol	Wide Area Alerting Systems	incident information for public	Planned	Report of current desensitized incident information prepared for public dissemination.
Mexico Customs and Border Patrol	Wide Area Alerting Systems	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Mexico Public Safety	ADOT DEOC-Dept EM Ops Center	alert notification	Existing	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
Mexico Public Safety	ADOT DEOC-Dept EM Ops Center	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Mexico Public Safety	ADOT DEOC-Dept EM Ops Center	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Mexico Public Safety	ADOT DEOC-Dept EM Ops Center	emergency traffic control request	Existing	Special request to preempt the current traffic control strategy in effect at one or more signalized intersections or highway segments, activate traffic control and closure systems such as gates and barriers, activate safeguard systems, or use driver information systems. For example, this flow can request all signals to red-flash, request a progression of traffic control preemptions along an emergency vehicle route, request a specific evacuation traffic control plan, request activation of a road closure barrier system, or place a public safety or emergency-related message on a dynamic message sign.
Mexico Public Safety	ADOT DEOC-Dept EM Ops Center	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Mexico Public Safety	ADOT DEOC-Dept EM Ops Center	evacuation information	Existing	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
Mexico Public Safety	ADOT DEOC-Dept EM Ops Center	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Mexico Public Safety	ADOT DEOC-Dept EM Ops Center	incident information	Existing	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
Mexico Public Safety	ADOT DEOC-Dept EM Ops Center	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
Mexico Public Safety	ADOT DEOC-Dept EM Ops Center	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Mexico Public Safety	ADOT DEOC-Dept EM Ops Center	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
Mexico Public Safety	ADOT DEOC-Dept EM Ops Center	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Mexico Public Safety	ADOT DEOC-Dept EM Ops Center	resource request	Planned	A request for resources to implement special traffic control measures, assist in clean up, verify an incident, etc. The request may poll for resource availability or request pre-staging, staging, or immediate deployment of resources. Resources may be explicitly requested or a service may be requested and the specific resource deployment may be determined by the responding agency.
Mexico Public Safety	ADOT DEOC-Dept EM Ops Center	threat information	Existing	Threats regarding transportation infrastructure, facilities, or systems detected by a variety of methods (sensors, surveillance, threat analysis of advisories from outside agencies, etc.
Mexico Public Safety	ADOT DEOC-Dept EM Ops Center	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
Mexico Public Safety	ADOT DEOC-Dept EM Ops Center	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Mexico Public Safety	ADOT ECD Dispatch	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Mexico Public Safety	ADOT ECD Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Mexico Public Safety	ADOT ECD Dispatch	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Mexico Public Safety	ADOT ECD Dispatch	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Mexico Public Safety	ADOT ECD Dispatch	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
Mexico Public Safety	ADOT ECD Dispatch	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Mexico Public Safety	ADOT ECD Dispatch	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Mexico Public Safety	ADOT ECD Dispatch	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
Mexico Public Safety	ADOT ECD Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Mexico Public Safety	ADOT ECD Operational Communications	alert notification coordination	Planned	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Mexico Public Safety	ADOT ECD Operational Communications	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Mexico Public Safety	ADOT ECD Operational Communications	evacuation coordination	Planned	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Mexico Public Safety	ADOT ECD Operational Communications	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Mexico Public Safety	ADOT ECD Operational Communications	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
Mexico Public Safety	ADOT ECD Operational Communications	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
Mexico Public Safety	ADOT ECD Operational Communications	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Mexico Public Safety	ADOT ECD Operational Communications	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Mexico Public Safety	ADOT ECD Operational Communications	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Mexico Public Safety	Cities and Towns Transit Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Mexico Public Safety	Cities and Towns Transit Dispatch	emergency transit service request	Existing	Request to modify transit service and fare schedules to address emergencies, including requests for transit services to evacuate people from and/or deploy response agency personnel to an emergency scene. The request may poll for resource availability or request pre-staging, staging, or immediate dispatch of transit resources.
Mexico Public Safety	Cities and Towns Transit Dispatch	evacuation information	Existing	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
Mexico Public Safety	Cities and Towns Transit Dispatch	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
Mexico Public Safety	Cities and Towns Transit Dispatch	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
Mexico Public Safety	Cities and Towns Transit Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Mexico Public Safety	DEMA Enforcement	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Mexico Public Safety	DEMA Enforcement	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Mexico Public Safety	DEMA Enforcement	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Mexico Public Safety	DEMA Enforcement	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Mexico Public Safety	DEMA Enforcement	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
Mexico Public Safety	DEMA Enforcement	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Mexico Public Safety	DEMA Enforcement	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Mexico Public Safety	DEMA Enforcement	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
Mexico Public Safety	DEMA Enforcement	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Mexico Public Safety	DEMA SEOC Arizona DEM Military Affairs	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Mexico Public Safety	DEMA SEOC Arizona DEM Military Affairs	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Mexico Public Safety	DEMA SEOC Arizona DEM Military Affairs	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Mexico Public Safety	DEMA SEOC Arizona DEM Military Affairs	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Mexico Public Safety	DEMA SEOC Arizona DEM Military Affairs	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
Mexico Public Safety	DEMA SEOC Arizona DEM Military Affairs	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Mexico Public Safety	DEMA SEOC Arizona DEM Military Affairs	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Mexico Public Safety	DEMA SEOC Arizona DEM Military Affairs	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
Mexico Public Safety	DEMA SEOC Arizona DEM Military Affairs	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Mexico Public Safety	DEMA WebEOC System	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Mexico Public Safety	DEMA WebEOC System	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Mexico Public Safety	DEMA WebEOC System	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Mexico Public Safety	DEMA WebEOC System	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Mexico Public Safety	DEMA WebEOC System	incident information for public	Existing	Report of current desensitized incident information prepared for public dissemination.
Mexico Public Safety	DEMA WebEOC System	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
Mexico Public Safety	DEMA WebEOC System	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Mexico Public Safety	DEMA WebEOC System	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Mexico Public Safety	DEMA WebEOC System	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
Mexico Public Safety	DEMA WebEOC System	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Mexico Public Safety	DPS Console Interface (Other LE)	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Mexico Public Safety	DPS Console Interface (Other LE)	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Mexico Public Safety	DPS Console Interface (Other LE)	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Mexico Public Safety	DPS Console Interface (Other LE)	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Mexico Public Safety	DPS Console Interface (Other LE)	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
Mexico Public Safety	DPS Console Interface (Other LE)	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Mexico Public Safety	DPS Console Interface (Other LE)	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Mexico Public Safety	DPS Console Interface (Other LE)	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
Mexico Public Safety	DPS Console Interface (Other LE)	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Mexico Public Safety	DPS Data Archive	emergency archive data	Existing	Logged emergency information including information that characterizes identified incidents (routine highway incidents through disasters), corresponding incident response information, evacuation information, surveillance data, threat data, and resource information. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
Mexico Public Safety	Independent School District Bus Dispatch	alert notification	Existing	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
Mexico Public Safety	Independent School District Bus Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Mexico Public Safety	Independent School District Bus Dispatch	emergency transit service request	Existing	Request to modify transit service and fare schedules to address emergencies, including requests for transit services to evacuate people from and/or deploy response agency personnel to an emergency scene. The request may poll for resource availability or request pre-staging, staging, or immediate dispatch of transit resources.
Mexico Public Safety	Independent School District Bus Dispatch	evacuation information	Existing	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Mexico Public Safety	Independent School District Bus Dispatch	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
Mexico Public Safety	Independent School District Bus Dispatch	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
Mexico Public Safety	Independent School District Bus Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Mexico Public Safety	Local Dial-A-Ride Transit Dispatchers	alert notification	Existing	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
Mexico Public Safety	Local Dial-A-Ride Transit Dispatchers	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Mexico Public Safety	Local Dial-A-Ride Transit Dispatchers	emergency transit service request	Planned	Request to modify transit service and fare schedules to address emergencies, including requests for transit services to evacuate people from and/or deploy response agency personnel to an emergency scene. The request may poll for resource availability or request pre-staging, staging, or immediate dispatch of transit resources.
Mexico Public Safety	Local Dial-A-Ride Transit Dispatchers	evacuation information	Existing	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
Mexico Public Safety	Local Dial-A-Ride Transit Dispatchers	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Mexico Public Safety	Local Dial-A-Ride Transit Dispatchers	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
Mexico Public Safety	Local Dial-A-Ride Transit Dispatchers	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Mexico Public Safety	Maricopa County EOC	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Mexico Public Safety	Maricopa County EOC	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Mexico Public Safety	Maricopa County EOC	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Mexico Public Safety	Maricopa County EOC	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Mexico Public Safety	Maricopa County EOC	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
Mexico Public Safety	Maricopa County EOC	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Mexico Public Safety	Maricopa County EOC	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Mexico Public Safety	Maricopa County EOC	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Mexico Public Safety	Maricopa County EOC	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Mexico Public Safety	Mexico Customs and Border Patrol	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Mexico Public Safety	Mexico Customs and Border Patrol	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Mexico Public Safety	Mexico Customs and Border Patrol	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Mexico Public Safety	Mexico Customs and Border Patrol	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Mexico Public Safety	Mexico Customs and Border Patrol	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
Mexico Public Safety	Mexico Customs and Border Patrol	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Mexico Public Safety	Mexico Customs and Border Patrol	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Mexico Public Safety	Mexico Customs and Border Patrol	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
Mexico Public Safety	Mexico Customs and Border Patrol	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Mexico Public Safety	Mexico Regional Maintenance Section	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Mexico Public Safety	Mexico Regional Maintenance Section	evacuation information	Planned	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
Mexico Public Safety	Mexico Regional Maintenance Section	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
Mexico Public Safety	Mexico Regional Maintenance Section	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
Mexico Public Safety	Mexico Regional Maintenance Section	maint and constr resource request	Planned	Request for road maintenance and construction resources that can be used in the diversion of traffic (cones, portable signs), clearance of a road hazard, repair of ancillary damage, or any other incident response. The request may poll for resource availability or request pre-staging, staging, or immediate dispatch of resources.
Mexico Public Safety	Mexico Regional Maintenance Section	threat information	Planned	Threats regarding transportation infrastructure, facilities, or systems detected by a variety of methods (sensors, surveillance, threat analysis of advisories from outside agencies, etc.
Mexico Public Safety	Mexico Regional Maintenance Section	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Mexico Public Safety	Mexico Regional TMC	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Mexico Public Safety	Mexico Regional TMC	emergency traffic control request	Existing	Special request to preempt the current traffic control strategy in effect at one or more signalized intersections or highway segments, activate traffic control and closure systems such as gates and barriers, activate safeguard systems, or use driver information systems. For example, this flow can request all signals to red-flash, request a progression of traffic control preemptions along an emergency vehicle route, request a specific evacuation traffic control plan, request activation of a road closure barrier system, or place a public safety or emergency-related message on a dynamic message sign.
Mexico Public Safety	Mexico Regional TMC	evacuation information	Existing	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
Mexico Public Safety	Mexico Regional TMC	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
Mexico Public Safety	Mexico Regional TMC	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
Mexico Public Safety	Mexico Regional TMC	resource request	Planned	A request for resources to implement special traffic control measures, assist in clean up, verify an incident, etc. The request may poll for resource availability or request pre-staging, staging, or immediate deployment of resources. Resources may be explicitly requested or a service may be requested and the specific resource deployment may be determined by the responding agency.
Mexico Public Safety	Mexico Regional TMC	threat information	Planned	Threats regarding transportation infrastructure, facilities, or systems detected by a variety of methods (sensors, surveillance, threat analysis of advisories from outside agencies, etc.
Mexico Public Safety	Mexico Regional TMC	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Mexico Public Safety	POE Data Archive	emergency archive data	Planned	Logged emergency information including information that characterizes identified incidents (routine highway incidents through disasters), corresponding incident response information, evacuation information, surveillance data, threat data, and resource information. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Mexico Public Safety	Public Private Traveler Information	alert notification	Planned	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
Mexico Public Safety	Public Private Traveler Information	evacuation information	Planned	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
Mexico Public Safety	Public Private Traveler Information	incident information for public	Planned	Report of current desensitized incident information prepared for public dissemination.
Mexico Public Safety	Public Private Traveler Information	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Mexico Public Safety	Railroad Operations Center	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Mexico Public Safety	Social Media and Networking	alert notification for social media	Planned	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public via social media. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This version of the flow contains only publicly available information and is structured and formatted for publication on specific social media platforms and other public-facing sites.
Mexico Public Safety	Transit Providers Dispatch (Public and Private)	alert notification	Existing	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
Mexico Public Safety	Transit Providers Dispatch (Public and Private)	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Mexico Public Safety	Transit Providers Dispatch (Public and Private)	emergency transit service request	Planned	Request to modify transit service and fare schedules to address emergencies, including requests for transit services to evacuate people from and/or deploy response agency personnel to an emergency scene. The request may poll for resource availability or request pre-staging, staging, or immediate dispatch of transit resources.
Mexico Public Safety	Transit Providers Dispatch (Public and Private)	evacuation information	Existing	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
Mexico Public Safety	Transit Providers Dispatch (Public and Private)	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
Mexico Public Safety	Transit Providers Dispatch (Public and Private)	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
Mexico Public Safety	Transit Providers Dispatch (Public and Private)	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Mexico Public Safety	US Border Patrol Dispatch	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Mexico Public Safety	US Border Patrol Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Mexico Public Safety	US Border Patrol Dispatch	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Mexico Public Safety	US Border Patrol Dispatch	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Mexico Public Safety	US Border Patrol Dispatch	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Mexico Public Safety	US Border Patrol Dispatch	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Mexico Public Safety	US Border Patrol Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Mexico Public Safety	Wide Area Alerting Systems	alert notification	Planned	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
Mexico Public Safety	Wide Area Alerting Systems	evacuation information	Planned	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
Mexico Public Safety	Wide Area Alerting Systems	incident information for public	Planned	Report of current desensitized incident information prepared for public dissemination.
Mexico Public Safety	Wide Area Alerting Systems	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Mexico Regional Maintenance Section	DEMA SEOC Arizona DEM Military Affairs	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Mexico Regional Maintenance Section	DEMA SEOC Arizona DEM Military Affairs	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
Mexico Regional Maintenance Section	DEMA SEOC Arizona DEM Military Affairs	maint and constr resource response	Planned	Current status of maintenance and construction resources including availability and deployment status. General resource inventory information covering vehicles, equipment, materials, and people and specific resource deployment status may be included.
Mexico Regional Maintenance Section	DEMA SEOC Arizona DEM Military Affairs	road network status assessment	Planned	Assessment of damage sustained by the road network including location and extent of the damage, estimate of remaining capacity, required closures, alternate routes, necessary restrictions, and time frame for repair and recovery.
Mexico Regional Maintenance Section	Maricopa County EOC	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Mexico Regional Maintenance Section	Maricopa County EOC	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
Mexico Regional Maintenance Section	Maricopa County EOC	maint and constr resource response	Planned	Current status of maintenance and construction resources including availability and deployment status. General resource inventory information covering vehicles, equipment, materials, and people and specific resource deployment status may be included.
Mexico Regional Maintenance Section	Maricopa County EOC	road network status assessment	Planned	Assessment of damage sustained by the road network including location and extent of the damage, estimate of remaining capacity, required closures, alternate routes, necessary restrictions, and time frame for repair and recovery.
Mexico Regional Maintenance Section	Mexico Customs and Border Patrol	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Mexico Regional Maintenance Section	Mexico Customs and Border Patrol	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
Mexico Regional Maintenance Section	Mexico Customs and Border Patrol	maint and constr resource response	Planned	Current status of maintenance and construction resources including availability and deployment status. General resource inventory information covering vehicles, equipment, materials, and people and specific resource deployment status may be included.
Mexico Regional Maintenance Section	Mexico Customs and Border Patrol	road network status assessment	Planned	Assessment of damage sustained by the road network including location and extent of the damage, estimate of remaining capacity, required closures, alternate routes, necessary restrictions, and time frame for repair and recovery.
Mexico Regional Maintenance Section	Mexico Public Safety	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Mexico Regional Maintenance Section	Mexico Public Safety	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Mexico Regional Maintenance Section	Mexico Public Safety	maint and constr resource response	Planned	Current status of maintenance and construction resources including availability and deployment status. General resource inventory information covering vehicles, equipment, materials, and people and specific resource deployment status may be included.
Mexico Regional Maintenance Section	Mexico Public Safety	road network status assessment	Planned	Assessment of damage sustained by the road network including location and extent of the damage, estimate of remaining capacity, required closures, alternate routes, necessary restrictions, and time frame for repair and recovery.
Mexico Regional Maintenance Section	Mexico Regional TMC	maint and constr resource response	Planned	Current status of maintenance and construction resources including availability and deployment status. General resource inventory information covering vehicles, equipment, materials, and people and specific resource deployment status may be included.
Mexico Regional Maintenance Section	Mexico Regional TMC	road network status assessment	Planned	Assessment of damage sustained by the road network including location and extent of the damage, estimate of remaining capacity, required closures, alternate routes, necessary restrictions, and time frame for repair and recovery.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Mexico Regional Maintenance Section	US Border Patrol Dispatch	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Mexico Regional Maintenance Section	US Border Patrol Dispatch	maint and constr resource response	Planned	Current status of maintenance and construction resources including availability and deployment status. General resource inventory information covering vehicles, equipment, materials, and people and specific resource deployment status may be included.
Mexico Regional Maintenance Section	US Border Patrol Dispatch	road network status assessment	Planned	Assessment of damage sustained by the road network including location and extent of the damage, estimate of remaining capacity, required closures, alternate routes, necessary restrictions, and time frame for repair and recovery.
Mexico Regional TMC	ADOT ECD Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Mexico Regional TMC	ADOT ECD Dispatch	emergency traffic control information	Existing	Status of a special traffic control strategy or system activation implemented in response to an emergency traffic control request, a request for emergency access routes, a request for evacuation, a request to activate closure systems, a request to employ driver information systems to support public safety objectives, or other special requests. Identifies the selected traffic control strategy and system control status.
Mexico Regional TMC	ADOT ECD Dispatch	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
Mexico Regional TMC	ADOT ECD Dispatch	resource deployment status	Planned	Status of resource deployment identifying the resources (vehicles, equipment, materials, and personnel) available and their current status. General resource inventory information and specific status of deployed resources may be included.
Mexico Regional TMC	ADOT ECD Dispatch	road network conditions	Planned	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.
Mexico Regional TMC	ADOT ECD Dispatch	road network status assessment	Planned	Assessment of damage sustained by the road network including location and extent of the damage, estimate of remaining capacity, required closures, alternate routes, necessary restrictions, and time frame for repair and recovery.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Mexico Regional TMC	ADOT ECD Operational Communications	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Mexico Regional TMC	ADOT ECD Operational Communications	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
Mexico Regional TMC	DEMA SEOC Arizona DEM Military Affairs	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Mexico Regional TMC	DEMA SEOC Arizona DEM Military Affairs	emergency traffic control information	Existing	Status of a special traffic control strategy or system activation implemented in response to an emergency traffic control request, a request for emergency access routes, a request for evacuation, a request to activate closure systems, a request to employ driver information systems to support public safety objectives, or other special requests. Identifies the selected traffic control strategy and system control status.
Mexico Regional TMC	DEMA SEOC Arizona DEM Military Affairs	incident information	Existing	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
Mexico Regional TMC	DEMA SEOC Arizona DEM Military Affairs	resource deployment status	Planned	Status of resource deployment identifying the resources (vehicles, equipment, materials, and personnel) available and their current status. General resource inventory information and specific status of deployed resources may be included.
Mexico Regional TMC	DEMA SEOC Arizona DEM Military Affairs	road network conditions	Existing	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.
Mexico Regional TMC	DEMA SEOC Arizona DEM Military Affairs	road network status assessment	Planned	Assessment of damage sustained by the road network including location and extent of the damage, estimate of remaining capacity, required closures, alternate routes, necessary restrictions, and time frame for repair and recovery.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Mexico Regional TMC	Maricopa County EOC	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Mexico Regional TMC	Maricopa County EOC	emergency traffic control information	Existing	Status of a special traffic control strategy or system activation implemented in response to an emergency traffic control request, a request for emergency access routes, a request for evacuation, a request to activate closure systems, a request to employ driver information systems to support public safety objectives, or other special requests. Identifies the selected traffic control strategy and system control status.
Mexico Regional TMC	Maricopa County EOC	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. Mexico Regional TMC	Maricopa County EOC	resource deployment status	Planned	Status of resource deployment identifying the resources (vehicles, equipment, materials, and personnel) available and their current status. General resource inventory information and specific status of deployed resources may be included.
Mexico Regional TMC	Maricopa County EOC	road network conditions	Planned	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.
Mexico Regional TMC	Maricopa County EOC	road network status assessment	Planned	Assessment of damage sustained by the road network including location and extent of the damage, estimate of remaining capacity, required closures, alternate routes, necessary restrictions, and time frame for repair and recovery.
Mexico Regional TMC	Mexico Customs and Border Patrol	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Mexico Regional TMC	Mexico Customs and Border Patrol	emergency traffic control information	Existing	Status of a special traffic control strategy or system activation implemented in response to an emergency traffic control request, a request for emergency access routes, a request for evacuation, a request to activate closure systems, a request to employ driver information systems to support public safety objectives, or other special requests. Identifies the selected traffic control strategy and system control status.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Mexico Regional TMC	Mexico Customs and Border Patrol	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
Mexico Regional TMC	Mexico Customs and Border Patrol	resource deployment status	Planned	Status of resource deployment identifying the resources (vehicles, equipment, materials, and personnel) available and their current status. General resource inventory information and specific status of deployed resources may be included.
Mexico Regional TMC	Mexico Customs and Border Patrol	road network conditions	Planned	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.
Mexico Regional TMC	Mexico Customs and Border Patrol	road network status assessment	Planned	Assessment of damage sustained by the road network including location and extent of the damage, estimate of remaining capacity, required closures, alternate routes, necessary restrictions, and time frame for repair and recovery.
Mexico Regional TMC	Mexico Public Safety	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Mexico Regional TMC	Mexico Public Safety	emergency traffic control information	Existing	Status of a special traffic control strategy or system activation implemented in response to an emergency traffic control request, a request for emergency access routes, a request for evacuation, a request to activate closure systems, a request to employ driver information systems to support public safety objectives, or other special requests. Identifies the selected traffic control strategy and system control status.
Mexico Regional TMC	Mexico Public Safety	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
Mexico Regional TMC	Mexico Public Safety	resource deployment status	Planned	Status of resource deployment identifying the resources (vehicles, equipment, materials, and personnel) available and their current status. General resource inventory information and specific status of deployed resources may be included.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Mexico Regional TMC	Mexico Public Safety	road network conditions	Planned	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.
Mexico Regional TMC	Mexico Public Safety	road network status assessment	Planned	Assessment of damage sustained by the road network including location and extent of the damage, estimate of remaining capacity, required closures, alternate routes, necessary restrictions, and time frame for repair and recovery.
Mexico Regional TMC	Mexico Regional Maintenance Section	maint and constr resource request	Planned	Request for road maintenance and construction resources that can be used in the diversion of traffic (cones, portable signs), clearance of a road hazard, repair of ancillary damage, or any other incident response. The request may poll for resource availability or request pre-staging, staging, or immediate dispatch of resources.
Mexico Regional TMC	Mexico Regional Maintenance Section	road network status assessment	Planned	Assessment of damage sustained by the road network including location and extent of the damage, estimate of remaining capacity, required closures, alternate routes, necessary restrictions, and time frame for repair and recovery.
Mexico Regional TMC	Public Private Traveler Information	incident information for public	Planned	Report of current desensitized incident information prepared for public dissemination.
Mexico Regional TMC	Public Private Traveler Information	road network conditions	Planned	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.
Mexico Regional TMC	Public Private Traveler Information	traffic images	Planned	High fidelity, real-time traffic images suitable for surveillance monitoring by the operator or for use in machine vision applications. This flow includes the images. Meta data that describes the images is contained in another flow.
Mohave County V2I Enabled Rural Highway Traffic Control Signs	Basic Private Vehicle	reduced speed notification	Planned	Reduced speed zone information provided to passing vehicles. This flow provides the reduced speed limit, the location and extent of the reduced speed zone, and associated warning information.
Mohave County V2I Enabled Rural Highway Traffic Control Signs	Basic Private Vehicle	traffic gap information	Planned	Measured gap to the next approaching vehicle per lane and direction of travel
Mohave County V2I Enabled Rural Highway Traffic Control Signs	Basic Private Vehicle	vehicle signage data	Planned	In-vehicle signing data that augments regulatory, warning, and informational road signs and signals. The information provided would include static sign information (e.g., stop, curve warning, guide signs, service signs, and directional signs) and dynamic information (e.g., local traffic and road conditions, restrictions, vehicle requirements, work zones, detours, closures, advisories, and warnings).
MPO-COG Data User Systems	ADOT HPMS Data Archive	archived data product requests	Planned	A user-specified request for archived data products (i.e., data, meta data, or data catalogs). The request also includes information that is used to identify and authenticate the user and support electronic payment requirements, if any.
MPO-COG Data User Systems	Cities and Towns Data Archive	archived data product requests	Planned	A user-specified request for archived data products (i.e., data, meta data, or data catalogs). The request also includes information that is used to identify and authenticate the user and support electronic payment requirements, if any.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
MPO-COG Data User Systems	County Data Archive	archived data product requests	Planned	A user-specified request for archived data products (i.e., data, meta data, or data catalogs). The request also includes information that is used to identify and authenticate the user and support electronic payment requirements, if any.
MPO-COG Data User Systems	MPO-COG Planning Traffic Database	archived data product requests	Planned	A user-specified request for archived data products (i.e., data, meta data, or data catalogs). The request also includes information that is used to identify and authenticate the user and support electronic payment requirements, if any.
MPO-COG Data User Systems	State Universities Data Archives	archived data product requests	Planned	A user-specified request for archived data products (i.e., data, meta data, or data catalogs). The request also includes information that is used to identify and authenticate the user and support electronic payment requirements, if any.
MPO-COG Planning Traffic Database	ADEQ Arizona Emissions Management	archive status	Planned	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
MPO-COG Planning Traffic Database	ADOT AZ Crash Information System (ACIS)	archive analysis results	Planned	Processed information products, supporting meta data, and any associated transaction information resulting from data mining, analytical processing, aggregation or summarization, report formulation, or other on-line processing and analysis of archived data.
MPO-COG Planning Traffic Database	ADOT AZ Crash Information System (ACIS)	archive request confirmation	Planned	Confirmation that an archive request has been received and processed with information on the disposition of the request.
MPO-COG Planning Traffic Database	ADOT AZ Crash Information System (ACIS)	archived data products	Planned	Raw or processed data, meta data, data catalogs and other data products provided to a user system upon request. The response may also include any associated transaction information.
MPO-COG Planning Traffic Database	ADOT HPMS Data Archive	archive coordination	Planned	Catalog data, meta data, published data, and other information exchanged between archives to support data synchronization and satisfy user data requests.
MPO-COG Planning Traffic Database	ADOT HPMS Data Archive	archive status	Planned	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
MPO-COG Planning Traffic Database	ADOT HPMS Data Archive	other data source archive data	Planned	Data extracted from other data sources. A wide range of ITS and non-ITS data and associated meta data may be provided.
MPO-COG Planning Traffic Database	ADOT HPMS Data User System	archived data products	Existing	Raw or processed data, meta data, data catalogs and other data products provided to a user system upon request. The response may also include any associated transaction information.
MPO-COG Planning Traffic Database	ADOT TOC Data User System	archive analysis results	Planned	Processed information products, supporting meta data, and any associated transaction information resulting from data mining, analytical processing, aggregation or summarization, report formulation, or other on-line processing and analysis of archived data.
MPO-COG Planning Traffic Database	ADOT TOC Data User System	archive request confirmation	Planned	Confirmation that an archive request has been received and processed with information on the disposition of the request.
MPO-COG Planning Traffic Database	ADOT TOC Data User System	archived data products	Planned	Raw or processed data, meta data, data catalogs and other data products provided to a user system upon request. The response may also include any associated transaction information.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
MPO-COG Planning Traffic Database	ADOT TOC Traffic Information Center	archive status	Planned	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
MPO-COG Planning Traffic Database	Archive Data Users	archived data products	Planned	Raw or processed data, meta data, data catalogs and other data products provided to a user system upon request. The response may also include any associated transaction information.
MPO-COG Planning Traffic Database	Cities and Towns Data Archive	archive coordination	Planned	Catalog data, meta data, published data, and other information exchanged between archives to support data synchronization and satisfy user data requests.
MPO-COG Planning Traffic Database	Cities and Towns Data Archive	other data source archive data	Existing	Data extracted from other data sources. A wide range of ITS and non-ITS data and associated meta data may be provided.
MPO-COG Planning Traffic Database	County Data User Systems	archived data products	Planned	Raw or processed data, meta data, data catalogs and other data products provided to a user system upon request. The response may also include any associated transaction information.
MPO-COG Planning Traffic Database	Local Dial-A-Ride Transit Dispatchers	archive status	Planned	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
MPO-COG Planning Traffic Database	MPO-COG Data User Systems	archived data products	Planned	Raw or processed data, meta data, data catalogs and other data products provided to a user system upon request. The response may also include any associated transaction information.
MPO-COG Planning Traffic Database	NAIPTA (dba Mountain Line) Paratransit	archive status	Planned	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
MPO-COG Planning Traffic Database	NAIPTA (dba Mountain Line) Transit Data Archive	archive coordination	Planned	Catalog data, meta data, published data, and other information exchanged between archives to support data synchronization and satisfy user data requests.
MPO-COG Planning Traffic Database	NAIPTA (dba Mountain Line) Transit Data Archive	other data source archive data	Planned	Data extracted from other data sources. A wide range of ITS and non-ITS data and associated meta data may be provided.
MPO-COG Planning Traffic Database	NAIPTA (dba Mountain Line) Website and FLGRide	archive status	Planned	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
MPO-COG Planning Traffic Database	PAG Data User Systems	archived data products	Planned	Raw or processed data, meta data, data catalogs and other data products provided to a user system upon request. The response may also include any associated transaction information.
MPO-COG Planning Traffic Database	Public Private Traveler Information	archive status	Planned	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
MPO-COG Planning Traffic Database	State Universities Data Archives	archive coordination	Planned	Catalog data, meta data, published data, and other information exchanged between archives to support data synchronization and satisfy user data requests.
MPO-COG Planning Traffic Database	State Universities Data Archives	archive status	Planned	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
MPO-COG Planning Traffic Database	State Universities Data Archives	other data source archive data	Planned	Data extracted from other data sources. A wide range of ITS and non-ITS data and associated meta data may be provided.
MPO-COG Planning Traffic Database	Transit Providers Dispatch (Public and Private)	archive status	Planned	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
MPO-COG Planning Traffic Database	Transit Providers Dispatch (Public and Private)	archived data products	Planned	Raw or processed data, meta data, data catalogs and other data products provided to a user system upon request. The response may also include any associated transaction information.
MPO-COG Planning Traffic Database	Tribal Data User Systems	archived data products	Planned	Raw or processed data, meta data, data catalogs and other data products provided to a user system upon request. The response may also include any associated transaction information.
MPO-COG Planning Traffic Database	YCAT Website	archive status	Planned	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
MPO-COG Planning Traffic Database	Yuma County Area Transit (YCAT)	archive status	Planned	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
MPO-COG Planning Traffic Database	Yuma County Area Transit (YCAT)	archived data products	Planned	Raw or processed data, meta data, data catalogs and other data products provided to a user system upon request. The response may also include any associated transaction information.
NAIPTA (dba Mountain Line) Bus Arrival System	Cities and Towns Transit Dispatch	transit traveler request	Planned	Request by a Transit traveler to summon assistance, request transit information, or request any other transit services.
NAIPTA (dba Mountain Line) Bus Arrival System	NAIPTA (dba Mountain Line) Transit Management Center	transit information user request	Planned	Request for special transit routing, real-time schedule information, and availability information.
NAIPTA (dba Mountain Line) Bus Arrival System	NAIPTA (dba Mountain Line) Transit Management Center	transit traveler request	Planned	Request by a Transit traveler to summon assistance, request transit information, or request any other transit services.
NAIPTA (dba Mountain Line) Bus Arrival System	Transit Providers Dispatch (Public and Private)	authorization request	Planned	Request to determine if a transportation user is authorized to use a particular transportation resource.
NAIPTA (dba Mountain Line) Bus Arrival System	Transit Providers Dispatch (Public and Private)	fare collection data	Planned	Fare collection information including the summary of fare system data and financial payment transaction data.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
NAIPTA (dba Mountain Line) Bus Arrival System	Travelers	traveler interface updates	Planned	Visual or audio information (e.g., routes, messages, guidance, emergency information) that is provided to the traveler.
NAIPTA (dba Mountain Line) ITS Field Equipment	NAIPTA (dba Mountain Line) Transit Data Archive	roadside archive data	Planned	A broad set of data derived from roadside sensors that includes current traffic conditions, environmental conditions, and any other data that can be directly collected by roadside sensors. This data also indicates the status of the sensors and reports of any identified sensor faults.
NAIPTA (dba Mountain Line) Paratransit	Cities and Towns EOC-EMC	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
NAIPTA (dba Mountain Line) Paratransit	Cities and Towns EOC-EMC	emergency transit schedule information	Existing	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
NAIPTA (dba Mountain Line) Paratransit	Cities and Towns EOC-EMC	emergency transit service response	Existing	Response indicating changes to transit service, fares, and/or restrictions that will be made and status of transit resources to be deployed to support emergency response and/or evacuation.
NAIPTA (dba Mountain Line) Paratransit	Cities and Towns EOC-EMC	transit system status assessment	Planned	Assessment of damage sustained by the public transportation system including location and extent of the damage, current operational status including an estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
NAIPTA (dba Mountain Line) Paratransit	Cities and Towns Police and Fire Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
NAIPTA (dba Mountain Line) Paratransit	Cities and Towns Police and Fire Dispatch	emergency transit schedule information	Existing	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
NAIPTA (dba Mountain Line) Paratransit	Cities and Towns Police and Fire Dispatch	emergency transit service response	Existing	Response indicating changes to transit service, fares, and/or restrictions that will be made and status of transit resources to be deployed to support emergency response and/or evacuation.
NAIPTA (dba Mountain Line) Paratransit	Cities and Towns Police and Fire Dispatch	transit system status assessment	Planned	Assessment of damage sustained by the public transportation system including location and extent of the damage, current operational status including an estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
NAIPTA (dba Mountain Line) Paratransit	Cities and Towns TIC and Website	emergency transit schedule information	Existing	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
NAIPTA (dba Mountain Line) Paratransit	Cities and Towns TIC and Website	transit and fare schedules	Planned	Transit service information including routes, schedules, and fare information. This also includes on-demand service information.
NAIPTA (dba Mountain Line) Paratransit	Cities and Towns Transit Dispatch	transit fare coordination	Planned	Fare and pricing information shared between local/regional transit organizations.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
NAIPTA (dba Mountain Line) Paratransit	Cities and Towns Transit Dispatch	transit service coordination	Existing	Schedule coordination or AVL information shared between local/regional transit organizations. This includes coordination of connections and control parameters between transit properties as well as coordination of transit-related maintenance activities.
NAIPTA (dba Mountain Line) Paratransit	County Transit Kiosks	transit traveler information	Planned	Transit information prepared to support transit users and other travelers. It contains transit schedules, real-time arrival information, fare schedules, alerts and advisories, and general transit service information.
NAIPTA (dba Mountain Line) Paratransit	County Website and NIXLE	emergency transit schedule information	Planned	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
NAIPTA (dba Mountain Line) Paratransit	County Website and NIXLE	transit service coordination	Planned	Schedule coordination or AVL information shared between local/regional transit organizations. This includes coordination of connections and control parameters between transit properties as well as coordination of transit-related maintenance activities.
NAIPTA (dba Mountain Line) Paratransit	DEMA SEOC Arizona DEM Military Affairs	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
NAIPTA (dba Mountain Line) Paratransit	DEMA SEOC Arizona DEM Military Affairs	emergency transit schedule information	Existing	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
NAIPTA (dba Mountain Line) Paratransit	DEMA SEOC Arizona DEM Military Affairs	emergency transit service response	Existing	Response indicating changes to transit service, fares, and/or restrictions that will be made and status of transit resources to be deployed to support emergency response and/or evacuation.
NAIPTA (dba Mountain Line) Paratransit	DEMA SEOC Arizona DEM Military Affairs	transit system status assessment	Planned	Assessment of damage sustained by the public transportation system including location and extent of the damage, current operational status including an estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
NAIPTA (dba Mountain Line) Paratransit	Financial Institution	payment request	Planned	Request for payment from financial institution or related financial service requests (e.g., balance inquiry)
NAIPTA (dba Mountain Line) Paratransit	Local Dial-A-Ride Transit Dispatchers	transit fare coordination	Planned	Fare and pricing information shared between local/regional transit organizations.
NAIPTA (dba Mountain Line) Paratransit	Local Dial-A-Ride Transit Dispatchers	transit service coordination	Planned	Schedule coordination or AVL information shared between local/regional transit organizations. This includes coordination of connections and control parameters between transit properties as well as coordination of transit-related maintenance activities.
NAIPTA (dba Mountain Line) Paratransit	MPO-COG Planning Traffic Database	transit archive data	Planned	Data used to describe and monitor transit demand, fares, operations, and system performance. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
NAIPTA (dba Mountain Line) Paratransit	NAIPTA (dba Mountain Line) Paratransit Vehicles	alarm acknowledge	Planned	Confirmation that alarm was received, instructions and additional information for the alarm initiator, and requests for additional information.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
NAIPTA (dba Mountain Line) Paratransit	NAIPTA (dba Mountain Line) Paratransit Vehicles	remote vehicle disable	Planned	Signal used to remotely disable a transit vehicle.
NAIPTA (dba Mountain Line) Paratransit	NAIPTA (dba Mountain Line) Paratransit Vehicles	transit schedule information	Existing	Current and projected transit schedule information used to initialize the transit vehicle with a vehicle assignment, monitor schedule performance, and develop corrective actions on-board.
NAIPTA (dba Mountain Line) Paratransit	NAIPTA (dba Mountain Line) Paratransit Vehicles	transit stop request	Planned	Notification that a transit stop has been requested by a transit user at a roadside stop. This flow identifies the route, stop, and the time of the request.
NAIPTA (dba Mountain Line) Paratransit	NAIPTA (dba Mountain Line) Paratransit Vehicles	transit vehicle operator authentication update	Planned	Results of authentication process or update of on-board authentication database.
NAIPTA (dba Mountain Line) Paratransit	NAIPTA (dba Mountain Line) Paratransit Vehicles	transit vehicle operator information	Planned	Transit service instructions, wide area alerts, traffic information, road conditions, and other information for both transit and paratransit operators.
NAIPTA (dba Mountain Line) Paratransit	NAIPTA (dba Mountain Line) Transit Buses	alarm acknowledge	Planned	Confirmation that alarm was received, instructions and additional information for the alarm initiator, and requests for additional information.
NAIPTA (dba Mountain Line) Paratransit	NAIPTA (dba Mountain Line) Transit Buses	remote vehicle disable	Planned	Signal used to remotely disable a transit vehicle.
NAIPTA (dba Mountain Line) Paratransit	NAIPTA (dba Mountain Line) Transit Buses	transit schedule information	Planned	Current and projected transit schedule information used to initialize the transit vehicle with a vehicle assignment, monitor schedule performance, and develop corrective actions on-board.
NAIPTA (dba Mountain Line) Paratransit	NAIPTA (dba Mountain Line) Transit Buses	transit stop request	Planned	Notification that a transit stop has been requested by a transit user at a roadside stop. This flow identifies the route, stop, and the time of the request.
NAIPTA (dba Mountain Line) Paratransit	NAIPTA (dba Mountain Line) Transit Buses	transit vehicle operator authentication update	Planned	Results of authentication process or update of on-board authentication database.
NAIPTA (dba Mountain Line) Paratransit	NAIPTA (dba Mountain Line) Transit Buses	transit vehicle operator information	Planned	Transit service instructions, wide area alerts, traffic information, road conditions, and other information for both transit and paratransit operators.
NAIPTA (dba Mountain Line) Paratransit	NAIPTA (dba Mountain Line) Transit Data Archive	transit archive data	Planned	Data used to describe and monitor transit demand, fares, operations, and system performance. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
NAIPTA (dba Mountain Line) Paratransit	NAIPTA (dba Mountain Line) Transit Management Center	transit fare coordination	Planned	Fare and pricing information shared between local/regional transit organizations.
NAIPTA (dba Mountain Line) Paratransit	NAIPTA (dba Mountain Line) Transit Management Center	transit service coordination	Planned	Schedule coordination or AVL information shared between local/regional transit organizations. This includes coordination of connections and control parameters between transit properties as well as coordination of transit-related maintenance activities.
NAIPTA (dba Mountain Line) Paratransit	NAIPTA (dba Mountain Line) Transit Management Center	transit traveler information coordination	Planned	Transit schedules, real-time arrival information, fare schedules, and general transit service information shared between transit organizations to support transit traveler information systems.
NAIPTA (dba Mountain Line) Paratransit	NAIPTA (dba Mountain Line) Website and FLGRide	demand responsive transit plan	Planned	Plan regarding overall demand responsive transit schedules and deployment.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
NAIPTA (dba Mountain Line) Paratransit	NAIPTA (dba Mountain Line) Website and FLGRide	emergency transit schedule information	Existing	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
NAIPTA (dba Mountain Line) Paratransit	NAIPTA (dba Mountain Line) Website and FLGRide	transit and fare schedules	Planned	Transit service information including routes, schedules, and fare information. This also includes on-demand service information.
NAIPTA (dba Mountain Line) Paratransit	NAIPTA (dba Mountain Line) Website and FLGRide	transit fare information	Planned	Information provided by transit management that supports fare payment transactions.
NAIPTA (dba Mountain Line) Paratransit	NAIPTA (dba Mountain Line) Website and FLGRide	transit incident information	Planned	Information on transit incidents that impact transit services for public dissemination.
NAIPTA (dba Mountain Line) Paratransit	NAIPTA (dba Mountain Line) Website and FLGRide	transit probe data	Planned	Aggregate probe data derived from tracking transit vehicles. Data collected could include transit vehicle speeds and travel times for a given link or collection of links.
NAIPTA (dba Mountain Line) Paratransit	NAIPTA (dba Mountain Line) Website and FLGRide	transit schedule adherence information	Planned	Dynamic transit schedule adherence and transit vehicle location information.
NAIPTA (dba Mountain Line) Paratransit	NAIPTA (dba Mountain Line) Website and FLGRide	transit trip plan	Planned	An origin-destination transit trip that may involve multiple modes and connections.
NAIPTA (dba Mountain Line) Paratransit	Payment Administration Center	account updates	Planned	Updates to an account, such as purchases, uses, cancellation, secureID changes or similar material changes to account information.
NAIPTA (dba Mountain Line) Paratransit	Payment Administration Center	smart card reconciliation	Planned	Detailed list of charges of the form charge/transport provider, taken from a smart card that need to be applied to the listed providers.
NAIPTA (dba Mountain Line) Paratransit	Personal Information Devices for Travelers	personal transit information	Planned	General and personalized transit information for a particular fixed route, flexible route, or paratransit system.
NAIPTA (dba Mountain Line) Paratransit	Private Transit Routing Service Provider	authorization response	Planned	Notification of status of authorization request.
NAIPTA (dba Mountain Line) Paratransit	Private Transit Routing Service Provider	fare management information	Planned	Transit fare information and transaction data used to manage transit fare processing.
NAIPTA (dba Mountain Line) Paratransit	Private Transit Routing Service Provider	personal transit information	Planned	General and personalized transit information for a particular fixed route, flexible route, or paratransit system.
NAIPTA (dba Mountain Line) Paratransit	Private Transit Routing Service Provider	transit traveler information	Planned	Transit information prepared to support transit users and other travelers. It contains transit schedules, real-time arrival information, fare schedules, alerts and advisories, and general transit service information.
NAIPTA (dba Mountain Line) Paratransit	Private Transit Routing Service Provider	traveler payment request	Planned	Request for information supporting payments. For fee structures that include incentives, the request may support either an account debit or an account credit or reimbursement.
NAIPTA (dba Mountain Line) Paratransit	Public Private Traveler Information	emergency transit schedule information	Existing	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
NAIPTA (dba Mountain Line) Paratransit	Public Private Traveler Information	transit and fare schedules	Planned	Transit service information including routes, schedules, and fare information. This also includes on-demand service information.
NAIPTA (dba Mountain Line) Paratransit	Public Private Traveler Information	transit fare information	Planned	Information provided by transit management that supports fare payment transactions.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
NAIPTA (dba Mountain Line) Paratransit	Public Private Traveler Information	transit probe data	Planned	Aggregate probe data derived from tracking transit vehicles. Data collected could include transit vehicle speeds and travel times for a given link or collection of links.
NAIPTA (dba Mountain Line) Paratransit	Public Private Traveler Information	transit schedule adherence information	Planned	Dynamic transit schedule adherence and transit vehicle location information.
NAIPTA (dba Mountain Line) Paratransit	Transit Providers Dispatch (Public and Private)	transit fare coordination	Planned	Fare and pricing information shared between local/regional transit organizations.
NAIPTA (dba Mountain Line) Paratransit	Transit Providers Dispatch (Public and Private)	transit service coordination	Planned	Schedule coordination or AVL information shared between local/regional transit organizations. This includes coordination of connections and control parameters between transit properties as well as coordination of transit-related maintenance activities.
NAIPTA (dba Mountain Line) Paratransit	Transit Providers Dispatch (Public and Private)	transit traveler information coordination	Planned	Transit schedules, real-time arrival information, fare schedules, and general transit service information shared between transit organizations to support transit traveler information systems.
NAIPTA (dba Mountain Line) Paratransit	Tribal Transit Centers	transit fare coordination	Planned	Fare and pricing information shared between local/regional transit organizations.
NAIPTA (dba Mountain Line) Paratransit	Tribal Transit Centers	transit service coordination	Planned	Schedule coordination or AVL information shared between local/regional transit organizations. This includes coordination of connections and control parameters between transit properties as well as coordination of transit-related maintenance activities.
NAIPTA (dba Mountain Line) Paratransit	Wide Area Alerting Systems	emergency transit schedule information	Planned	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
NAIPTA (dba Mountain Line) Paratransit Vehicles	NAIPTA (dba Mountain Line) ITS Field Equipment	local signal priority request	Planned	Request from a vehicle to a signalized intersection for priority at that intersection. This flow also allows the vehicle to cancel a priority request (for example, when the vehicle clears the intersection).
NAIPTA (dba Mountain Line) Paratransit Vehicles	NAIPTA (dba Mountain Line) Paratransit	alarm notification	Planned	Notification of activation of an audible or silent alarm by a traveler in a public area or by a transit vehicle operator using an on-board device.
NAIPTA (dba Mountain Line) Paratransit Vehicles	NAIPTA (dba Mountain Line) Paratransit	demand response passenger and use data	Planned	Data collected on board a demand response vehicle relating to the picking up and discharging of passengers.
NAIPTA (dba Mountain Line) Paratransit Vehicles	NAIPTA (dba Mountain Line) Paratransit	transit vehicle conditions	Existing	Operating conditions of transit vehicle (e.g., engine running, oil pressure, fuel level and usage). It includes status of other on-board systems including user displays, passenger counters, and security systems. This overall status information is also collected from unused (out of service) vehicles.
NAIPTA (dba Mountain Line) Paratransit Vehicles	NAIPTA (dba Mountain Line) Paratransit	transit vehicle loading data	Planned	Data collected on board the transit vehicle relating to passenger boarding and alighting.
NAIPTA (dba Mountain Line) Paratransit Vehicles	NAIPTA (dba Mountain Line) Paratransit	transit vehicle location data	Planned	Current transit vehicle location and related operational conditions data provided by a transit vehicle.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
NAIPTA (dba Mountain Line) Paratransit Vehicles	NAIPTA (dba Mountain Line) Paratransit	transit vehicle operator authentication information	Planned	Information regarding on-board transit operator authentication
NAIPTA (dba Mountain Line) Paratransit Vehicles	NAIPTA (dba Mountain Line) Paratransit	transit vehicle schedule performance	Planned	Estimated times of arrival and anticipated schedule deviations reported by a transit vehicle.
NAIPTA (dba Mountain Line) Paratransit Vehicles	NAIPTA (dba Mountain Line) Transit Management Center	alarm notification	Planned	Notification of activation of an audible or silent alarm by a traveler in a public area or by a transit vehicle operator using an on-board device.
NAIPTA (dba Mountain Line) Paratransit Vehicles	NAIPTA (dba Mountain Line) Transit Management Center	demand response passenger and use data	Planned	Data collected on board a demand response vehicle relating to the picking up and discharging of passengers.
NAIPTA (dba Mountain Line) Paratransit Vehicles	NAIPTA (dba Mountain Line) Transit Management Center	transit vehicle conditions	Planned	Operating conditions of transit vehicle (e.g., engine running, oil pressure, fuel level and usage). It includes status of other on-board systems including user displays, passenger counters, and security systems. This overall status information is also collected from unused (out of service) vehicles.
NAIPTA (dba Mountain Line) Paratransit Vehicles	NAIPTA (dba Mountain Line) Transit Management Center	transit vehicle loading data	Planned	Data collected on board the transit vehicle relating to passenger boarding and alighting.
NAIPTA (dba Mountain Line) Paratransit Vehicles	NAIPTA (dba Mountain Line) Transit Management Center	transit vehicle location data	Planned	Current transit vehicle location and related operational conditions data provided by a transit vehicle.
NAIPTA (dba Mountain Line) Paratransit Vehicles	NAIPTA (dba Mountain Line) Transit Management Center	transit vehicle operator authentication information	Planned	Information regarding on-board transit operator authentication
NAIPTA (dba Mountain Line) Paratransit Vehicles	NAIPTA (dba Mountain Line) Transit Management Center	transit vehicle schedule performance	Planned	Estimated times of arrival and anticipated schedule deviations reported by a transit vehicle.
NAIPTA (dba Mountain Line) Paratransit Vehicles	Payment Administration Center	authorization request	Planned	Request to determine if a transportation user is authorized to use a particular transportation resource.
NAIPTA (dba Mountain Line) Paratransit Vehicles	Traveler Card-Smartcard	payment device update	Planned	Information updated concerning traveler's personal data including name, address, user account information, trip records, and profile data.
NAIPTA (dba Mountain Line) Paratransit Vehicles	Traveler Card-Smartcard	request for payment	Planned	Request to deduct cost of service from user's payment account.
NAIPTA (dba Mountain Line) Paratransit Vehicles	Travelers	traveler interface updates	Planned	Visual or audio information (e.g., routes, messages, guidance, emergency information) that is provided to the traveler.
NAIPTA (dba Mountain Line) Transit Buses	NAIPTA (dba Mountain Line) ITS Field Equipment	local signal priority request	Planned	Request from a vehicle to a signalized intersection for priority at that intersection. This flow also allows the vehicle to cancel a priority request (for example, when the vehicle clears the intersection).
NAIPTA (dba Mountain Line) Transit Buses	NAIPTA (dba Mountain Line) Paratransit	alarm notification	Planned	Notification of activation of an audible or silent alarm by a traveler in a public area or by a transit vehicle operator using an on-board device.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
NAIPTA (dba Mountain Line) Transit Buses	NAIPTA (dba Mountain Line) Paratransit	demand response passenger and use data	Planned	Data collected on board a demand response vehicle relating to the picking up and discharging of passengers.
NAIPTA (dba Mountain Line) Transit Buses	NAIPTA (dba Mountain Line) Paratransit	transit vehicle conditions	Planned	Operating conditions of transit vehicle (e.g., engine running, oil pressure, fuel level and usage). It includes status of other on-board systems including user displays, passenger counters, and security systems. This overall status information is also collected from unused (out of service) vehicles.
NAIPTA (dba Mountain Line) Transit Buses	NAIPTA (dba Mountain Line) Paratransit	transit vehicle loading data	Planned	Data collected on board the transit vehicle relating to passenger boarding and alighting.
NAIPTA (dba Mountain Line) Transit Buses	NAIPTA (dba Mountain Line) Paratransit	transit vehicle location data	Planned	Current transit vehicle location and related operational conditions data provided by a transit vehicle.
NAIPTA (dba Mountain Line) Transit Buses	NAIPTA (dba Mountain Line) Paratransit	transit vehicle operator authentication information	Planned	Information regarding on-board transit operator authentication
NAIPTA (dba Mountain Line) Transit Buses	NAIPTA (dba Mountain Line) Paratransit	transit vehicle schedule performance	Planned	Estimated times of arrival and anticipated schedule deviations reported by a transit vehicle.
NAIPTA (dba Mountain Line) Transit Buses	NAIPTA (dba Mountain Line) Transit Management Center	alarm notification	Planned	Notification of activation of an audible or silent alarm by a traveler in a public area or by a transit vehicle operator using an on-board device.
NAIPTA (dba Mountain Line) Transit Buses	NAIPTA (dba Mountain Line) Transit Management Center	demand response passenger and use data	Planned	Data collected on board a demand response vehicle relating to the picking up and discharging of passengers.
NAIPTA (dba Mountain Line) Transit Buses	NAIPTA (dba Mountain Line) Transit Management Center	fare collection data	Planned	Fare collection information including the summary of fare system data and financial payment transaction data.
NAIPTA (dba Mountain Line) Transit Buses	NAIPTA (dba Mountain Line) Transit Management Center	transit traveler request	Planned	Request by a Transit traveler to summon assistance, request transit information, or request any other transit services.
NAIPTA (dba Mountain Line) Transit Buses	NAIPTA (dba Mountain Line) Transit Management Center	transit vehicle conditions	Planned	Operating conditions of transit vehicle (e.g., engine running, oil pressure, fuel level and usage). It includes status of other on-board systems including user displays, passenger counters, and security systems. This overall status information is also collected from unused (out of service) vehicles.
NAIPTA (dba Mountain Line) Transit Buses	NAIPTA (dba Mountain Line) Transit Management Center	transit vehicle loading data	Planned	Data collected on board the transit vehicle relating to passenger boarding and alighting.
NAIPTA (dba Mountain Line) Transit Buses	NAIPTA (dba Mountain Line) Transit Management Center	transit vehicle location data	Planned	Current transit vehicle location and related operational conditions data provided by a transit vehicle.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
NAIPTA (dba Mountain Line) Transit Buses	NAIPTA (dba Mountain Line) Transit Management Center	transit vehicle operator authentication information	Planned	Information regarding on-board transit operator authentication
NAIPTA (dba Mountain Line) Transit Buses	NAIPTA (dba Mountain Line) Transit Management Center	transit vehicle schedule performance	Planned	Estimated times of arrival and anticipated schedule deviations reported by a transit vehicle.
NAIPTA (dba Mountain Line) Transit Buses	Payment Administration Center	authorization request	Planned	Request to determine if a transportation user is authorized to use a particular transportation resource.
NAIPTA (dba Mountain Line) Transit Buses	Traveler Card-Smartcard	payment device update	Planned	Information updated concerning traveler's personal data including name, address, user account information, trip records, and profile data.
NAIPTA (dba Mountain Line) Transit Buses	Traveler Card-Smartcard	request for payment	Planned	Request to deduct cost of service from user's payment account.
NAIPTA (dba Mountain Line) Transit Buses	Travelers	traveler interface updates	Planned	Visual or audio information (e.g., routes, messages, guidance, emergency information) that is provided to the traveler.
NAIPTA (dba Mountain Line) Transit Data Archive	Archive Data Users	archived data products	Planned	Raw or processed data, meta data, data catalogs and other data products provided to a user system upon request. The response may also include any associated transaction information.
NAIPTA (dba Mountain Line) Transit Data Archive	Cities and Towns Transit Dispatch	archive status	Planned	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
NAIPTA (dba Mountain Line) Transit Data Archive	County Website and NIXLE	archive status	Planned	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
NAIPTA (dba Mountain Line) Transit Data Archive	MPO-COG Planning Traffic Database	archive coordination	Planned	Catalog data, meta data, published data, and other information exchanged between archives to support data synchronization and satisfy user data requests.
NAIPTA (dba Mountain Line) Transit Data Archive	MPO-COG Planning Traffic Database	archive status	Planned	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
NAIPTA (dba Mountain Line) Transit Data Archive	NAIPTA (dba Mountain Line) ITS Field Equipment	data collection and monitoring control	Planned	Information used to configure and control data collection and monitoring systems.
NAIPTA (dba Mountain Line) Transit Data Archive	NAIPTA (dba Mountain Line) Paratransit	archive status	Planned	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
NAIPTA (dba Mountain Line) Transit Data Archive	NAIPTA (dba Mountain Line) Transit Management Center	archive status	Planned	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
NAIPTA (dba Mountain Line) Transit Data Archive	NAIPTA (dba Mountain Line) Transit Management Center	archived data products	Planned	Raw or processed data, meta data, data catalogs and other data products provided to a user system upon request. The response may also include any associated transaction information.
NAIPTA (dba Mountain Line) Transit Data Archive	NAIPTA (dba Mountain Line) Website and FLGRide	archive status	Planned	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
NAIPTA (dba Mountain Line) Transit Data Archive	Public Private Traveler Information	archive status	Planned	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
NAIPTA (dba Mountain Line) Transit Management Center	Cities and Towns EOC-EMC	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
NAIPTA (dba Mountain Line) Transit Management Center	Cities and Towns EOC-EMC	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
NAIPTA (dba Mountain Line) Transit Management Center	Cities and Towns EOC-EMC	emergency transit schedule information	Existing	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
NAIPTA (dba Mountain Line) Transit Management Center	Cities and Towns EOC-EMC	emergency transit service response	Existing	Response indicating changes to transit service, fares, and/or restrictions that will be made and status of transit resources to be deployed to support emergency response and/or evacuation.
NAIPTA (dba Mountain Line) Transit Management Center	Cities and Towns EOC-EMC	transit system status assessment	Planned	Assessment of damage sustained by the public transportation system including location and extent of the damage, current operational status including an estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
NAIPTA (dba Mountain Line) Transit Management Center	Cities and Towns Police and Fire Dispatch	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
NAIPTA (dba Mountain Line) Transit Management Center	Cities and Towns Police and Fire Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
NAIPTA (dba Mountain Line) Transit Management Center	Cities and Towns Police and Fire Dispatch	emergency transit schedule information	Existing	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
NAIPTA (dba Mountain Line) Transit Management Center	Cities and Towns Police and Fire Dispatch	emergency transit service response	Existing	Response indicating changes to transit service, fares, and/or restrictions that will be made and status of transit resources to be deployed to support emergency response and/or evacuation.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
NAIPTA (dba Mountain Line) Transit Management Center	Cities and Towns Police and Fire Dispatch	transit system status assessment	Planned	Assessment of damage sustained by the public transportation system including location and extent of the damage, current operational status including an estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
NAIPTA (dba Mountain Line) Transit Management Center	Cities and Towns Transit Dispatch	transit fare coordination	Planned	Fare and pricing information shared between local/regional transit organizations.
NAIPTA (dba Mountain Line) Transit Management Center	Cities and Towns Transit Dispatch	transit service coordination	Planned	Schedule coordination or AVL information shared between local/regional transit organizations. This includes coordination of connections and control parameters between transit properties as well as coordination of transit-related maintenance activities.
NAIPTA (dba Mountain Line) Transit Management Center	Cities and Towns Transit Dispatch	transit traveler information coordination	Planned	Transit schedules, real-time arrival information, fare schedules, and general transit service information shared between transit organizations to support transit traveler information systems.
NAIPTA (dba Mountain Line) Transit Management Center	Financial Institution	payment request	Planned	Request for payment from financial institution or related financial service requests (e.g., balance inquiry)
NAIPTA (dba Mountain Line) Transit Management Center	Local Dial-A-Ride Transit Dispatchers	transit fare coordination	Planned	Fare and pricing information shared between local/regional transit organizations.
NAIPTA (dba Mountain Line) Transit Management Center	Local Dial-A-Ride Transit Dispatchers	transit service coordination	Planned	Schedule coordination or AVL information shared between local/regional transit organizations. This includes coordination of connections and control parameters between transit properties as well as coordination of transit-related maintenance activities.
NAIPTA (dba Mountain Line) Transit Management Center	Local Dial-A-Ride Transit Dispatchers	transit traveler information coordination	Planned	Transit schedules, real-time arrival information, fare schedules, and general transit service information shared between transit organizations to support transit traveler information systems.
NAIPTA (dba Mountain Line) Transit Management Center	NAIPTA (dba Mountain Line) Bus Arrival System	transit traveler information	Planned	Transit information prepared to support transit users and other travelers. It contains transit schedules, real-time arrival information, fare schedules, alerts and advisories, and general transit service information.
NAIPTA (dba Mountain Line) Transit Management Center	NAIPTA (dba Mountain Line) Paratransit	transit service coordination	Planned	Schedule coordination or AVL information shared between local/regional transit organizations. This includes coordination of connections and control parameters between transit properties as well as coordination of transit-related maintenance activities.
NAIPTA (dba Mountain Line) Transit Management Center	NAIPTA (dba Mountain Line) Paratransit Vehicles	alarm acknowledge	Planned	Confirmation that alarm was received, instructions and additional information for the alarm initiator, and requests for additional information.
NAIPTA (dba Mountain Line) Transit Management Center	NAIPTA (dba Mountain Line) Paratransit Vehicles	remote vehicle disable	Planned	Signal used to remotely disable a transit vehicle.
NAIPTA (dba Mountain Line) Transit Management Center	NAIPTA (dba Mountain Line) Paratransit Vehicles	transit schedule information	Planned	Current and projected transit schedule information used to initialize the transit vehicle with a vehicle assignment, monitor schedule performance, and develop corrective actions on-board.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
NAIPTA (dba Mountain Line) Transit Management Center	NAIPTA (dba Mountain Line) Paratransit Vehicles	transit stop request	Planned	Notification that a transit stop has been requested by a transit user at a roadside stop. This flow identifies the route, stop, and the time of the request.
NAIPTA (dba Mountain Line) Transit Management Center	NAIPTA (dba Mountain Line) Paratransit Vehicles	transit vehicle operator authentication update	Planned	Results of authentication process or update of on-board authentication database.
NAIPTA (dba Mountain Line) Transit Management Center	NAIPTA (dba Mountain Line) Paratransit Vehicles	transit vehicle operator information	Planned	Transit service instructions, wide area alerts, traffic information, road conditions, and other information for both transit and paratransit operators.
NAIPTA (dba Mountain Line) Transit Management Center	NAIPTA (dba Mountain Line) Transit Buses	alarm acknowledge	Planned	Confirmation that alarm was received, instructions and additional information for the alarm initiator, and requests for additional information.
NAIPTA (dba Mountain Line) Transit Management Center	NAIPTA (dba Mountain Line) Transit Buses	fare management information	Planned	Transit fare information and transaction data used to manage transit fare processing.
NAIPTA (dba Mountain Line) Transit Management Center	NAIPTA (dba Mountain Line) Transit Buses	remote vehicle disable	Planned	Signal used to remotely disable a transit vehicle.
NAIPTA (dba Mountain Line) Transit Management Center	NAIPTA (dba Mountain Line) Transit Buses	transit schedule information	Planned	Current and projected transit schedule information used to initialize the transit vehicle with a vehicle assignment, monitor schedule performance, and develop corrective actions on-board.
NAIPTA (dba Mountain Line) Transit Management Center	NAIPTA (dba Mountain Line) Transit Buses	transit traveler information	Planned	Transit information prepared to support transit users and other travelers. It contains transit schedules, real-time arrival information, fare schedules, alerts and advisories, and general transit service information.
NAIPTA (dba Mountain Line) Transit Management Center	NAIPTA (dba Mountain Line) Transit Buses	transit vehicle operator authentication update	Planned	Results of authentication process or update of on-board authentication database.
NAIPTA (dba Mountain Line) Transit Management Center	NAIPTA (dba Mountain Line) Transit Buses	transit vehicle operator information	Planned	Transit service instructions, wide area alerts, traffic information, road conditions, and other information for both transit and paratransit operators.
NAIPTA (dba Mountain Line) Transit Management Center	NAIPTA (dba Mountain Line) Transit Data Archive	archived data product requests	Planned	A user-specified request for archived data products (i.e., data, meta data, or data catalogs). The request also includes information that is used to identify and authenticate the user and support electronic payment requirements, if any.
NAIPTA (dba Mountain Line) Transit Management Center	NAIPTA (dba Mountain Line) Transit Data Archive	transit archive data	Planned	Data used to describe and monitor transit demand, fares, operations, and system performance. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
NAIPTA (dba Mountain Line) Transit Management Center	NAIPTA (dba Mountain Line) Website and FLGRide	demand responsive transit plan	Planned	Plan regarding overall demand responsive transit schedules and deployment.
NAIPTA (dba Mountain Line) Transit Management Center	NAIPTA (dba Mountain Line) Website and FLGRide	emergency transit schedule information	Existing	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
NAIPTA (dba Mountain Line) Transit Management Center	NAIPTA (dba Mountain Line) Website and FLGRide	transit and fare schedules	Planned	Transit service information including routes, schedules, and fare information. This also includes on-demand service information.
NAIPTA (dba Mountain Line) Transit Management Center	NAIPTA (dba Mountain Line) Website and FLGRide	transit fare information	Planned	Information provided by transit management that supports fare payment transactions.
NAIPTA (dba Mountain Line) Transit Management Center	NAIPTA (dba Mountain Line) Website and FLGRide	transit incident information	Planned	Information on transit incidents that impact transit services for public dissemination.
NAIPTA (dba Mountain Line) Transit Management Center	NAIPTA (dba Mountain Line) Website and FLGRide	transit probe data	Planned	Aggregate probe data derived from tracking transit vehicles. Data collected could include transit vehicle speeds and travel times for a given link or collection of links.
NAIPTA (dba Mountain Line) Transit Management Center	NAIPTA (dba Mountain Line) Website and FLGRide	transit schedule adherence information	Planned	Dynamic transit schedule adherence and transit vehicle location information.
NAIPTA (dba Mountain Line) Transit Management Center	Payment Administration Center	account updates	Planned	Updates to an account, such as purchases, uses, cancellation, secureID changes or similar material changes to account information.
NAIPTA (dba Mountain Line) Transit Management Center	Payment Administration Center	smart card reconciliation	Planned	Detailed list of charges of the form charge/transport provider, taken from a smart card that need to be applied to the listed providers.
NAIPTA (dba Mountain Line) Transit Management Center	Personal Information Devices for Travelers	personal transit information	Planned	General and personalized transit information for a particular fixed route, flexible route, or paratransit system.
NAIPTA (dba Mountain Line) Transit Management Center	Personal Information Devices for Travelers	traveler payment request	Planned	Request for information supporting payments. For fee structures that include incentives, the request may support either an account debit or an account credit or reimbursement.
NAIPTA (dba Mountain Line) Transit Management Center	Personal Information Devices for Travelers	trip plan	Planned	A travel itinerary covering single or multimodal travel. The itinerary identifies a route and associated traveler information and instructions identifying recommended trip modes (including indoor and outdoor wayfinding) and transfer information, ride sharing options, and transit and parking reservation information. This flow also includes intermediate information that is provided as the trip plan is interactively created, including identification of alternatives, requests for additional information as well as amenities along the trip.
NAIPTA (dba Mountain Line) Transit Management Center	Private Transit Routing Service Provider	authorization response	Planned	Notification of status of authorization request.
NAIPTA (dba Mountain Line) Transit Management Center	Private Transit Routing Service Provider	fare management information	Planned	Transit fare information and transaction data used to manage transit fare processing.
NAIPTA (dba Mountain Line) Transit Management Center	Private Transit Routing Service Provider	transit traveler information	Planned	Transit information prepared to support transit users and other travelers. It contains transit schedules, real-time arrival information, fare schedules, alerts and advisories, and general transit service information.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
NAIPTA (dba Mountain Line) Transit Management Center	Private Transit Routing Service Provider	traveler payment request	Planned	Request for information supporting payments. For fee structures that include incentives, the request may support either an account debit or an account credit or reimbursement.
NAIPTA (dba Mountain Line) Transit Management Center	Private Transit Routing Service Provider	trip plan	Planned	A travel itinerary covering single or multimodal travel. The itinerary identifies a route and associated traveler information and instructions identifying recommended trip modes (including indoor and outdoor wayfinding) and transfer information, ride sharing options, and transit and parking reservation information. This flow also includes intermediate information that is provided as the trip plan is interactively created, including identification of alternatives, requests for additional information as well as amenities along the trip.
NAIPTA (dba Mountain Line) Transit Management Center	Public Private Traveler Information	emergency transit schedule information	Existing	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
NAIPTA (dba Mountain Line) Transit Management Center	Public Private Traveler Information	transit and fare schedules	Planned	Transit service information including routes, schedules, and fare information. This also includes on-demand service information.
NAIPTA (dba Mountain Line) Transit Management Center	Public Private Traveler Information	transit fare information	Planned	Information provided by transit management that supports fare payment transactions.
NAIPTA (dba Mountain Line) Transit Management Center	Public Private Traveler Information	transit schedule adherence information	Planned	Dynamic transit schedule adherence and transit vehicle location information.
NAIPTA (dba Mountain Line) Transit Management Center	Transit Providers Dispatch (Public and Private)	transit fare coordination	Planned	Fare and pricing information shared between local/regional transit organizations.
NAIPTA (dba Mountain Line) Transit Management Center	Transit Providers Dispatch (Public and Private)	transit service coordination	Planned	Schedule coordination or AVL information shared between local/regional transit organizations. This includes coordination of connections and control parameters between transit properties as well as coordination of transit-related maintenance activities.
NAIPTA (dba Mountain Line) Transit Management Center	Transit Providers Dispatch (Public and Private)	transit traveler information coordination	Planned	Transit schedules, real-time arrival information, fare schedules, and general transit service information shared between transit organizations to support transit traveler information systems.
NAIPTA (dba Mountain Line) Transit Management Center	Tribal Transit Centers	transit fare coordination	Planned	Fare and pricing information shared between local/regional transit organizations.
NAIPTA (dba Mountain Line) Transit Management Center	Tribal Transit Centers	transit service coordination	Planned	Schedule coordination or AVL information shared between local/regional transit organizations. This includes coordination of connections and control parameters between transit properties as well as coordination of transit-related maintenance activities.
NAIPTA (dba Mountain Line) Transit Management Center	Wide Area Alerting Systems	emergency transit schedule information	Planned	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
NAIPTA (dba Mountain Line) Website and FLGRide	Cities and Towns Transit Dispatch	demand responsive transit request	Existing	Request for paratransit support.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
NAIPTA (dba Mountain Line) Website and FLGRide	Cities and Towns Transit Dispatch	transit fare request	Planned	Request for fare information and transit fare payment.
NAIPTA (dba Mountain Line) Website and FLGRide	Cities and Towns Transit Dispatch	transit trip request	Planned	Request for a transit trip plan that is responsive to traveler requirements such as schedule, cost, or duration.
NAIPTA (dba Mountain Line) Website and FLGRide	Cities and Towns Transit Dispatch	trip confirmation	Planned	Acknowledgement by the driver/traveler of acceptance of a trip plan with associated personal and payment information required to confirm reservations. Conversely, this flow may also reject the proposed trip plan. Confirmations include the selected route and subsequent trip confirmation messages will be issued for route changes.
NAIPTA (dba Mountain Line) Website and FLGRide	Local Dial-A-Ride Transit Dispatchers	demand responsive transit request	Planned	Request for paratransit support.
NAIPTA (dba Mountain Line) Website and FLGRide	Local Dial-A-Ride Transit Dispatchers	trip confirmation	Planned	Acknowledgement by the driver/traveler of acceptance of a trip plan with associated personal and payment information required to confirm reservations. Conversely, this flow may also reject the proposed trip plan. Confirmations include the selected route and subsequent trip confirmation messages will be issued for route changes.
NAIPTA (dba Mountain Line) Website and FLGRide	Local Print and Broadcast Media	traveler information for media	Planned	General traveler information regarding incidents, unusual traffic conditions, transit issues, or other advisory information that has been desensitized and provided to the media.
NAIPTA (dba Mountain Line) Website and FLGRide	MPO-COG Planning Traffic Database	traveler archive data	Planned	Data associated with traveler information services including service requests, facility usage, rideshare, routing, and traveler payment transaction data. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
NAIPTA (dba Mountain Line) Website and FLGRide	NAIPTA (dba Mountain Line) Paratransit	demand responsive transit request	Planned	Request for paratransit support.
NAIPTA (dba Mountain Line) Website and FLGRide	NAIPTA (dba Mountain Line) Paratransit	trip confirmation	Planned	Acknowledgement by the driver/traveler of acceptance of a trip plan with associated personal and payment information required to confirm reservations. Conversely, this flow may also reject the proposed trip plan. Confirmations include the selected route and subsequent trip confirmation messages will be issued for route changes.
NAIPTA (dba Mountain Line) Website and FLGRide	NAIPTA (dba Mountain Line) Transit Data Archive	traveler archive data	Planned	Data associated with traveler information services including service requests, facility usage, rideshare, routing, and traveler payment transaction data. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
NAIPTA (dba Mountain Line) Website and FLGRide	NAIPTA (dba Mountain Line) Transit Management Center	demand responsive transit request	Planned	Request for paratransit support.
NAIPTA (dba Mountain Line) Website and FLGRide	NAIPTA (dba Mountain Line) Transit Management Center	transit fare request	Planned	Request for fare information and transit fare payment.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
NAIPTA (dba Mountain Line) Website and FLGRide	NAIPTA (dba Mountain Line) Transit Management Center	trip confirmation	Planned	Acknowledgement by the driver/traveler of acceptance of a trip plan with associated personal and payment information required to confirm reservations. Conversely, this flow may also reject the proposed trip plan. Confirmations include the selected route and subsequent trip confirmation messages will be issued for route changes.
NAIPTA (dba Mountain Line) Website and FLGRide	Payment Administration Center	account updates	Planned	Updates to an account, such as purchases, uses, cancellation, secureID changes or similar material changes to account information.
NAIPTA (dba Mountain Line) Website and FLGRide	Payment Administration Center	smart card reconciliation	Planned	Detailed list of charges of the form charge/transport provider, taken from a smart card that need to be applied to the listed providers.
NAIPTA (dba Mountain Line) Website and FLGRide	Personal Information Devices for Travelers	broadcast traveler information	Planned	General traveler information that contains traffic and road conditions, link travel times, incidents, advisories, restrictions, vehicle requirements, work zones, transit service information, weather information, parking information, and other related traveler information.
NAIPTA (dba Mountain Line) Website and FLGRide	Personal Information Devices for Travelers	interactive traveler information	Planned	Traveler information provided in response to a traveler request. The provided information includes traffic and road conditions, advisories, incidents, restrictions, payment information, transit services, parking information, weather information, and other travel-related data updates and confirmations.
NAIPTA (dba Mountain Line) Website and FLGRide	Private Transit Routing Service Provider	broadcast traveler information	Planned	General traveler information that contains traffic and road conditions, link travel times, incidents, advisories, restrictions, vehicle requirements, work zones, transit service information, weather information, parking information, and other related traveler information.
NAIPTA (dba Mountain Line) Website and FLGRide	Private Transit Routing Service Provider	interactive traveler information	Planned	Traveler information provided in response to a traveler request. The provided information includes traffic and road conditions, advisories, incidents, restrictions, payment information, transit services, parking information, weather information, and other travel-related data updates and confirmations.
NAIPTA (dba Mountain Line) Website and FLGRide	Private Transit Routing Service Provider	trip plan	Planned	A travel itinerary covering single or multimodal travel. The itinerary identifies a route and associated traveler information and instructions identifying recommended trip modes (including indoor and outdoor wayfinding) and transfer information, ride sharing options, and transit and parking reservation information. This flow also includes intermediate information that is provided as the trip plan is interactively created, including identification of alternatives, requests for additional information as well as amenities along the trip.
NAIPTA (dba Mountain Line) Website and FLGRide	Public Private Traveler Information	emergency traveler information	Planned	Public notification of an emergency such as a natural or man-made disaster, civil emergency, or child abduction. This flow also includes evacuation information including evacuation instructions, evacuation zones, recommended evacuation times, tailored evacuation routes and destinations, traffic and road conditions along the evacuation routes, traveler services and shelter information, and reentry times and instructions.
NAIPTA (dba Mountain Line) Website and FLGRide	Public Private Traveler Information	transit service information	Planned	Transit service information including routes, schedules, and fare information as well as dynamic transit schedule adherence and transit vehicle location information.
NAIPTA (dba Mountain Line) Website and FLGRide	Transit Providers Dispatch (Public and Private)	transit fare request	Planned	Request for fare information and transit fare payment.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
NAIPTA (dba Mountain Line) Website and FLGRide	Transit Providers Dispatch (Public and Private)	trip confirmation	Planned	Acknowledgement by the driver/traveler of acceptance of a trip plan with associated personal and payment information required to confirm reservations. Conversely, this flow may also reject the proposed trip plan. Confirmations include the selected route and subsequent trip confirmation messages will be issued for route changes.
NAIPTA (dba Mountain Line) Website and FLGRide	Wide Area Alerting Systems	emergency traveler information	Planned	Public notification of an emergency such as a natural or man-made disaster, civil emergency, or child abduction. This flow also includes evacuation information including evacuation instructions, evacuation zones, recommended evacuation times, tailored evacuation routes and destinations, traffic and road conditions along the evacuation routes, traveler services and shelter information, and reentry times and instructions.
NDOT ITS Field Equipment	ADOT Roadside Comm Equipment	dynamic sign coordination	Existing	The direct flow of information between field equipment. This includes information used to initialize, configure, and control dynamic message signs. This flow can provide message content and delivery attributes, local message store maintenance requests, control mode commands, status queries, and all other commands and associated parameters that support local management of these devices. Current operating status of dynamic message signs is returned.
NDOT ITS Field Equipment	ADOT Roadside Comm Equipment	environmental sensor coordination	Existing	The direct flow of information between field equipment. This includes configuration and control of environmental sensors and the current road conditions (e.g., surface temperature, subsurface temperature, moisture, icing, treatment status) and surface weather conditions (e.g., air temperature, wind speed, precipitation, visibility) as measured and reported by fixed and/or mobile environmental sensors. Operational status of the sensors is also included.
NDOT ITS Field Equipment	ADOT Roadside Comm Equipment	lane management coordination	Existing	The direct flow of information between field equipment. This includes information used to configure and control dynamic lane management systems and the status of managed lanes including current operational state, violations, and logged information. This also includes lane usage information including both traditional traffic flow measures and special information associated with managed lanes such as measured passenger occupancies. It also includes the operational status of the lane management equipment.
NDOT ITS Field Equipment	ADOT Roadside Comm Equipment	local priority request coordination	Existing	The direct flow of information between field equipment. This includes notification of crossing calls from pedestrians and other vulnerable road users and requests for signal prioritization or preemption, and any other request for right-of-way at an intersection. The status of the priority request is also shared. For vulnerable road users, this includes information provided to guide and warn vulnerable road users at crossings including crossing permission status and crossing time remaining.
NDOT ITS Field Equipment	ADOT Roadside Comm Equipment	passive vehicle monitoring coordination	Planned	The direct flow of information between field equipment. This includes control commands used to control detection systems that rely on infrastructure-based identification of individual vehicles to measure travel times and other related measures by identifying the same vehicle at different points in the network. Related technologies include Bluetooth readers and license plate recognition systems. The coordination also includes sharing of time stamped identifiers that identify the vehicles that have passed through a detection zone.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
NDOT ITS Field Equipment	ADOT Roadside Comm Equipment	reversible lane coordination	Planned	The direct flow of information between field equipment. This includes control of automated reversible lane configuration and driver information systems and current reversible lane status including the operational status and mode of the reversible lane control equipment.
NDOT ITS Field Equipment	ADOT Roadside Comm Equipment	roadway treatment coordination	Existing	The direct flow of information between field equipment. This includes control data for remotely located, automated devices, that treat the road surface (e.g., de-icing applications) and the current operational status of automated roadway treatment devices.
NDOT ITS Field Equipment	ADOT Roadside Comm Equipment	roadway warning coordination	Existing	The direct flow of information between field equipment. This includes information used to configure and control roadway warning systems and the current operating status of roadway warning systems.
NDOT ITS Field Equipment	ADOT Roadside Comm Equipment	signal control coordination	Existing	The direct flow of information between field equipment. This includes configuration and control of traffic signal controllers or field masters. Configuration data and operational status of traffic signal control equipment including operating condition and current indications are returned.
NDOT ITS Field Equipment	ADOT Roadside Comm Equipment	traffic detector coordination	Existing	The direct flow of information between field equipment. This includes information used to configure and control traffic detector systems such as inductive loop detectors and machine vision sensors Raw and/or processed traffic detector data is returned that allows derivation of traffic flow variables (e.g., speed, volume, and density measures) and associated information (e.g., congestion, potential incidents). This flow includes the traffic data and the operational status of the traffic detectors
NDOT ITS Field Equipment	ADOT Roadside Comm Equipment	traffic metering coordination	Existing	The direct flow of information between field equipment. This includes control commands and operating parameters for ramp meters, interchange meters, mainline meters, and other systems equipment associated with roadway metering operations. Current operational status of the traffic metering status is also provided.
NDOT ITS Field Equipment	ADOT Roadside Comm Equipment	variable speed limit coordination	Existing	The direct flow of information between field equipment. This includes information used to configure, control, and monitor variable speed limit systems including the equipment used to provide current speed limits and other information to drivers.
NDOT ITS Field Equipment	ADOT Roadside Comm Equipment	video surveillance coordination	Existing	The direct flow of information between field equipment. This includes information used to configure and control video surveillance systems and the high fidelity, real-time traffic images and associated meta data that are returned.
NDOT ITS Field Equipment	ADOT RWIS	dynamic sign coordination	Existing	The direct flow of information between field equipment. This includes information used to initialize, configure, and control dynamic message signs. This flow can provide message content and delivery attributes, local message store maintenance requests, control mode commands, status queries, and all other commands and associated parameters that support local management of these devices. Current operating status of dynamic message signs is returned.
NDOT ITS Field Equipment	ADOT RWIS	roadway treatment coordination	Existing	The direct flow of information between field equipment. This includes control data for remotely located, automated devices, that treat the road surface (e.g., de-icing applications) and the current operational status of automated roadway treatment devices.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
NDOT ITS Field Equipment	ADOT RWIS	roadway warning coordination	Existing	The direct flow of information between field equipment. This includes information used to configure and control roadway warning systems and the current operating status of roadway warning systems.
NDOT ITS Field Equipment	ADOT RWIS	variable speed limit coordination	Planned	The direct flow of information between field equipment. This includes information used to configure, control, and monitor variable speed limit systems including the equipment used to provide current speed limits and other information to drivers.
NDOT ITS Field Equipment	ADOT RWIS	video surveillance coordination	Existing	The direct flow of information between field equipment. This includes information used to configure and control video surveillance systems and the high fidelity, real-time traffic images and associated meta data that are returned.
NDOT TOC - FAST TMC	ADOT DEOC-Dept EM Ops Center	device control request	Planned	Request for device control action
NDOT TOC - FAST TMC	ADOT DEOC-Dept EM Ops Center	device data	Planned	Data from detectors, environmental sensor stations, roadside equipment, and traffic control devices, including device inventory information.
NDOT TOC - FAST TMC	ADOT DEOC-Dept EM Ops Center	device status	Planned	Status information from devices
NDOT TOC - FAST TMC	ADOT DEOC-Dept EM Ops Center	emergency traffic coordination	Existing	Coordination supporting disaster response including evacuation and reentry. Includes coordination of special traffic control strategies that support efficient evacuation and reentry while protecting and optimizing movement of response vehicles and other resources responding to the emergency.
NDOT TOC - FAST TMC	ADOT DEOC-Dept EM Ops Center	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
NDOT TOC - FAST TMC	ADOT DEOC-Dept EM Ops Center	road network conditions	Planned	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.
NDOT TOC - FAST TMC	ADOT DEOC-Dept EM Ops Center	traffic images	Planned	High fidelity, real-time traffic images suitable for surveillance monitoring by the operator or for use in machine vision applications. This flow includes the images. Meta data that describes the images is contained in another flow.
NDOT TOC - FAST TMC	ADOT TOC and EMC	device control request	Planned	Request for device control action
NDOT TOC - FAST TMC	ADOT TOC and EMC	device data	Planned	Data from detectors, environmental sensor stations, roadside equipment, and traffic control devices, including device inventory information.
NDOT TOC - FAST TMC	ADOT TOC and EMC	device status	Planned	Status information from devices

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
NDOT TOC - FAST TMC	ADOT TOC and EMC	emergency traffic coordination	Planned	Coordination supporting disaster response including evacuation and reentry. Includes coordination of special traffic control strategies that support efficient evacuation and reentry while protecting and optimizing movement of response vehicles and other resources responding to the emergency.
NDOT TOC - FAST TMC	ADOT TOC and EMC	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
NDOT TOC - FAST TMC	ADOT TOC and EMC	road network conditions	Planned	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.
NDOT TOC - FAST TMC	ADOT TOC and EMC	traffic images	Planned	High fidelity, real-time traffic images suitable for surveillance monitoring by the operator or for use in machine vision applications. This flow includes the images. Meta data that describes the images is contained in another flow.
Nevada State Police Dispatch	ADOT DEOC-Dept EM Ops Center	alert notification	Existing	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
Nevada State Police Dispatch	ADOT DEOC-Dept EM Ops Center	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Nevada State Police Dispatch	ADOT DEOC-Dept EM Ops Center	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Nevada State Police Dispatch	ADOT DEOC-Dept EM Ops Center	emergency traffic control request	Existing	Special request to preempt the current traffic control strategy in effect at one or more signalized intersections or highway segments, activate traffic control and closure systems such as gates and barriers, activate safeguard systems, or use driver information systems. For example, this flow can request all signals to red-flash, request a progression of traffic control preemptions along an emergency vehicle route, request a specific evacuation traffic control plan, request activation of a road closure barrier system, or place a public safety or emergency-related message on a dynamic message sign.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Nevada State Police Dispatch	ADOT DEOC-Dept EM Ops Center	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Nevada State Police Dispatch	ADOT DEOC-Dept EM Ops Center	evacuation information	Existing	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
Nevada State Police Dispatch	ADOT DEOC-Dept EM Ops Center	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Nevada State Police Dispatch	ADOT DEOC-Dept EM Ops Center	incident information	Existing	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
Nevada State Police Dispatch	ADOT DEOC-Dept EM Ops Center	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
Nevada State Police Dispatch	ADOT DEOC-Dept EM Ops Center	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Nevada State Police Dispatch	ADOT DEOC-Dept EM Ops Center	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
Nevada State Police Dispatch	ADOT DEOC-Dept EM Ops Center	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Nevada State Police Dispatch	ADOT DEOC-Dept EM Ops Center	resource request	Planned	A request for resources to implement special traffic control measures, assist in clean up, verify an incident, etc. The request may poll for resource availability or request pre-staging, staging, or immediate deployment of resources. Resources may be explicitly requested or a service may be requested and the specific resource deployment may be determined by the responding agency.
Nevada State Police Dispatch	ADOT DEOC-Dept EM Ops Center	threat information	Existing	Threats regarding transportation infrastructure, facilities, or systems detected by a variety of methods (sensors, surveillance, threat analysis of advisories from outside agencies, etc.
Nevada State Police Dispatch	ADOT DEOC-Dept EM Ops Center	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Nevada State Police Dispatch	ADOT DEOC-Dept EM Ops Center	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Nevada State Police Dispatch	ADOT ECD Dispatch	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Nevada State Police Dispatch	ADOT ECD Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Nevada State Police Dispatch	ADOT ECD Dispatch	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Nevada State Police Dispatch	ADOT ECD Dispatch	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Nevada State Police Dispatch	ADOT ECD Dispatch	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
Nevada State Police Dispatch	ADOT ECD Dispatch	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Nevada State Police Dispatch	ADOT ECD Dispatch	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Nevada State Police Dispatch	ADOT ECD Dispatch	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
Nevada State Police Dispatch	ADOT ECD Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Nevada State Police Dispatch	ADOT TOC and EMC	alert notification	Existing	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
Nevada State Police Dispatch	ADOT TOC and EMC	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Nevada State Police Dispatch	ADOT TOC and EMC	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Nevada State Police Dispatch	ADOT TOC and EMC	emergency traffic control request	Existing	Special request to preempt the current traffic control strategy in effect at one or more signalized intersections or highway segments, activate traffic control and closure systems such as gates and barriers, activate safeguard systems, or use driver information systems. For example, this flow can request all signals to red-flash, request a progression of traffic control preemptions along an emergency vehicle route, request a specific evacuation traffic control plan, request activation of a road closure barrier system, or place a public safety or emergency-related message on a dynamic message sign.

Nevada State Police Dispatch	ADOT TOC and EMC	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
Nevada State Police Dispatch	ADOT TOC and EMC	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Nevada State Police Dispatch	DEMA Enforcement	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Nevada State Police Dispatch	DEMA Enforcement	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Nevada State Police Dispatch	DEMA Enforcement	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Nevada State Police Dispatch	DEMA Enforcement	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Nevada State Police Dispatch	DEMA Enforcement	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
Nevada State Police Dispatch	DEMA Enforcement	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Nevada State Police Dispatch	DEMA Enforcement	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Nevada State Police Dispatch	DEMA Enforcement	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
Nevada State Police Dispatch	DEMA Enforcement	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Nevada State Police Dispatch	DEMA SEOC Arizona DEM Military Affairs	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Nevada State Police Dispatch	DEMA SEOC Arizona DEM Military Affairs	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Nevada State Police Dispatch	DEMA SEOC Arizona DEM Military Affairs	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Nevada State Police Dispatch	DEMA SEOC Arizona DEM Military Affairs	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Nevada State Police Dispatch	DEMA SEOC Arizona DEM Military Affairs	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Nevada State Police Dispatch	DEMA SEOC Arizona DEM Military Affairs	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Nevada State Police Dispatch	DEMA SEOC Arizona DEM Military Affairs	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Nevada State Police Dispatch	DEMA SEOC Arizona DEM Military Affairs	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
Nevada State Police Dispatch	DEMA SEOC Arizona DEM Military Affairs	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Nevada State Police Dispatch	DEMA WebEOC System	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Nevada State Police Dispatch	DEMA WebEOC System	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Nevada State Police Dispatch	DEMA WebEOC System	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Nevada State Police Dispatch	DEMA WebEOC System	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Nevada State Police Dispatch	DEMA WebEOC System	incident information for public	Existing	Report of current desensitized incident information prepared for public dissemination.
Nevada State Police Dispatch	DEMA WebEOC System	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Nevada State Police Dispatch	DEMA WebEOC System	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Nevada State Police Dispatch	DEMA WebEOC System	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Nevada State Police Dispatch	DEMA WebEOC System	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
Nevada State Police Dispatch	DEMA WebEOC System	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Nevada State Police Dispatch	DPS Central Communications Center	alert notification	Existing	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
Nevada State Police Dispatch	DPS Central Communications Center	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Nevada State Police Dispatch	DPS Central Communications Center	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Nevada State Police Dispatch	DPS Central Communications Center	emergency traffic control request	Existing	Special request to preempt the current traffic control strategy in effect at one or more signalized intersections or highway segments, activate traffic control and closure systems such as gates and barriers, activate safeguard systems, or use driver information systems. For example, this flow can request all signals to red-flash, request a progression of traffic control preemptions along an emergency vehicle route, request a specific evacuation traffic control plan, request activation of a road closure barrier system, or place a public safety or emergency-related message on a dynamic message sign.
Nevada State Police Dispatch	DPS Central Communications Center	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Nevada State Police Dispatch	DPS Central Communications Center	evacuation information	Existing	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
Nevada State Police Dispatch	DPS Central Communications Center	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Nevada State Police Dispatch	DPS Central Communications Center	incident information	Existing	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
Nevada State Police Dispatch	DPS Central Communications Center	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
Nevada State Police Dispatch	DPS Central Communications Center	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Nevada State Police Dispatch	DPS Central Communications Center	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
Nevada State Police Dispatch	DPS Central Communications Center	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Nevada State Police Dispatch	DPS Central Communications Center	resource request	Planned	A request for resources to implement special traffic control measures, assist in clean up, verify an incident, etc. The request may poll for resource availability or request pre-staging, staging, or immediate deployment of resources. Resources may be explicitly requested or a service may be requested and the specific resource deployment may be determined by the responding agency.
Nevada State Police Dispatch	DPS Central Communications Center	threat information	Existing	Threats regarding transportation infrastructure, facilities, or systems detected by a variety of methods (sensors, surveillance, threat analysis of advisories from outside agencies, etc.
Nevada State Police Dispatch	DPS Central Communications Center	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Nevada State Police Dispatch	DPS Central Communications Center	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Nevada State Police Dispatch	DPS Console Interface (Other LE)	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Nevada State Police Dispatch	DPS Console Interface (Other LE)	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Nevada State Police Dispatch	DPS Console Interface (Other LE)	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Nevada State Police Dispatch	DPS Console Interface (Other LE)	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Nevada State Police Dispatch	DPS Console Interface (Other LE)	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
Nevada State Police Dispatch	DPS Console Interface (Other LE)	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Nevada State Police Dispatch	DPS Console Interface (Other LE)	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Nevada State Police Dispatch	DPS Console Interface (Other LE)	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
Nevada State Police Dispatch	DPS Console Interface (Other LE)	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Nevada State Police Dispatch	Public Private Traveler Information	alert notification	Planned	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
Nevada State Police Dispatch	Public Private Traveler Information	evacuation information	Planned	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
Nevada State Police Dispatch	Public Private Traveler Information	incident information for public	Planned	Report of current desensitized incident information prepared for public dissemination.
Nevada State Police Dispatch	Public Private Traveler Information	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Nevada State Police Dispatch	Social Media and Networking	alert notification for social media	Planned	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public via social media. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This version of the flow contains only publicly available information and is structured and formatted for publication on specific social media platforms and other public-facing sites.
Nevada State Police Dispatch	Wide Area Alerting Systems	alert notification	Planned	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
Nevada State Police Dispatch	Wide Area Alerting Systems	evacuation information	Planned	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
Nevada State Police Dispatch	Wide Area Alerting Systems	incident information for public	Planned	Report of current desensitized incident information prepared for public dissemination.
Nevada State Police Dispatch	Wide Area Alerting Systems	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
New Mexico ITS Field Equipment	ADOT RWIS	dynamic sign coordination	Existing	The direct flow of information between field equipment. This includes information used to initialize, configure, and control dynamic message signs. This flow can provide message content and delivery attributes, local message store maintenance requests, control mode commands, status queries, and all other commands and associated parameters that support local management of these devices. Current operating status of dynamic message signs is returned.
New Mexico ITS Field Equipment	ADOT RWIS	environmental sensor coordination	Planned	The direct flow of information between field equipment. This includes configuration and control of environmental sensors and the current road conditions (e.g., surface temperature, subsurface temperature, moisture, icing, treatment status) and surface weather conditions (e.g., air temperature, wind speed, precipitation, visibility) as measured and reported by fixed and/or mobile environmental sensors. Operational status of the sensors is also included.
New Mexico ITS Field Equipment	ADOT RWIS	roadway treatment coordination	Existing	The direct flow of information between field equipment. This includes control data for remotely located, automated devices, that treat the road surface (e.g., de-icing applications) and the current operational status of automated roadway treatment devices.
New Mexico ITS Field Equipment	ADOT RWIS	roadway warning coordination	Existing	The direct flow of information between field equipment. This includes information used to configure and control roadway warning systems and the current operating status of roadway warning systems.
New Mexico ITS Field Equipment	ADOT RWIS	video surveillance coordination	Existing	The direct flow of information between field equipment. This includes information used to configure and control video surveillance systems and the high fidelity, real-time traffic images and associated meta data that are returned.
New Mexico State Police Dispatch	ADOT DEOC-Dept EM Ops Center	alert notification	Existing	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
New Mexico State Police Dispatch	ADOT DEOC-Dept EM Ops Center	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
New Mexico State Police Dispatch	ADOT DEOC-Dept EM Ops Center	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
New Mexico State Police Dispatch	ADOT DEOC-Dept EM Ops Center	emergency traffic control request	Existing	Special request to preempt the current traffic control strategy in effect at one or more signalized intersections or highway segments, activate traffic control and closure systems such as gates and barriers, activate safeguard systems, or use driver information systems. For example, this flow can request all signals to red-flash, request a progression of traffic control preemptions along an emergency vehicle route, request a specific evacuation traffic control plan, request activation of a road closure barrier system, or place a public safety or emergency-related message on a dynamic message sign.
New Mexico State Police Dispatch	ADOT DEOC-Dept EM Ops Center	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
New Mexico State Police Dispatch	ADOT DEOC-Dept EM Ops Center	evacuation information	Existing	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
New Mexico State Police Dispatch	ADOT DEOC-Dept EM Ops Center	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
New Mexico State Police Dispatch	ADOT DEOC-Dept EM Ops Center	incident information	Existing	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
New Mexico State Police Dispatch	ADOT DEOC-Dept EM Ops Center	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
New Mexico State Police Dispatch	ADOT DEOC-Dept EM Ops Center	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
New Mexico State Police Dispatch	ADOT DEOC-Dept EM Ops Center	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
New Mexico State Police Dispatch	ADOT DEOC-Dept EM Ops Center	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
New Mexico State Police Dispatch	ADOT DEOC-Dept EM Ops Center	resource request	Planned	A request for resources to implement special traffic control measures, assist in clean up, verify an incident, etc. The request may poll for resource availability or request pre-staging, staging, or immediate deployment of resources. Resources may be explicitly requested or a service may be requested and the specific resource deployment may be determined by the responding agency.
New Mexico State Police Dispatch	ADOT DEOC-Dept EM Ops Center	threat information	Existing	Threats regarding transportation infrastructure, facilities, or systems detected by a variety of methods (sensors, surveillance, threat analysis of advisories from outside agencies, etc.
New Mexico State Police Dispatch	ADOT DEOC-Dept EM Ops Center	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
New Mexico State Police Dispatch	ADOT DEOC-Dept EM Ops Center	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
New Mexico State Police Dispatch	ADOT TOC Traffic Information Center	alert notification	Planned	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
New Mexico State Police Dispatch	ADOT TOC Traffic Information Center	evacuation information	Planned	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
New Mexico State Police Dispatch	ADOT TOC Traffic Information Center	incident information for public	Planned	Report of current desensitized incident information prepared for public dissemination.
New Mexico State Police Dispatch	ADOT TOC Traffic Information Center	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
New Mexico State Police Dispatch	DEMA SEOC Arizona DEM Military Affairs	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
New Mexico State Police Dispatch	DEMA SEOC Arizona DEM Military Affairs	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
New Mexico State Police Dispatch	DEMA SEOC Arizona DEM Military Affairs	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
New Mexico State Police Dispatch	DEMA SEOC Arizona DEM Military Affairs	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
New Mexico State Police Dispatch	DEMA SEOC Arizona DEM Military Affairs	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
New Mexico State Police Dispatch	DEMA SEOC Arizona DEM Military Affairs	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
New Mexico State Police Dispatch	DEMA SEOC Arizona DEM Military Affairs	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
New Mexico State Police Dispatch	DEMA SEOC Arizona DEM Military Affairs	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
New Mexico State Police Dispatch	DEMA SEOC Arizona DEM Military Affairs	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
New Mexico State Police Dispatch	DEMA WebEOC System	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
New Mexico State Police Dispatch	DEMA WebEOC System	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
New Mexico State Police Dispatch	DEMA WebEOC System	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
New Mexico State Police Dispatch	DEMA WebEOC System	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
New Mexico State Police Dispatch	DEMA WebEOC System	incident information for public	Existing	Report of current desensitized incident information prepared for public dissemination.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
New Mexico State Police Dispatch	DEMA WebEOC System	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
New Mexico State Police Dispatch	DEMA WebEOC System	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
New Mexico State Police Dispatch	DEMA WebEOC System	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
New Mexico State Police Dispatch	DEMA WebEOC System	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
New Mexico State Police Dispatch	DEMA WebEOC System	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
New Mexico State Police Dispatch	DPS Central Communications Center	alert notification	Existing	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
New Mexico State Police Dispatch	DPS Central Communications Center	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
New Mexico State Police Dispatch	DPS Central Communications Center	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
New Mexico State Police Dispatch	DPS Central Communications Center	emergency traffic control request	Existing	Special request to preempt the current traffic control strategy in effect at one or more signalized intersections or highway segments, activate traffic control and closure systems such as gates and barriers, activate safeguard systems, or use driver information systems. For example, this flow can request all signals to red-flash, request a progression of traffic control preemptions along an emergency vehicle route, request a specific evacuation traffic control plan, request activation of a road closure barrier system, or place a public safety or emergency-related message on a dynamic message sign.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
New Mexico State Police Dispatch	DPS Central Communications Center	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
New Mexico State Police Dispatch	DPS Central Communications Center	evacuation information	Existing	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
New Mexico State Police Dispatch	DPS Central Communications Center	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
New Mexico State Police Dispatch	DPS Central Communications Center	incident information	Existing	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
New Mexico State Police Dispatch	DPS Central Communications Center	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
New Mexico State Police Dispatch	DPS Central Communications Center	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
New Mexico State Police Dispatch	DPS Central Communications Center	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
New Mexico State Police Dispatch	DPS Central Communications Center	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
New Mexico State Police Dispatch	DPS Central Communications Center	resource request	Planned	A request for resources to implement special traffic control measures, assist in clean up, verify an incident, etc. The request may poll for resource availability or request pre-staging, staging, or immediate deployment of resources. Resources may be explicitly requested or a service may be requested and the specific resource deployment may be determined by the responding agency.
New Mexico State Police Dispatch	DPS Central Communications Center	threat information	Existing	Threats regarding transportation infrastructure, facilities, or systems detected by a variety of methods (sensors, surveillance, threat analysis of advisories from outside agencies, etc.
New Mexico State Police Dispatch	DPS Central Communications Center	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
New Mexico State Police Dispatch	DPS Central Communications Center	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
New Mexico State Police Dispatch	Public Private Traveler Information	alert notification	Planned	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
New Mexico State Police Dispatch	Public Private Traveler Information	evacuation information	Planned	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
New Mexico State Police Dispatch	Public Private Traveler Information	incident information for public	Planned	Report of current desensitized incident information prepared for public dissemination.
New Mexico State Police Dispatch	Public Private Traveler Information	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
New Mexico State Police Dispatch	Social Media and Networking	alert notification for social media	Planned	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public via social media. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This version of the flow contains only publicly available information and is structured and formatted for publication on specific social media platforms and other public-facing sites.
New Mexico State Police Dispatch	Wide Area Alerting Systems	alert notification	Planned	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
New Mexico State Police Dispatch	Wide Area Alerting Systems	evacuation information	Planned	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
New Mexico State Police Dispatch	Wide Area Alerting Systems	incident information for public	Planned	Report of current desensitized incident information prepared for public dissemination.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
New Mexico State Police Dispatch	Wide Area Alerting Systems	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
New Mexico Statewide TMC	ADOT DEOC-Dept EM Ops Center	emergency traffic coordination	Existing	Coordination supporting disaster response including evacuation and reentry. Includes coordination of special traffic control strategies that support efficient evacuation and reentry while protecting and optimizing movement of response vehicles and other resources responding to the emergency.
New Mexico Statewide TMC	ADOT TOC and EMC	device control request	Planned	Request for device control action
New Mexico Statewide TMC	ADOT TOC and EMC	device data	Planned	Data from detectors, environmental sensor stations, roadside equipment, and traffic control devices, including device inventory information.
New Mexico Statewide TMC	ADOT TOC and EMC	device status	Planned	Status information from devices
New Mexico Statewide TMC	ADOT TOC and EMC	emergency traffic coordination	Planned	Coordination supporting disaster response including evacuation and reentry. Includes coordination of special traffic control strategies that support efficient evacuation and reentry while protecting and optimizing movement of response vehicles and other resources responding to the emergency.
New Mexico Statewide TMC	ADOT TOC and EMC	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
New Mexico Statewide TMC	ADOT TOC and EMC	road network conditions	Planned	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.
New Mexico Statewide TMC	ADOT TOC and EMC	traffic images	Planned	High fidelity, real-time traffic images suitable for surveillance monitoring by the operator or for use in machine vision applications. This flow includes the images. Meta data that describes the images is contained in another flow.
New Mexico Truck Parking Availability System	ADOT Truck Parking Availability System (TPAS)	parking information	Existing	General parking information and status, including current parking availability, parking pricing, and parking space availability information, including features like number and type of electric charging spots.
NOAA _National Weather Service	ADOT 511 Website	qualified environmental conditions data	Planned	Current road conditions (e.g., surface temperature, subsurface temperature, moisture, icing, treatment status) and surface weather conditions (e.g., air temperature, wind speed, precipitation, visibility) that has had quality checks performed on it and has been formatted and consolidated by the Clarus system. Attributes relating to the data collection (and aggregation) are also included.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
NOAA _National Weather Service	ADOT 511 Website	weather information	Planned	Accumulated forecasted and current weather data (e.g., temperature, pressure, wind speed, wind direction, humidity, precipitation, visibility, light conditions, etc.).
NOAA _National Weather Service	ADOT DEOC-Dept EM Ops Center	weather information	Planned	Accumulated forecasted and current weather data (e.g., temperature, pressure, wind speed, wind direction, humidity, precipitation, visibility, light conditions, etc.).
NOAA _National Weather Service	ADOT Dust Detection Software System	environmental conditions data status	Planned	Status of the data quality of environmental conditions data provided by a data contributor. Includes not only status by sensor, but statistical data regarding the quality checking of data provided.
NOAA _National Weather Service	ADOT Dust Detection Software System	qualified environmental conditions data	Planned	Current road conditions (e.g., surface temperature, subsurface temperature, moisture, icing, treatment status) and surface weather conditions (e.g., air temperature, wind speed, precipitation, visibility) that has had quality checks performed on it and has been formatted and consolidated by the Clarus system. Attributes relating to the data collection (and aggregation) are also included.
NOAA _National Weather Service	ADOT Dust Detection Software System	weather information	Planned	Accumulated forecasted and current weather data (e.g., temperature, pressure, wind speed, wind direction, humidity, precipitation, visibility, light conditions, etc.).
NOAA _National Weather Service	ADOT ECD Dispatch	weather information	Planned	Accumulated forecasted and current weather data (e.g., temperature, pressure, wind speed, wind direction, humidity, precipitation, visibility, light conditions, etc.).
NOAA _National Weather Service	ADOT HazMat Response Team	weather information	Planned	Accumulated forecasted and current weather data (e.g., temperature, pressure, wind speed, wind direction, humidity, precipitation, visibility, light conditions, etc.).
NOAA _National Weather Service	ADOT TOC and EMC	environmental conditions data status	Planned	Status of the data quality of environmental conditions data provided by a data contributor. Includes not only status by sensor, but statistical data regarding the quality checking of data provided.
NOAA _National Weather Service	ADOT TOC and EMC	qualified environmental conditions data	Planned	Current road conditions (e.g., surface temperature, subsurface temperature, moisture, icing, treatment status) and surface weather conditions (e.g., air temperature, wind speed, precipitation, visibility) that has had quality checks performed on it and has been formatted and consolidated by the Clarus system. Attributes relating to the data collection (and aggregation) are also included.
NOAA _National Weather Service	ADOT TOC and EMC	weather information	Planned	Accumulated forecasted and current weather data (e.g., temperature, pressure, wind speed, wind direction, humidity, precipitation, visibility, light conditions, etc.).
NOAA _National Weather Service	ADOT TOC Traffic Information Center	weather information	Existing	Accumulated forecasted and current weather data (e.g., temperature, pressure, wind speed, wind direction, humidity, precipitation, visibility, light conditions, etc.).
NOAA _National Weather Service	ATTP Tribal Coordination Website	qualified environmental conditions data	Planned	Current road conditions (e.g., surface temperature, subsurface temperature, moisture, icing, treatment status) and surface weather conditions (e.g., air temperature, wind speed, precipitation, visibility) that has had quality checks performed on it and has been formatted and consolidated by the Clarus system. Attributes relating to the data collection (and aggregation) are also included.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
NOAA _National Weather Service	ATTP Tribal Coordination Website	weather information	Existing	Accumulated forecasted and current weather data (e.g., temperature, pressure, wind speed, wind direction, humidity, precipitation, visibility, light conditions, etc.).
NOAA _National Weather Service	AZTech RADS Data Archive	weather archive data	Planned	Accumulated forecasted and current weather data (e.g., temperature, pressure, wind speed, wind direction, humidity, precipitation, visibility, light conditions, etc.) as well as qualified environmental sensor data. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
NOAA _National Weather Service	BIA Western Regional Website	weather information	Planned	Accumulated forecasted and current weather data (e.g., temperature, pressure, wind speed, wind direction, humidity, precipitation, visibility, light conditions, etc.).
NOAA _National Weather Service	Cities and Towns EOC-EMC	weather information	Existing	Accumulated forecasted and current weather data (e.g., temperature, pressure, wind speed, wind direction, humidity, precipitation, visibility, light conditions, etc.).
NOAA _National Weather Service	Cities and Towns MCO Dispatch	environmental conditions data status	Planned	Status of the data quality of environmental conditions data provided by a data contributor. Includes not only status by sensor, but statistical data regarding the quality checking of data provided.
NOAA _National Weather Service	Cities and Towns MCO Dispatch	qualified environmental conditions data	Planned	Current road conditions (e.g., surface temperature, subsurface temperature, moisture, icing, treatment status) and surface weather conditions (e.g., air temperature, wind speed, precipitation, visibility) that has had quality checks performed on it and has been formatted and consolidated by the Clarus system. Attributes relating to the data collection (and aggregation) are also included.
NOAA _National Weather Service	Cities and Towns MCO Dispatch	weather information	Planned	Accumulated forecasted and current weather data (e.g., temperature, pressure, wind speed, wind direction, humidity, precipitation, visibility, light conditions, etc.).
NOAA _National Weather Service	Cities and Towns Police and Fire Dispatch	weather information	Existing	Accumulated forecasted and current weather data (e.g., temperature, pressure, wind speed, wind direction, humidity, precipitation, visibility, light conditions, etc.).
NOAA _National Weather Service	Cities and Towns Public Works	environmental conditions data status	Planned	Status of the data quality of environmental conditions data provided by a data contributor. Includes not only status by sensor, but statistical data regarding the quality checking of data provided.
NOAA _National Weather Service	Cities and Towns Public Works	qualified environmental conditions data	Planned	Current road conditions (e.g., surface temperature, subsurface temperature, moisture, icing, treatment status) and surface weather conditions (e.g., air temperature, wind speed, precipitation, visibility) that has had quality checks performed on it and has been formatted and consolidated by the Clarus system. Attributes relating to the data collection (and aggregation) are also included.
NOAA _National Weather Service	Cities and Towns Public Works	weather information	Planned	Accumulated forecasted and current weather data (e.g., temperature, pressure, wind speed, wind direction, humidity, precipitation, visibility, light conditions, etc.).
NOAA _National Weather Service	Cities and Towns TIC and Website	weather information	Planned	Accumulated forecasted and current weather data (e.g., temperature, pressure, wind speed, wind direction, humidity, precipitation, visibility, light conditions, etc.).

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
NOAA _National Weather Service	Cities and Towns TMC-TOC	environmental conditions data status	Planned	Status of the data quality of environmental conditions data provided by a data contributor. Includes not only status by sensor, but statistical data regarding the quality checking of data provided.
NOAA _National Weather Service	Cities and Towns TMC-TOC	qualified environmental conditions data	Planned	Current road conditions (e.g., surface temperature, subsurface temperature, moisture, icing, treatment status) and surface weather conditions (e.g., air temperature, wind speed, precipitation, visibility) that has had quality checks performed on it and has been formatted and consolidated by the Clarus system. Attributes relating to the data collection (and aggregation) are also included.
NOAA _National Weather Service	Cities and Towns TMC-TOC	weather information	Planned	Accumulated forecasted and current weather data (e.g., temperature, pressure, wind speed, wind direction, humidity, precipitation, visibility, light conditions, etc.).
NOAA _National Weather Service	County EMC-EOC	weather information	Existing	Accumulated forecasted and current weather data (e.g., temperature, pressure, wind speed, wind direction, humidity, precipitation, visibility, light conditions, etc.).
NOAA _National Weather Service	County Public Works	environmental conditions data status	Planned	Status of the data quality of environmental conditions data provided by a data contributor. Includes not only status by sensor, but statistical data regarding the quality checking of data provided.
NOAA _National Weather Service	County Public Works	qualified environmental conditions data	Planned	Current road conditions (e.g., surface temperature, subsurface temperature, moisture, icing, treatment status) and surface weather conditions (e.g., air temperature, wind speed, precipitation, visibility) that has had quality checks performed on it and has been formatted and consolidated by the Clarus system. Attributes relating to the data collection (and aggregation) are also included.
NOAA _National Weather Service	County Public Works	weather information	Existing	Accumulated forecasted and current weather data (e.g., temperature, pressure, wind speed, wind direction, humidity, precipitation, visibility, light conditions, etc.).
NOAA _National Weather Service	County Sheriff Dispatch	weather information	Planned	Accumulated forecasted and current weather data (e.g., temperature, pressure, wind speed, wind direction, humidity, precipitation, visibility, light conditions, etc.).
NOAA _National Weather Service	County TMC-TOC	environmental conditions data status	Planned	Status of the data quality of environmental conditions data provided by a data contributor. Includes not only status by sensor, but statistical data regarding the quality checking of data provided.
NOAA _National Weather Service	County TMC-TOC	qualified environmental conditions data	Planned	Current road conditions (e.g., surface temperature, subsurface temperature, moisture, icing, treatment status) and surface weather conditions (e.g., air temperature, wind speed, precipitation, visibility) that has had quality checks performed on it and has been formatted and consolidated by the Clarus system. Attributes relating to the data collection (and aggregation) are also included.
NOAA _National Weather Service	County TMC-TOC	weather information	Planned	Accumulated forecasted and current weather data (e.g., temperature, pressure, wind speed, wind direction, humidity, precipitation, visibility, light conditions, etc.).
NOAA _National Weather Service	County Website and NIXLE	weather information	Planned	Accumulated forecasted and current weather data (e.g., temperature, pressure, wind speed, wind direction, humidity, precipitation, visibility, light conditions, etc.).

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
NOAA _National Weather Service	DEMA SEOC Arizona DEM Military Affairs	weather information	Existing	Accumulated forecasted and current weather data (e.g., temperature, pressure, wind speed, wind direction, humidity, precipitation, visibility, light conditions, etc.).
NOAA _National Weather Service	DPS Central Communications Center	weather information	Planned	Accumulated forecasted and current weather data (e.g., temperature, pressure, wind speed, wind direction, humidity, precipitation, visibility, light conditions, etc.).
NOAA _National Weather Service	DPS Data Archive	weather archive data	Planned	Accumulated forecasted and current weather data (e.g., temperature, pressure, wind speed, wind direction, humidity, precipitation, visibility, light conditions, etc.) as well as qualified environmental sensor data. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
NOAA _National Weather Service	Maricopa County EOC	weather information	Planned	Accumulated forecasted and current weather data (e.g., temperature, pressure, wind speed, wind direction, humidity, precipitation, visibility, light conditions, etc.).
NOAA _National Weather Service	Mexico Customs and Border Patrol	weather information	Planned	Accumulated forecasted and current weather data (e.g., temperature, pressure, wind speed, wind direction, humidity, precipitation, visibility, light conditions, etc.).
NOAA _National Weather Service	Mexico Public Safety	weather information	Planned	Accumulated forecasted and current weather data (e.g., temperature, pressure, wind speed, wind direction, humidity, precipitation, visibility, light conditions, etc.).
NOAA _National Weather Service	Public Private Traveler Information	qualified environmental conditions data	Planned	Current road conditions (e.g., surface temperature, subsurface temperature, moisture, icing, treatment status) and surface weather conditions (e.g., air temperature, wind speed, precipitation, visibility) that has had quality checks performed on it and has been formatted and consolidated by the Clarus system. Attributes relating to the data collection (and aggregation) are also included.
NOAA _National Weather Service	Public Private Traveler Information	weather information	Planned	Accumulated forecasted and current weather data (e.g., temperature, pressure, wind speed, wind direction, humidity, precipitation, visibility, light conditions, etc.).
NOAA _National Weather Service	Wide Area Alerting Systems	weather information	Planned	Accumulated forecasted and current weather data (e.g., temperature, pressure, wind speed, wind direction, humidity, precipitation, visibility, light conditions, etc.).
PAG Data User Systems	ADOT HPMS Data Archive	archived data product requests	Planned	A user-specified request for archived data products (i.e., data, meta data, or data catalogs). The request also includes information that is used to identify and authenticate the user and support electronic payment requirements, if any.
PAG Data User Systems	Cities and Towns Data Archive	archived data product requests	Existing	A user-specified request for archived data products (i.e., data, meta data, or data catalogs). The request also includes information that is used to identify and authenticate the user and support electronic payment requirements, if any.
PAG Data User Systems	MPO-COG Planning Traffic Database	archived data product requests	Planned	A user-specified request for archived data products (i.e., data, meta data, or data catalogs). The request also includes information that is used to identify and authenticate the user and support electronic payment requirements, if any.
PAG Data User Systems	PAG Planning Traffic Database	archived data product requests	Planned	A user-specified request for archived data products (i.e., data, meta data, or data catalogs). The request also includes information that is used to identify and authenticate the user and support electronic payment requirements, if any.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
PAG Data User Systems	State Universities Data Archives	archived data product requests	Planned	A user-specified request for archived data products (i.e., data, meta data, or data catalogs). The request also includes information that is used to identify and authenticate the user and support electronic payment requirements, if any.
PAG Planning Traffic Database	ADOT AZ Crash Information System (ACIS)	archive analysis results	Planned	Processed information products, supporting meta data, and any associated transaction information resulting from data mining, analytical processing, aggregation or summarization, report formulation, or other on-line processing and analysis of archived data.
PAG Planning Traffic Database	ADOT AZ Crash Information System (ACIS)	archive request confirmation	Planned	Confirmation that an archive request has been received and processed with information on the disposition of the request.
PAG Planning Traffic Database	ADOT AZ Crash Information System (ACIS)	archived data products	Planned	Raw or processed data, meta data, data catalogs and other data products provided to a user system upon request. The response may also include any associated transaction information.
PAG Planning Traffic Database	ADOT HPMS Data Archive	archive coordination	Planned	Catalog data, meta data, published data, and other information exchanged between archives to support data synchronization and satisfy user data requests.
PAG Planning Traffic Database	ADOT TOC Data User System	archive analysis results	Planned	Processed information products, supporting meta data, and any associated transaction information resulting from data mining, analytical processing, aggregation or summarization, report formulation, or other on-line processing and analysis of archived data.
PAG Planning Traffic Database	ADOT TOC Data User System	archive request confirmation	Planned	Confirmation that an archive request has been received and processed with information on the disposition of the request.
PAG Planning Traffic Database	ADOT TOC Data User System	archived data products	Planned	Raw or processed data, meta data, data catalogs and other data products provided to a user system upon request. The response may also include any associated transaction information.
PAG Planning Traffic Database	ADOT TOC Traffic Information Center	archive status	Planned	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
PAG Planning Traffic Database	Archive Data Users	archived data products	Planned	Raw or processed data, meta data, data catalogs and other data products provided to a user system upon request. The response may also include any associated transaction information.
PAG Planning Traffic Database	DPS Data Archive	archive coordination	Planned	Catalog data, meta data, published data, and other information exchanged between archives to support data synchronization and satisfy user data requests.
PAG Planning Traffic Database	PAG Data User Systems	archived data products	Planned	Raw or processed data, meta data, data catalogs and other data products provided to a user system upon request. The response may also include any associated transaction information.
PAG Planning Traffic Database	Tribal Data Archive	archive coordination	Planned	Catalog data, meta data, published data, and other information exchanged between archives to support data synchronization and satisfy user data requests.
Payment Administration Center	Basic Private Vehicle	user account reports	Planned	Reports on services offered/provided and associated charges.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Payment Administration Center	Cities and Towns Transit Dispatch	payment methods	Planned	A list of valid payment methods.
Payment Administration Center	Cities and Towns Transit Dispatch	reconciliation response	Planned	Response indicating that reconciliation of charges using a smart card have been processed.
Payment Administration Center	Cities and Towns Transit Dispatch	trip access coordination	Planned	Access token granting the bearer the right to use a given transportation resource; typically used when one payment provider is paid for a trip using multiple travel providers; the token is used by the Traveler to gain access to one or more of the travel provider resource (e.g., a transit ride).
Payment Administration Center	Cities and Towns Transit Vehicles	authorization response	Planned	Notification of status of authorization request.
Payment Administration Center	Electric Vehicle Charging Stations	authorization response	Planned	Notification of status of authorization request.
Payment Administration Center	Financial Institution	payment request	Planned	Request for payment from financial institution or related financial service requests (e.g., balance inquiry)
Payment Administration Center	Local Dial-A-Ride Transit Dispatchers	payment methods	Planned	A list of valid payment methods.
Payment Administration Center	Local Dial-A-Ride Transit Dispatchers	reconciliation response	Planned	Response indicating that reconciliation of charges using a smart card have been processed.
Payment Administration Center	Local Dial-A-Ride Transit Vehicles	authorization response	Planned	Notification of status of authorization request.
Payment Administration Center	NAIPTA (dba Mountain Line) Paratransit	payment methods	Planned	A list of valid payment methods.
Payment Administration Center	NAIPTA (dba Mountain Line) Paratransit	reconciliation response	Planned	Response indicating that reconciliation of charges using a smart card have been processed.
Payment Administration Center	NAIPTA (dba Mountain Line) Paratransit Vehicles	authorization response	Planned	Notification of status of authorization request.
Payment Administration Center	NAIPTA (dba Mountain Line) Transit Buses	authorization response	Planned	Notification of status of authorization request.
Payment Administration Center	NAIPTA (dba Mountain Line) Transit Management Center	payment methods	Planned	A list of valid payment methods.
Payment Administration Center	NAIPTA (dba Mountain Line) Transit Management Center	reconciliation response	Planned	Response indicating that reconciliation of charges using a smart card have been processed.
Payment Administration Center	NAIPTA (dba Mountain Line) Website and FLGRide	reconciliation response	Planned	Response indicating that reconciliation of charges using a smart card have been processed.
Payment Administration Center	Personal Information Devices for Travelers	traveler payment request	Planned	Request for information supporting payments. For fee structures that include incentives, the request may support either an account debit or an account credit or reimbursement.
Payment Administration Center	Personal Information Devices for Travelers	user account reports	Planned	Reports on services offered/provided and associated charges.
Payment Administration Center	Private Transit Routing Service Provider	authorization response	Planned	Notification of status of authorization request.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Payment Administration Center	Private Transit Routing Service Provider	traveler payment request	Planned	Request for information supporting payments. For fee structures that include incentives, the request may support either an account debit or an account credit or reimbursement.
Payment Administration Center	Private Transit Routing Service Provider	user account reports	Planned	Reports on services offered/provided and associated charges.
Payment Administration Center	Private Vehicle OBE	user account reports	Planned	Reports on services offered/provided and associated charges.
Payment Administration Center	Public Private Traveler Information	reconciliation response	Planned	Response indicating that reconciliation of charges using a smart card have been processed.
Payment Administration Center	Transit Providers Dispatch (Public and Private)	payment methods	Planned	A list of valid payment methods.
Payment Administration Center	Transit Providers Dispatch (Public and Private)	reconciliation response	Planned	Response indicating that reconciliation of charges using a smart card have been processed.
Payment Administration Center	Transit Providers Vehicles (Public and Private)	authorization response	Planned	Notification of status of authorization request.
Payment Administration Center	Tribal Transit Centers	payment methods	Planned	A list of valid payment methods.
Payment Administration Center	Tribal Transit Centers	reconciliation response	Existing	Response indicating that reconciliation of charges using a smart card have been processed.
Payment Administration Center	Tribal Transit Vehicles	authorization response	Planned	Notification of status of authorization request.
Payment Administration Center	YCAT Buses	authorization response	Planned	Notification of status of authorization request.
Payment Administration Center	YCAT Kiosks	authorization response	Planned	Notification of status of authorization request.
Payment Administration Center	YCAT Transit Passes	authorization response	Planned	Notification of status of authorization request.
Payment Administration Center	YCAT Website	reconciliation response	Planned	Response indicating that reconciliation of charges using a smart card have been processed.
Payment Administration Center	YCAT Website	trip access coordination	Planned	Access token granting the bearer the right to use a given transportation resource; typically used when one payment provider is paid for a trip using multiple travel providers; the token is used by the Traveler to gain access to one or more of the travel provider resource (e.g., a transit ride).
Payment Administration Center	Yuma County Area Transit (YCAT)	payment methods	Planned	A list of valid payment methods.
Payment Administration Center	Yuma County Area Transit (YCAT)	reconciliation response	Planned	Response indicating that reconciliation of charges using a smart card have been processed.
Personal Information Devices for Travelers	ADOT 511 Website	emergency traveler information request	Existing	Request for alerts, evacuation information, and other emergency information provided to the traveling public.
Personal Information Devices for Travelers	ADOT 511 Website	evacuation assistance request	Existing	A request for evacuation assistance, which may be registered in advance or issued during an evacuation. It specifies the location, number of people that need to be evacuated, and any special needs/requirements.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Personal Information Devices for Travelers	ADOT 511 Website	shelter request	Existing	A request for shelter information, recommendations, or assignment/reservation. Information provided my include name, current location, number of people in the group, additional requirements (e.g., evacuating with pets, needed medical support).
Personal Information Devices for Travelers	ADOT 511 Website	traveler request	Existing	A request for traveler information including traffic, transit, toll, parking, road weather conditions, event, and passenger rail information. The request identifies the type of information, the area of interest, parameters that are used to prioritize or filter the returned information, and sorting preferences.
Personal Information Devices for Travelers	ADOT 511 Website	traveler sourced updates	Existing	Traveler posts on traffic and road conditions, parking availability, transit services, traveler services, shelter information, hazards, debris, obstacles, and other real-time crowd-sourced data that may be shared with other travelers.
Personal Information Devices for Travelers	Cities and Towns Transit Dispatch	actuate secure payment	Planned	Initiation of a payment action, ideally based on an encrypted token or biometric marker. Such a payment action could be a simple validation that the secure token allows the user access to the travel resource, or it could be the initiation of a payment transaction.
Personal Information Devices for Travelers	Cities and Towns Transit Dispatch	transit information user request	Planned	Request for special transit routing, real-time schedule information, and availability information.
Personal Information Devices for Travelers	Cities and Towns Transit Dispatch	traveler payment information	Planned	Information provided for payment of road use charges, tolls or parking fees including identification that can be used to identify the payment account or source and related vehicle and service information that are used to determine the type and price of service requested. The information exchange normally supports an account debit to pay fees, but an account credit may be initiated where pricing strategies include incentives.
Personal Information Devices for Travelers	Cities and Towns Transit Dispatch	user account setup	Planned	Billing information, vehicle information (or registration information), and requests for reports. Also includes subsequent account changes.
Personal Information Devices for Travelers	Cities and Towns Transit Vehicles	transit stop request	Planned	Notification that a transit stop has been requested by a transit user at a roadside stop. This flow identifies the route, stop, and the time of the request.
Personal Information Devices for Travelers	Local Dial-A-Ride Transit Dispatchers	transit information user request	Planned	Request for special transit routing, real-time schedule information, and availability information.
Personal Information Devices for Travelers	MCDOT Service Monitoring Sys for Connected Vehicles	personnel device status	Existing	Monitoring of Personnel Device status including current mode, operational status, and configuration settings. It includes device housekeeping/heartbeat monitoring and includes network information, the status of installed applications, and the configuration of managed devices.
Personal Information Devices for Travelers	NAIPTA (dba Mountain Line) Transit Management Center	actuate secure payment	Planned	Initiation of a payment action, ideally based on an encrypted token or biometric marker. Such a payment action could be a simple validation that the secure token allows the user access to the travel resource, or it could be the initiation of a payment transaction.
Personal Information Devices for Travelers	NAIPTA (dba Mountain Line) Transit Management Center	transit information user request	Planned	Request for special transit routing, real-time schedule information, and availability information.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Personal Information Devices for Travelers	NAIPTA (dba Mountain Line) Transit Management Center	traveler payment information	Planned	Information provided for payment of road use charges, tolls or parking fees including identification that can be used to identify the payment account or source and related vehicle and service information that are used to determine the type and price of service requested. The information exchange normally supports an account debit to pay fees, but an account credit may be initiated where pricing strategies include incentives.
Personal Information Devices for Travelers	NAIPTA (dba Mountain Line) Transit Management Center	user account setup	Planned	Billing information, vehicle information (or registration information), and requests for reports. Also includes subsequent account changes.
Personal Information Devices for Travelers	NAIPTA (dba Mountain Line) Website and FLGRide	traveler request	Planned	A request for traveler information including traffic, transit, toll, parking, road weather conditions, event, and passenger rail information. The request identifies the type of information, the area of interest, parameters that are used to prioritize or filter the returned information, and sorting preferences.
Personal Information Devices for Travelers	Payment Administration Center	traveler payment information	Planned	Information provided for payment of road use charges, tolls or parking fees including identification that can be used to identify the payment account or source and related vehicle and service information that are used to determine the type and price of service requested. The information exchange normally supports an account debit to pay fees, but an account credit may be initiated where pricing strategies include incentives.
Personal Information Devices for Travelers	Payment Administration Center	user account setup	Planned	Billing information, vehicle information (or registration information), and requests for reports. Also includes subsequent account changes.
Personal Information Devices for Travelers	Public Private Traveler Information	emergency traveler information request	Planned	Request for alerts, evacuation information, and other emergency information provided to the traveling public.
Personal Information Devices for Travelers	Public Private Traveler Information	evacuation assistance request	Existing	A request for evacuation assistance, which may be registered in advance or issued during an evacuation. It specifies the location, number of people that need to be evacuated, and any special needs/requirements.
Personal Information Devices for Travelers	Public Private Traveler Information	shelter request	Existing	A request for shelter information, recommendations, or assignment/reservation. Information provided my include name, current location, number of people in the group, additional requirements (e.g., evacuating with pets, needed medical support).
Personal Information Devices for Travelers	Public Private Traveler Information	traveler request	Planned	A request for traveler information including traffic, transit, toll, parking, road weather conditions, event, and passenger rail information. The request identifies the type of information, the area of interest, parameters that are used to prioritize or filter the returned information, and sorting preferences.
Personal Information Devices for Travelers	Public Private Traveler Information	traveler sourced updates	Existing	Traveler posts on traffic and road conditions, parking availability, transit services, traveler services, shelter information, hazards, debris, obstacles, and other real-time crowd-sourced data that may be shared with other travelers.
Personal Information Devices for Travelers	Public Private Traveler Information	trip confirmation	Planned	Acknowledgement by the driver/traveler of acceptance of a trip plan with associated personal and payment information required to confirm reservations. Conversely, this flow may also reject the proposed trip plan. Confirmations include the selected route and subsequent trip confirmation messages will be issued for route changes.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Personal Information Devices for Travelers	Public Private Traveler Information	trip request	Planned	Request for trip planning services that identifies the trip origin, destination(s), timing, preferences, and constraints. The request may also include the requestor's location or a request for transit and parking reservations, electric charging station access, and ridesharing options associated with the trip. The trip request also covers requests to revise a previously planned trip and interim updates that are provided as the trip is interactively planned.
Personal Information Devices for Travelers	Public Private Traveler Information	user profile	Planned	Information provided to register for a travel service and create a user account. The provided information includes personal identification, traveler preferences (e.g., travel mode, micro-mobility options, accessibility needs, and assistance needs), priorities for the preferences, device information, a user ID and password, and information to support payment transactions, if applicable.
Personal Information Devices for Travelers	Transit Providers Dispatch (Public and Private)	actuate secure payment	Planned	Initiation of a payment action, ideally based on an encrypted token or biometric marker. Such a payment action could be a simple validation that the secure token allows the user access to the travel resource, or it could be the initiation of a payment transaction.
Personal Information Devices for Travelers	Transit Providers Dispatch (Public and Private)	transit information user request	Planned	Request for special transit routing, real-time schedule information, and availability information.
Personal Information Devices for Travelers	Transit Providers Dispatch (Public and Private)	traveler payment information	Planned	Information provided for payment of road use charges, tolls or parking fees including identification that can be used to identify the payment account or source and related vehicle and service information that are used to determine the type and price of service requested. The information exchange normally supports an account debit to pay fees, but an account credit may be initiated where pricing strategies include incentives.
Personal Information Devices for Travelers	Transit Providers Dispatch (Public and Private)	user account setup	Planned	Billing information, vehicle information (or registration information), and requests for reports. Also includes subsequent account changes.
Personal Information Devices for Travelers	Travelers	traveler interface updates	Existing	Visual or audio information (e.g., routes, messages, guidance, emergency information) that is provided to the traveler.
Personal Information Devices for Travelers	Tribal Transit Centers	traveler payment information	Planned	Information provided for payment of road use charges, tolls or parking fees including identification that can be used to identify the payment account or source and related vehicle and service information that are used to determine the type and price of service requested. The information exchange normally supports an account debit to pay fees, but an account credit may be initiated where pricing strategies include incentives.
Personal Information Devices for Travelers	Tribal Transit Centers	user account setup	Planned	Billing information, vehicle information (or registration information), and requests for reports. Also includes subsequent account changes.
Personal Information Devices for Travelers	Wide Area Alerting Systems	emergency traveler information request	Planned	Request for alerts, evacuation information, and other emergency information provided to the traveling public.
Personal Information Devices for Travelers	Wide Area Alerting Systems	evacuation assistance request	Planned	A request for evacuation assistance, which may be registered in advance or issued during an evacuation. It specifies the location, number of people that need to be evacuated, and any special needs/requirements.
Personal Information Devices for Travelers	Wide Area Alerting Systems	shelter request	Planned	A request for shelter information, recommendations, or assignment/reservation. Information provided my include name, current location, number of people in the group, additional requirements (e.g., evacuating with pets, needed medical support).

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Personal Information Devices for Travelers	Wide Area Alerting Systems	traveler sourced updates	Planned	Traveler posts on traffic and road conditions, parking availability, transit services, traveler services, shelter information, hazards, debris, obstacles, and other real-time crowd-sourced data that may be shared with other travelers.
Personal Information Devices for Travelers	YCAT Website	traveler request	Planned	A request for traveler information including traffic, transit, toll, parking, road weather conditions, event, and passenger rail information. The request identifies the type of information, the area of interest, parameters that are used to prioritize or filter the returned information, and sorting preferences.
Personal Information Devices for Travelers	YCAT Website	trip confirmation	Planned	Acknowledgement by the driver/traveler of acceptance of a trip plan with associated personal and payment information required to confirm reservations. Conversely, this flow may also reject the proposed trip plan. Confirmations include the selected route and subsequent trip confirmation messages will be issued for route changes.
Personal Information Devices for Travelers	YCAT Website	trip request	Planned	Request for trip planning services that identifies the trip origin, destination(s), timing, preferences, and constraints. The request may also include the requestor's location or a request for transit and parking reservations, electric charging station access, and ridesharing options associated with the trip. The trip request also covers requests to revise a previously planned trip and interim updates that are provided as the trip is interactively planned.
Personal Information Devices for Travelers	YCAT Website	user profile	Planned	Information provided to register for a travel service and create a user account. The provided information includes personal identification, traveler preferences (e.g., travel mode, micro-mobility options, accessibility needs, and assistance needs), priorities for the preferences, device information, a user ID and password, and information to support payment transactions, if applicable.
Personal Information Devices for Travelers	Yuma County Area Transit (YCAT)	actuate secure payment	Planned	Initiation of a payment action, ideally based on an encrypted token or biometric marker. Such a payment action could be a simple validation that the secure token allows the user access to the travel resource, or it could be the initiation of a payment transaction.
Personal Information Devices for Travelers	Yuma County Area Transit (YCAT)	transit information user request	Planned	Request for special transit routing, real-time schedule information, and availability information.
Personal Information Devices for Travelers	Yuma County Area Transit (YCAT)	traveler payment information	Planned	Information provided for payment of road use charges, tolls or parking fees including identification that can be used to identify the payment account or source and related vehicle and service information that are used to determine the type and price of service requested. The information exchange normally supports an account debit to pay fees, but an account credit may be initiated where pricing strategies include incentives.
Personal Information Devices for Travelers	Yuma County Area Transit (YCAT)	user account setup	Planned	Billing information, vehicle information (or registration information), and requests for reports. Also includes subsequent account changes.
POE Administration Center	ADOT MVD Commercial Vehicle Administration	client verification request	Existing	Request for information such as commercial drivers license information and carrier safety status.
POE Administration Center	ADOT MVD Commercial Vehicle Administration	pre-arrival notification	Existing	Identification of a vehicle or driver that is approaching a border crossing.
POE Administration Center	Commercial Vehicle Driver and Vehicle Verification Systems	border information archive data	Planned	Border inspection activities data. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
POE Administration Center	Commercial Vehicle Driver and Vehicle Verification Systems	client verification request	Existing	Request for information such as commercial drivers license information and carrier safety status.
POE Administration Center	Commercial Vehicle Driver and Vehicle Verification Systems	pre-arrival notification	Existing	Identification of a vehicle or driver that is approaching a border crossing.
POE Administration Center	DEMA Data Archive	border information archive data	Planned	Border inspection activities data. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
POE Administration Center	DPS Data Archive	border information archive data	Planned	Border inspection activities data. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
POE Administration Center	Fleet Management Systems	clearance notification	Existing	Notification that cargo has been cleared through customs.
POE Administration Center	Fleet Management Systems	expedited clearance information	Existing	Includes carrier ID, importer ID, broker ID, conveyance ID, driver ID, service options, and associated information that is used to support expedited border clearance.
POE Administration Center	Fleet Management Systems	expedited clearance status	Existing	Status of expedited clearance registration.
POE Administration Center	Fleet Management Systems	manifest receipt confirmation	Existing	Confirmation that a shippers manifest has been received.
POE Administration Center	Freight Shipping System	clearance notification	Existing	Notification that cargo has been cleared through customs.
POE Administration Center	International Fuel Tax Agreement (IFTA) Clearinghouse	client verification request	Existing	Request for information such as commercial drivers license information and carrier safety status.
POE Administration Center	International Fuel Tax Agreement (IFTA) Clearinghouse	pre-arrival notification	Existing	Identification of a vehicle or driver that is approaching a border crossing.
POE Administration Center	International Registration Plan (IRP) Clearinghouse	clearance notification	Existing	Notification that cargo has been cleared through customs.
POE Administration Center	International Registration Plan (IRP) Clearinghouse	client verification request	Existing	Request for information such as commercial drivers license information and carrier safety status.
POE Administration Center	International Registration Plan (IRP) Clearinghouse	pre-arrival notification	Existing	Identification of a vehicle or driver that is approaching a border crossing.
POE Administration Center	POE Data Archive	border information archive data	Planned	Border inspection activities data. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
POE Administration Center	POE Roadway Inspection Systems	consolidated agency response	Existing	Electronic manifest data as well as commercial vehicle screening results.
POE Administration Center	POE Roadway Inspection Systems	manifest data	Existing	Identifies Port of Entry, date, and information on carrier and goods, origin, etc.
POE Administration Center	POE Roadway Inspection Systems	traveler personal information	Existing	This flow includes biometric and other data to allow recognition of travelers.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
POE Administration Center	Safety Fitness Electronic Record (SAFER)	client verification request	Existing	Request for information such as commercial drivers license information and carrier safety status.
POE Administration Center	Safety Fitness Electronic Record (SAFER)	pre-arrival notification	Existing	Identification of a vehicle or driver that is approaching a border crossing.
POE Administration Center	US VISIT System	traveler personal information	Existing	This flow includes biometric and other data to allow recognition of travelers.
POE Data Archive	ADOT ECD CVO Administration Center	archive status	Planned	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
POE Data Archive	ADOT ECD Dispatch	archive status	Planned	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
POE Data Archive	ADOT Motor Vehicle Division (MVD) Database	archive coordination	Planned	Catalog data, meta data, published data, and other information exchanged between archives to support data synchronization and satisfy user data requests.
POE Data Archive	ADOT MVD Commercial Vehicle Administration	archive status	Planned	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
POE Data Archive	Archive Data Users	archive analysis results	Planned	Processed information products, supporting meta data, and any associated transaction information resulting from data mining, analytical processing, aggregation or summarization, report formulation, or other on-line processing and analysis of archived data.
POE Data Archive	Archive Data Users	archive request confirmation	Planned	Confirmation that an archive request has been received and processed with information on the disposition of the request.
POE Data Archive	Archive Data Users	archived data products	Planned	Raw or processed data, meta data, data catalogs and other data products provided to a user system upon request. The response may also include any associated transaction information.
POE Data Archive	Commercial Vehicle Driver and Vehicle Verification Systems	archive coordination	Planned	Catalog data, meta data, published data, and other information exchanged between archives to support data synchronization and satisfy user data requests.
POE Data Archive	Commercial Vehicle Driver and Vehicle Verification Systems	archive status	Existing	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
POE Data Archive	DEMA Data Archive	archive coordination	Planned	Catalog data, meta data, published data, and other information exchanged between archives to support data synchronization and satisfy user data requests.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
POE Data Archive	DEMA SEOC Arizona DEM Military Affairs	archive status	Planned	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
POE Data Archive	DPS Commercial Vehicle Enforcement	archive status	Planned	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
POE Data Archive	DPS Data Archive	archive coordination	Planned	Catalog data, meta data, published data, and other information exchanged between archives to support data synchronization and satisfy user data requests.
POE Data Archive	International Fuel Tax Agreement (IFTA) Clearinghouse	archive status	Planned	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
POE Data Archive	International Registration Plan (IRP) Clearinghouse	archive status	Planned	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
POE Data Archive	Mexico Customs and Border Patrol	archive status	Planned	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
POE Data Archive	Mexico Public Safety	archive status	Planned	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
POE Data Archive	POE Administration Center	archive status	Planned	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
POE Data Archive	POE Data User and ISP Systems	archived data products	Planned	Raw or processed data, meta data, data catalogs and other data products provided to a user system upon request. The response may also include any associated transaction information.
POE Data Archive	POE Roadway Inspection Systems	archive status	Planned	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
POE Data Archive	Safety Fitness Electronic Record (SAFER)	archive status	Planned	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
POE Data Archive	Tribal Public Safety Dispatch	archive status	Planned	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
POE Data User and ISP Systems	ADOT HPMS Data Archive	archived data product requests	Planned	A user-specified request for archived data products (i.e., data, meta data, or data catalogs). The request also includes information that is used to identify and authenticate the user and support electronic payment requirements, if any.
POE Data User and ISP Systems	Cities and Towns Data Archive	archived data product requests	Planned	A user-specified request for archived data products (i.e., data, meta data, or data catalogs). The request also includes information that is used to identify and authenticate the user and support electronic payment requirements, if any.
POE Data User and ISP Systems	Commercial Vehicle Driver and Vehicle Verification Systems	archived data product requests	Planned	A user-specified request for archived data products (i.e., data, meta data, or data catalogs). The request also includes information that is used to identify and authenticate the user and support electronic payment requirements, if any.
POE Data User and ISP Systems	DEMA Data Archive	archived data product requests	Planned	A user-specified request for archived data products (i.e., data, meta data, or data catalogs). The request also includes information that is used to identify and authenticate the user and support electronic payment requirements, if any.
POE Data User and ISP Systems	POE Data Archive	archived data product requests	Planned	A user-specified request for archived data products (i.e., data, meta data, or data catalogs). The request also includes information that is used to identify and authenticate the user and support electronic payment requirements, if any.
POE Roadway Inspection Systems	ADOT ECD CVO Administration Center	arrival notification	Planned	Notification of arrival (and departure) of a motor vehicle at the inspection station.
POE Roadway Inspection Systems	ADOT ECD CVO Administration Center	border security input	Planned	Information regarding security related events occurring at the border.
POE Roadway Inspection Systems	ADOT ECD CVO Administration Center	inspection results	Planned	Report of results of border inspection on a particular load.
POE Roadway Inspection Systems	Commercial Vehicle Driver and Vehicle Verification Systems	arrival notification	Existing	Notification of arrival (and departure) of a motor vehicle at the inspection station.
POE Roadway Inspection Systems	Commercial Vehicle Driver and Vehicle Verification Systems	traveler archive data	Planned	Data associated with traveler information services including service requests, facility usage, rideshare, routing, and traveler payment transaction data. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
POE Roadway Inspection Systems	Commercial Vehicles	request tag data	Existing	Request for tag information including tag id and associated data.
POE Roadway Inspection Systems	DPS Commercial Vehicle Enforcement	arrival notification	Planned	Notification of arrival (and departure) of a motor vehicle at the inspection station.
POE Roadway Inspection Systems	Freight Containers	request tag data	Planned	Request for tag information including tag id and associated data.
POE Roadway Inspection Systems	International Fuel Tax Agreement (IFTA) Clearinghouse	arrival notification	Existing	Notification of arrival (and departure) of a motor vehicle at the inspection station.
POE Roadway Inspection Systems	International Registration Plan (IRP) Clearinghouse	arrival notification	Existing	Notification of arrival (and departure) of a motor vehicle at the inspection station.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
POE Roadway Inspection Systems	Mexico Customs and Border Patrol	alert status	Planned	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
POE Roadway Inspection Systems	POE Administration Center	border security input	Existing	Information regarding security related events occurring at the border.
POE Roadway Inspection Systems	POE Administration Center	inspection results	Existing	Report of results of border inspection on a particular load.
POE Roadway Inspection Systems	POE Data Archive	traveler archive data	Planned	Data associated with traveler information services including service requests, facility usage, rideshare, routing, and traveler payment transaction data. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
POE Roadway Inspection Systems	Public Private Traveler Information	border crossing status information	Existing	Port of entry status including current wait-times, lane configuration and status including closures and restrictions, and notification of incidents at the border
POE Roadway Inspection Systems	Public Private Traveler Information	emergency traveler information	Planned	Public notification of an emergency such as a natural or man-made disaster, civil emergency, or child abduction. This flow also includes evacuation information including evacuation instructions, evacuation zones, recommended evacuation times, tailored evacuation routes and destinations, traffic and road conditions along the evacuation routes, traveler services and shelter information, and reentry times and instructions.
POE Roadway Inspection Systems	Safety Fitness Electronic Record (SAFER)	arrival notification	Planned	Notification of arrival (and departure) of a motor vehicle at the inspection station.
POE Roadway Inspection Systems	Utah State Police Dispatch	alert status	Planned	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
POE Roadway Inspection Systems	Wide Area Alerting Systems	emergency traveler information	Planned	Public notification of an emergency such as a natural or man-made disaster, civil emergency, or child abduction. This flow also includes evacuation information including evacuation instructions, evacuation zones, recommended evacuation times, tailored evacuation routes and destinations, traffic and road conditions along the evacuation routes, traveler services and shelter information, and reentry times and instructions.
Private Transit Routing Service Provider	Cities and Towns Transit Dispatch	actuate secure payment	Planned	Initiation of a payment action, ideally based on an encrypted token or biometric marker. Such a payment action could be a simple validation that the secure token allows the user access to the travel resource, or it could be the initiation of a payment transaction.
Private Transit Routing Service Provider	Cities and Towns Transit Dispatch	authorization request	Planned	Request to determine if a transportation user is authorized to use a particular transportation resource.
Private Transit Routing Service Provider	Cities and Towns Transit Dispatch	fare collection data	Planned	Fare collection information including the summary of fare system data and financial payment transaction data.
Private Transit Routing Service Provider	Cities and Towns Transit Dispatch	transit information user request	Planned	Request for special transit routing, real-time schedule information, and availability information.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Private Transit Routing Service Provider	Cities and Towns Transit Dispatch	transit stop passenger status	Planned	The number of passengers waiting at a PT stop with optional route and destination information for waiting passengers to allow current demand at each stop to be monitored and factored into current transit service operations and transit performance monitoring. The stop identity is included.
Private Transit Routing Service Provider	Cities and Towns Transit Dispatch	transit traveler request	Planned	Request by a Transit traveler to summon assistance, request transit information, or request any other transit services.
Private Transit Routing Service Provider	Cities and Towns Transit Dispatch	traveler payment information	Planned	Information provided for payment of road use charges, tolls or parking fees including identification that can be used to identify the payment account or source and related vehicle and service information that are used to determine the type and price of service requested. The information exchange normally supports an account debit to pay fees, but an account credit may be initiated where pricing strategies include incentives.
Private Transit Routing Service Provider	Cities and Towns Transit Dispatch	user account setup	Planned	Billing information, vehicle information (or registration information), and requests for reports. Also includes subsequent account changes.
Private Transit Routing Service Provider	Cities and Towns Transit Vehicles	transit stop request	Planned	Notification that a transit stop has been requested by a transit user at a roadside stop. This flow identifies the route, stop, and the time of the request.
Private Transit Routing Service Provider	Local Dial-A-Ride Transit Dispatchers	actuate secure payment	Planned	Initiation of a payment action, ideally based on an encrypted token or biometric marker. Such a payment action could be a simple validation that the secure token allows the user access to the travel resource, or it could be the initiation of a payment transaction.
Private Transit Routing Service Provider	Local Dial-A-Ride Transit Dispatchers	authorization request	Planned	Request to determine if a transportation user is authorized to use a particular transportation resource.
Private Transit Routing Service Provider	Local Dial-A-Ride Transit Dispatchers	fare collection data	Planned	Fare collection information including the summary of fare system data and financial payment transaction data.
Private Transit Routing Service Provider	Local Dial-A-Ride Transit Dispatchers	transit traveler request	Planned	Request by a Transit traveler to summon assistance, request transit information, or request any other transit services.
Private Transit Routing Service Provider	Local Dial-A-Ride Transit Dispatchers	traveler payment information	Planned	Information provided for payment of road use charges, tolls or parking fees including identification that can be used to identify the payment account or source and related vehicle and service information that are used to determine the type and price of service requested. The information exchange normally supports an account debit to pay fees, but an account credit may be initiated where pricing strategies include incentives.
Private Transit Routing Service Provider	Local Dial-A-Ride Transit Dispatchers	user account setup	Planned	Billing information, vehicle information (or registration information), and requests for reports. Also includes subsequent account changes.
Private Transit Routing Service Provider	NAIPTA (dba Mountain Line) Paratransit	fare collection data	Planned	Fare collection information including the summary of fare system data and financial payment transaction data.
Private Transit Routing Service Provider	NAIPTA (dba Mountain Line) Paratransit	traveler payment information	Planned	Information provided for payment of road use charges, tolls or parking fees including identification that can be used to identify the payment account or source and related vehicle and service information that are used to determine the type and price of service requested. The information exchange normally supports an account debit to pay fees, but an account credit may be initiated where pricing strategies include incentives.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Private Transit Routing Service Provider	NAIPTA (dba Mountain Line) Paratransit	user account setup	Planned	Billing information, vehicle information (or registration information), and requests for reports. Also includes subsequent account changes.
Private Transit Routing Service Provider	NAIPTA (dba Mountain Line) Transit Management Center	actuate secure payment	Planned	Initiation of a payment action, ideally based on an encrypted token or biometric marker. Such a payment action could be a simple validation that the secure token allows the user access to the travel resource, or it could be the initiation of a payment transaction.
Private Transit Routing Service Provider	NAIPTA (dba Mountain Line) Transit Management Center	authorization request	Planned	Request to determine if a transportation user is authorized to use a particular transportation resource.
Private Transit Routing Service Provider	NAIPTA (dba Mountain Line) Transit Management Center	fare collection data	Planned	Fare collection information including the summary of fare system data and financial payment transaction data.
Private Transit Routing Service Provider	NAIPTA (dba Mountain Line) Transit Management Center	traveler payment information	Planned	Information provided for payment of road use charges, tolls or parking fees including identification that can be used to identify the payment account or source and related vehicle and service information that are used to determine the type and price of service requested. The information exchange normally supports an account debit to pay fees, but an account credit may be initiated where pricing strategies include incentives.
Private Transit Routing Service Provider	NAIPTA (dba Mountain Line) Transit Management Center	user account setup	Planned	Billing information, vehicle information (or registration information), and requests for reports. Also includes subsequent account changes.
Private Transit Routing Service Provider	NAIPTA (dba Mountain Line) Website and FLGRide	traveler request	Planned	A request for traveler information including traffic, transit, toll, parking, road weather conditions, event, and passenger rail information. The request identifies the type of information, the area of interest, parameters that are used to prioritize or filter the returned information, and sorting preferences.
Private Transit Routing Service Provider	NAIPTA (dba Mountain Line) Website and FLGRide	trip confirmation	Planned	Acknowledgement by the driver/traveler of acceptance of a trip plan with associated personal and payment information required to confirm reservations. Conversely, this flow may also reject the proposed trip plan. Confirmations include the selected route and subsequent trip confirmation messages will be issued for route changes.
Private Transit Routing Service Provider	NAIPTA (dba Mountain Line) Website and FLGRide	trip feedback	Planned	Information provided during or at the conclusion of a trip that supports performance monitoring and system optimization. Information provided may include a record of the trip including HOV/HOT lane usage and user provided feedback at the conclusion of the trip.
Private Transit Routing Service Provider	NAIPTA (dba Mountain Line) Website and FLGRide	trip request	Planned	Request for trip planning services that identifies the trip origin, destination(s), timing, preferences, and constraints. The request may also include the requestor's location or a request for transit and parking reservations, electric charging station access, and ridesharing options associated with the trip. The trip request also covers requests to revise a previously planned trip and interim updates that are provided as the trip is interactively planned.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Private Transit Routing Service Provider	NAIPTA (dba Mountain Line) Website and FLGRide	user profile	Planned	Information provided to register for a travel service and create a user account. The provided information includes personal identification, traveler preferences (e.g., travel mode, micro-mobility options, accessibility needs, and assistance needs), priorities for the preferences, device information, a user ID and password, and information to support payment transactions, if applicable.
Private Transit Routing Service Provider	Payment Administration Center	actuate secure payment	Planned	Initiation of a payment action, ideally based on an encrypted token or biometric marker. Such a payment action could be a simple validation that the secure token allows the user access to the travel resource, or it could be the initiation of a payment transaction.
Private Transit Routing Service Provider	Payment Administration Center	authorization request	Planned	Request to determine if a transportation user is authorized to use a particular transportation resource.
Private Transit Routing Service Provider	Payment Administration Center	payment device token information	Planned	Request for a digital token that can be associated with a credit card number.
Private Transit Routing Service Provider	Payment Administration Center	traveler payment information	Planned	Information provided for payment of road use charges, tolls or parking fees including identification that can be used to identify the payment account or source and related vehicle and service information that are used to determine the type and price of service requested. The information exchange normally supports an account debit to pay fees, but an account credit may be initiated where pricing strategies include incentives.
Private Transit Routing Service Provider	Payment Administration Center	user account setup	Planned	Billing information, vehicle information (or registration information), and requests for reports. Also includes subsequent account changes.
Private Transit Routing Service Provider	Transit Providers Dispatch (Public and Private)	actuate secure payment	Planned	Initiation of a payment action, ideally based on an encrypted token or biometric marker. Such a payment action could be a simple validation that the secure token allows the user access to the travel resource, or it could be the initiation of a payment transaction.
Private Transit Routing Service Provider	Transit Providers Dispatch (Public and Private)	authorization request	Planned	Request to determine if a transportation user is authorized to use a particular transportation resource.
Private Transit Routing Service Provider	Transit Providers Dispatch (Public and Private)	fare collection data	Planned	Fare collection information including the summary of fare system data and financial payment transaction data.
Private Transit Routing Service Provider	Transit Providers Dispatch (Public and Private)	transit information user request	Planned	Request for special transit routing, real-time schedule information, and availability information.
Private Transit Routing Service Provider	Transit Providers Dispatch (Public and Private)	transit traveler request	Planned	Request by a Transit traveler to summon assistance, request transit information, or request any other transit services.
Private Transit Routing Service Provider	Transit Providers Dispatch (Public and Private)	traveler payment information	Planned	Information provided for payment of road use charges, tolls or parking fees including identification that can be used to identify the payment account or source and related vehicle and service information that are used to determine the type and price of service requested. The information exchange normally supports an account debit to pay fees, but an account credit may be initiated where pricing strategies include incentives.
Private Transit Routing Service Provider	Transit Providers Dispatch (Public and Private)	user account setup	Planned	Billing information, vehicle information (or registration information), and requests for reports. Also includes subsequent account changes.
Private Transit Routing Service Provider	Traveler Card-Smartcard	payment device update	Planned	Information updated concerning traveler's personal data including name, address, user account information, trip records, and profile data.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Private Transit Routing Service Provider	Traveler Card-Smartcard	request for payment	Planned	Request to deduct cost of service from user's payment account.
Private Transit Routing Service Provider	Travelers	traveler interface updates	Planned	Visual or audio information (e.g., routes, messages, guidance, emergency information) that is provided to the traveler.
Private Transit Routing Service Provider	Tribal Transit Centers	actuate secure payment	Planned	Initiation of a payment action, ideally based on an encrypted token or biometric marker. Such a payment action could be a simple validation that the secure token allows the user access to the travel resource, or it could be the initiation of a payment transaction.
Private Transit Routing Service Provider	Tribal Transit Centers	authorization request	Planned	Request to determine if a transportation user is authorized to use a particular transportation resource.
Private Transit Routing Service Provider	Tribal Transit Centers	fare collection data	Planned	Fare collection information including the summary of fare system data and financial payment transaction data.
Private Transit Routing Service Provider	Tribal Transit Centers	traveler payment information	Planned	Information provided for payment of road use charges, tolls or parking fees including identification that can be used to identify the payment account or source and related vehicle and service information that are used to determine the type and price of service requested. The information exchange normally supports an account debit to pay fees, but an account credit may be initiated where pricing strategies include incentives.
Private Transit Routing Service Provider	Tribal Transit Centers	user account setup	Planned	Billing information, vehicle information (or registration information), and requests for reports. Also includes subsequent account changes.
Private Transit Routing Service Provider	YCAT Transit Passes	payment device update	Planned	Information updated concerning traveler's personal data including name, address, user account information, trip records, and profile data.
Private Transit Routing Service Provider	YCAT Transit Passes	request for payment	Planned	Request to deduct cost of service from user's payment account.
Private Transit Routing Service Provider	YCAT Website	emergency traveler information request	Planned	Request for alerts, evacuation information, and other emergency information provided to the traveling public.
Private Transit Routing Service Provider	YCAT Website	traveler request	Planned	A request for traveler information including traffic, transit, toll, parking, road weather conditions, event, and passenger rail information. The request identifies the type of information, the area of interest, parameters that are used to prioritize or filter the returned information, and sorting preferences.
Private Transit Routing Service Provider	YCAT Website	trip confirmation	Planned	Acknowledgement by the driver/traveler of acceptance of a trip plan with associated personal and payment information required to confirm reservations. Conversely, this flow may also reject the proposed trip plan. Confirmations include the selected route and subsequent trip confirmation messages will be issued for route changes.
Private Transit Routing Service Provider	YCAT Website	trip feedback	Planned	Information provided during or at the conclusion of a trip that supports performance monitoring and system optimization. Information provided may include a record of the trip including HOV/HOT lane usage and user provided feedback at the conclusion of the trip.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Private Transit Routing Service Provider	YCAT Website	trip request	Planned	Request for trip planning services that identifies the trip origin, destination(s), timing, preferences, and constraints. The request may also include the requestor's location or a request for transit and parking reservations, electric charging station access, and ridesharing options associated with the trip. The trip request also covers requests to revise a previously planned trip and interim updates that are provided as the trip is interactively planned.
Private Transit Routing Service Provider	YCAT Website	user profile	Planned	Information provided to register for a travel service and create a user account. The provided information includes personal identification, traveler preferences (e.g., travel mode, micro-mobility options, accessibility needs, and assistance needs), priorities for the preferences, device information, a user ID and password, and information to support payment transactions, if applicable.
Private Transit Routing Service Provider	Yuma County Area Transit (YCAT)	actuate secure payment	Planned	Initiation of a payment action, ideally based on an encrypted token or biometric marker. Such a payment action could be a simple validation that the secure token allows the user access to the travel resource, or it could be the initiation of a payment transaction.
Private Transit Routing Service Provider	Yuma County Area Transit (YCAT)	authorization request	Planned	Request to determine if a transportation user is authorized to use a particular transportation resource.
Private Transit Routing Service Provider	Yuma County Area Transit (YCAT)	fare collection data	Planned	Fare collection information including the summary of fare system data and financial payment transaction data.
Private Transit Routing Service Provider	Yuma County Area Transit (YCAT)	transit information user request	Planned	Request for special transit routing, real-time schedule information, and availability information.
Private Transit Routing Service Provider	Yuma County Area Transit (YCAT)	transit traveler request	Planned	Request by a Transit traveler to summon assistance, request transit information, or request any other transit services.
Private Transit Routing Service Provider	Yuma County Area Transit (YCAT)	traveler payment information	Planned	Information provided for payment of road use charges, tolls or parking fees including identification that can be used to identify the payment account or source and related vehicle and service information that are used to determine the type and price of service requested. The information exchange normally supports an account debit to pay fees, but an account credit may be initiated where pricing strategies include incentives.
Private Transit Routing Service Provider	Yuma County Area Transit (YCAT)	user account setup	Planned	Billing information, vehicle information (or registration information), and requests for reports. Also includes subsequent account changes.
Private Vehicle OBE	ADOT CV Roadside Equipment	vehicle location and motion for surveillance	Planned	Data describing the vehicle's location in three dimensions, heading, speed, acceleration, braking status, and size. This flow represents monitoring of basic safety data ('vehicle location and motion') broadcast by passing connected vehicles for use in vehicle detection and traffic monitoring applications.
Private Vehicle OBE	Basic Private Vehicle	vehicle control	Planned	Control commands issued to vehicle actuators that control steering, throttle, and braking and other related commands that support safe transition between manual and automated vehicle control. This flow can also deploy restraints and other safety systems when a collision is unavoidable.
Private Vehicle OBE	Electric Vehicle Charging Stations	actuate secure payment	Planned	Initiation of a payment action, ideally based on an encrypted token or biometric marker. Such a payment action could be a simple validation that the secure token allows the user access to the travel resource, or it could be the initiation of a payment transaction.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Private Vehicle OBE	Electric Vehicle Charging Stations	vehicle charging profile	Planned	Vehicle information provided to an electric charging station including the operational status of the electrical system, the charging capacity for the vehicle, and % charge complete.
Private Vehicle OBE	Public Private Traveler Information	emergency traveler information request	Planned	Request for alerts, evacuation information, and other emergency information provided to the traveling public.
Private Vehicle OBE	Public Private Traveler Information	evacuation assistance request	Planned	A request for evacuation assistance, which may be registered in advance or issued during an evacuation. It specifies the location, number of people that need to be evacuated, and any special needs/requirements.
Private Vehicle OBE	Public Private Traveler Information	shelter request	Planned	A request for shelter information, recommendations, or assignment/reservation. Information provided my include name, current location, number of people in the group, additional requirements (e.g., evacuating with pets, needed medical support).
Private Vehicle OBE	Public Private Traveler Information	traveler request	Planned	A request for traveler information including traffic, transit, toll, parking, road weather conditions, event, and passenger rail information. The request identifies the type of information, the area of interest, parameters that are used to prioritize or filter the returned information, and sorting preferences.
Private Vehicle OBE	Public Private Traveler Information	traveler sourced updates	Planned	Traveler posts on traffic and road conditions, parking availability, transit services, traveler services, shelter information, hazards, debris, obstacles, and other real-time crowd-sourced data that may be shared with other travelers.
Private Vehicle OBE	Wide Area Alerting Systems	emergency traveler information request	Planned	Request for alerts, evacuation information, and other emergency information provided to the traveling public.
Private Vehicle OBE	Wide Area Alerting Systems	evacuation assistance request	Planned	A request for evacuation assistance, which may be registered in advance or issued during an evacuation. It specifies the location, number of people that need to be evacuated, and any special needs/requirements.
Private Vehicle OBE	Wide Area Alerting Systems	shelter request	Planned	A request for shelter information, recommendations, or assignment/reservation. Information provided my include name, current location, number of people in the group, additional requirements (e.g., evacuating with pets, needed medical support).
Private Vehicle OBE	Wide Area Alerting Systems	traveler sourced updates	Planned	Traveler posts on traffic and road conditions, parking availability, transit services, traveler services, shelter information, hazards, debris, obstacles, and other real-time crowd-sourced data that may be shared with other travelers.
Public Private Traveler Information	ADOT 511 IVR	road network conditions	Existing	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.
Public Private Traveler Information	ADOT 511 Website	alternate mode information	Planned	Schedule information for alternate mode transportation providers such as air, ferry, and passenger-carrying heavy rail. This also includes details of incidents and other service disruptions that have occurred in the alternative mode. This also includes measures of service demand that supports assessment of their impact on the road network.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Public Private Traveler Information	ADOT 511 Website	emergency traveler information	Planned	Public notification of an emergency such as a natural or man-made disaster, civil emergency, or child abduction. This flow also includes evacuation information including evacuation instructions, evacuation zones, recommended evacuation times, tailored evacuation routes and destinations, traffic and road conditions along the evacuation routes, traveler services and shelter information, and reentry times and instructions.
Public Private Traveler Information	ADOT 511 Website	incident information for public	Planned	Report of current desensitized incident information prepared for public dissemination.
Public Private Traveler Information	ADOT 511 Website	parking information	Existing	General parking information and status, including current parking availability, parking pricing, and parking space availability information, including features like number and type of electric charging spots.
Public Private Traveler Information	ADOT 511 Website	road network conditions	Existing	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.
Public Private Traveler Information	ADOT 511 Website	traffic images	Planned	High fidelity, real-time traffic images suitable for surveillance monitoring by the operator or for use in machine vision applications. This flow includes the images. Meta data that describes the images is contained in another flow.
Public Private Traveler Information	ADOT 511 Website	transit service information	Planned	Transit service information including routes, schedules, and fare information as well as dynamic transit schedule adherence and transit vehicle location information.
Public Private Traveler Information	ADOT AZ 511 App	traveler information for media	Existing	General traveler information regarding incidents, unusual traffic conditions, transit issues, or other advisory information that has been desensitized and provided to the media.
Public Private Traveler Information	ADOT DEOC-Dept EM Ops Center	alert status	Planned	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
Public Private Traveler Information	ADOT ECD Dispatch	alert status	Planned	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
Public Private Traveler Information	ADOT TOC and EMC	alert status	Planned	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
Public Private Traveler Information	ADOT TOC and EMC	fare and price information	Planned	Current transit, parking, and toll fee schedule information.
Public Private Traveler Information	ATTP Tribal Coordination Website	emergency traveler information	Planned	Public notification of an emergency such as a natural or man-made disaster, civil emergency, or child abduction. This flow also includes evacuation information including evacuation instructions, evacuation zones, recommended evacuation times, tailored evacuation routes and destinations, traffic and road conditions along the evacuation routes, traveler services and shelter information, and reentry times and instructions.
Public Private Traveler Information	AZTech RADS Data Archive	fare and price information	Planned	Current transit, parking, and toll fee schedule information.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Public Private Traveler Information	AZTech Regional Info System (ARIS)	emergency traveler information	Existing	Public notification of an emergency such as a natural or man-made disaster, civil emergency, or child abduction. This flow also includes evacuation information including evacuation instructions, evacuation zones, recommended evacuation times, tailored evacuation routes and destinations, traffic and road conditions along the evacuation routes, traveler services and shelter information, and reentry times and instructions.
Public Private Traveler Information	CBP Website	emergency traveler information	Existing	Public notification of an emergency such as a natural or man-made disaster, civil emergency, or child abduction. This flow also includes evacuation information including evacuation instructions, evacuation zones, recommended evacuation times, tailored evacuation routes and destinations, traffic and road conditions along the evacuation routes, traveler services and shelter information, and reentry times and instructions.
Public Private Traveler Information	Cities and Towns Public Works	road network environmental situation data	Planned	Aggregated environmental situation data collected from vehicles and other sources for the road network. Aggregated information would include measured air temperature, exterior light status, wiper status, sun sensor status, rain sensor status, traction control status, ALB status, and other collected vehicle system status and sensor information for the region.
Public Private Traveler Information	Cities and Towns TIC and Website	emergency traveler information	Existing	Public notification of an emergency such as a natural or man-made disaster, civil emergency, or child abduction. This flow also includes evacuation information including evacuation instructions, evacuation zones, recommended evacuation times, tailored evacuation routes and destinations, traffic and road conditions along the evacuation routes, traveler services and shelter information, and reentry times and instructions.
Public Private Traveler Information	Cities and Towns TMC-TOC	fare and price information	Planned	Current transit, parking, and toll fee schedule information.
Public Private Traveler Information	Cities and Towns TMC-TOC	logged vehicle routes	Planned	Anticipated route information for guided vehicles, special vehicles (e.g., oversize vehicles) or groups of vehicles (e.g., governor's motorcade) that may require changes in traffic control strategy.
Public Private Traveler Information	Cities and Towns Transit Dispatch	demand responsive transit request	Planned	Request for paratransit support.
Public Private Traveler Information	Cities and Towns Transit Dispatch	transit fare request	Planned	Request for fare information and transit fare payment.
Public Private Traveler Information	Cities and Towns Transit Dispatch	transit trip request	Planned	Request for a transit trip plan that is responsive to traveler requirements such as schedule, cost, or duration.
Public Private Traveler Information	Cities and Towns Transit Dispatch	trip confirmation	Planned	Acknowledgement by the driver/traveler of acceptance of a trip plan with associated personal and payment information required to confirm reservations. Conversely, this flow may also reject the proposed trip plan. Confirmations include the selected route and subsequent trip confirmation messages will be issued for route changes.
Public Private Traveler Information	County Mobile App	traveler information for media	Planned	General traveler information regarding incidents, unusual traffic conditions, transit issues, or other advisory information that has been desensitized and provided to the media.
Public Private Traveler Information	County TMC-TOC	fare and price information	Planned	Current transit, parking, and toll fee schedule information.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Public Private Traveler Information	County TMC-TOC	logged vehicle routes	Planned	Anticipated route information for guided vehicles, special vehicles (e.g., oversize vehicles) or groups of vehicles (e.g., governor's motorcade) that may require changes in traffic control strategy.
Public Private Traveler Information	DPS Central Communications Center	alert status	Planned	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
Public Private Traveler Information	Fleet Management Systems	incident information for public	Planned	Report of current desensitized incident information prepared for public dissemination.
Public Private Traveler Information	Fleet Management Systems	road network conditions	Planned	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.
Public Private Traveler Information	Local Dial-A-Ride Transit Dispatchers	demand responsive transit request	Planned	Request for paratransit support.
Public Private Traveler Information	Local Dial-A-Ride Transit Dispatchers	transit fare request	Planned	Request for fare information and transit fare payment.
Public Private Traveler Information	Local Dial-A-Ride Transit Dispatchers	transit trip request	Planned	Request for a transit trip plan that is responsive to traveler requirements such as schedule, cost, or duration.
Public Private Traveler Information	Local Dial-A-Ride Transit Dispatchers	trip confirmation	Planned	Acknowledgement by the driver/traveler of acceptance of a trip plan with associated personal and payment information required to confirm reservations. Conversely, this flow may also reject the proposed trip plan. Confirmations include the selected route and subsequent trip confirmation messages will be issued for route changes.
Public Private Traveler Information	Maricopa County EOC	alert status	Planned	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
Public Private Traveler Information	Mexico Customs and Border Patrol	alert status	Planned	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
Public Private Traveler Information	Mexico Public Safety	alert status	Planned	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
Public Private Traveler Information	MPO-COG Planning Traffic Database	traveler archive data	Planned	Data associated with traveler information services including service requests, facility usage, rideshare, routing, and traveler payment transaction data. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
Public Private Traveler Information	NAIPTA (dba Mountain Line) Bus Arrival System	broadcast traveler information	Planned	General traveler information that contains traffic and road conditions, link travel times, incidents, advisories, restrictions, vehicle requirements, work zones, transit service information, weather information, parking information, and other related traveler information.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Public Private Traveler Information	NAIPTA (dba Mountain Line) Bus Arrival System	interactive traveler information	Planned	Traveler information provided in response to a traveler request. The provided information includes traffic and road conditions, advisories, incidents, restrictions, payment information, transit services, parking information, weather information, and other travel-related data updates and confirmations.
Public Private Traveler Information	NAIPTA (dba Mountain Line) Bus Arrival System	trip plan	Planned	A travel itinerary covering single or multimodal travel. The itinerary identifies a route and associated traveler information and instructions identifying recommended trip modes (including indoor and outdoor wayfinding) and transfer information, ride sharing options, and transit and parking reservation information. This flow also includes intermediate information that is provided as the trip plan is interactively created, including identification of alternatives, requests for additional information as well as amenities along the trip.
Public Private Traveler Information	NAIPTA (dba Mountain Line) Transit Data Archive	traveler archive data	Planned	Data associated with traveler information services including service requests, facility usage, rideshare, routing, and traveler payment transaction data. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
Public Private Traveler Information	NAIPTA (dba Mountain Line) Website and FLGRide	emergency traveler information	Planned	Public notification of an emergency such as a natural or man-made disaster, civil emergency, or child abduction. This flow also includes evacuation information including evacuation instructions, evacuation zones, recommended evacuation times, tailored evacuation routes and destinations, traffic and road conditions along the evacuation routes, traveler services and shelter information, and reentry times and instructions.
Public Private Traveler Information	NAIPTA (dba Mountain Line) Website and FLGRide	transit service information	Planned	Transit service information including routes, schedules, and fare information as well as dynamic transit schedule adherence and transit vehicle location information.
Public Private Traveler Information	Nevada State Police Dispatch	alert status	Planned	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
Public Private Traveler Information	New Mexico State Police Dispatch	alert status	Planned	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
Public Private Traveler Information	Payment Administration Center	account updates	Planned	Updates to an account, such as purchases, uses, cancellation, secureID changes or similar material changes to account information.
Public Private Traveler Information	Payment Administration Center	smart card reconciliation	Planned	Detailed list of charges of the form charge/transport provider, taken from a smart card that need to be applied to the listed providers.
Public Private Traveler Information	Personal Information Devices for Travelers	broadcast traveler information	Planned	General traveler information that contains traffic and road conditions, link travel times, incidents, advisories, restrictions, vehicle requirements, work zones, transit service information, weather information, parking information, and other related traveler information.
Public Private Traveler Information	Personal Information Devices for Travelers	emergency traveler information	Planned	Public notification of an emergency such as a natural or man-made disaster, civil emergency, or child abduction. This flow also includes evacuation information including evacuation instructions, evacuation zones, recommended evacuation times, tailored evacuation routes and destinations, traffic and road conditions along the evacuation routes, traveler services and shelter information, and reentry times and instructions.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Public Private Traveler Information	Personal Information Devices for Travelers	evacuation assistance information	Existing	Information on evacuation resources including self-evacuation options, anticipated pickup time and location if a transportation asset is to be deployed, destination shelter, and supporting information on what to bring, estimated reentry date/time.
Public Private Traveler Information	Personal Information Devices for Travelers	interactive traveler information	Planned	Traveler information provided in response to a traveler request. The provided information includes traffic and road conditions, advisories, incidents, restrictions, payment information, transit services, parking information, weather information, and other travel-related data updates and confirmations.
Public Private Traveler Information	Personal Information Devices for Travelers	shelter recommendations	Existing	Recommendation identifying the shelter or shelters best suited to the requestor. Hotels/motels may also be included as potential sheltering options. This flow may also include shelter assignments/reservations.
Public Private Traveler Information	Personal Information Devices for Travelers	traveler alerts	Planned	Traveler information alerts reporting congestion, incidents, adverse road or weather conditions, restrictions, vehicle requirements, parking availability, transit service delays or interruptions, and other information that may impact the traveler. Relevant alerts are provided based on traveler-supplied profile information including trip characteristics and preferences.
Public Private Traveler Information	Personal Information Devices for Travelers	trip plan	Planned	A travel itinerary covering single or multimodal travel. The itinerary identifies a route and associated traveler information and instructions identifying recommended trip modes (including indoor and outdoor wayfinding) and transfer information, ride sharing options, and transit and parking reservation information. This flow also includes intermediate information that is provided as the trip plan is interactively created, including identification of alternatives, requests for additional information as well as amenities along the trip.
Public Private Traveler Information	POE Roadway Inspection Systems	emergency traveler information	Planned	Public notification of an emergency such as a natural or man-made disaster, civil emergency, or child abduction. This flow also includes evacuation information including evacuation instructions, evacuation zones, recommended evacuation times, tailored evacuation routes and destinations, traffic and road conditions along the evacuation routes, traveler services and shelter information, and reentry times and instructions.
Public Private Traveler Information	Private Vehicle OBE	emergency traveler information	Planned	Public notification of an emergency such as a natural or man-made disaster, civil emergency, or child abduction. This flow also includes evacuation information including evacuation instructions, evacuation zones, recommended evacuation times, tailored evacuation routes and destinations, traffic and road conditions along the evacuation routes, traveler services and shelter information, and reentry times and instructions.
Public Private Traveler Information	Private Vehicle OBE	evacuation assistance information	Planned	Information on evacuation resources including self-evacuation options, anticipated pickup time and location if a transportation asset is to be deployed, destination shelter, and supporting information on what to bring, estimated reentry date/time.
Public Private Traveler Information	Private Vehicle OBE	interactive traveler information	Planned	Traveler information provided in response to a traveler request. The provided information includes traffic and road conditions, advisories, incidents, restrictions, payment information, transit services, parking information, weather information, and other travel-related data updates and confirmations.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Public Private Traveler Information	Private Vehicle OBE	shelter recommendations	Planned	Recommendation identifying the shelter or shelters best suited to the requestor. Hotels/motels may also be included as potential sheltering options. This flow may also include shelter assignments/reservations.
Public Private Traveler Information	Transit Providers Dispatch (Public and Private)	transit fare request	Planned	Request for fare information and transit fare payment.
Public Private Traveler Information	Transit Providers Dispatch (Public and Private)	trip confirmation	Planned	Acknowledgement by the driver/traveler of acceptance of a trip plan with associated personal and payment information required to confirm reservations. Conversely, this flow may also reject the proposed trip plan. Confirmations include the selected route and subsequent trip confirmation messages will be issued for route changes.
Public Private Traveler Information	Tribal Public Safety Dispatch	alert status	Planned	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
Public Private Traveler Information	Tribal TMC-TOC-TIC	emergency traveler information	Planned	Public notification of an emergency such as a natural or man-made disaster, civil emergency, or child abduction. This flow also includes evacuation information including evacuation instructions, evacuation zones, recommended evacuation times, tailored evacuation routes and destinations, traffic and road conditions along the evacuation routes, traveler services and shelter information, and reentry times and instructions.
Public Private Traveler Information	Tribal Transit Centers	demand responsive transit request	Planned	Request for paratransit support.
Public Private Traveler Information	Tribal Transit Centers	transit fare request	Planned	Request for fare information and transit fare payment.
Public Private Traveler Information	Tribal Transit Centers	transit trip request	Planned	Request for a transit trip plan that is responsive to traveler requirements such as schedule, cost, or duration.
Public Private Traveler Information	Tribal Transit Centers	trip confirmation	Planned	Acknowledgement by the driver/traveler of acceptance of a trip plan with associated personal and payment information required to confirm reservations. Conversely, this flow may also reject the proposed trip plan. Confirmations include the selected route and subsequent trip confirmation messages will be issued for route changes.
Public Private Traveler Information	Utah State Police Dispatch	alert status	Planned	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
Public Private Traveler Information	Wide Area Alerting Systems	emergency traveler information	Planned	Public notification of an emergency such as a natural or man-made disaster, civil emergency, or child abduction. This flow also includes evacuation information including evacuation instructions, evacuation zones, recommended evacuation times, tailored evacuation routes and destinations, traffic and road conditions along the evacuation routes, traveler services and shelter information, and reentry times and instructions.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Public Private Traveler Information	YCAT Website	emergency traveler information	Planned	Public notification of an emergency such as a natural or man-made disaster, civil emergency, or child abduction. This flow also includes evacuation information including evacuation instructions, evacuation zones, recommended evacuation times, tailored evacuation routes and destinations, traffic and road conditions along the evacuation routes, traveler services and shelter information, and reentry times and instructions.
Public Private Traveler Information	YCAT Website	transit service information	Planned	Transit service information including routes, schedules, and fare information as well as dynamic transit schedule adherence and transit vehicle location information.
Public Private Traveler Information	Yuma County Area Transit (YCAT)	demand responsive transit request	Existing	Request for paratransit support.
Public Private Traveler Information	Yuma County Area Transit (YCAT)	transit fare request	Planned	Request for fare information and transit fare payment.
Public Private Traveler Information	Yuma County Area Transit (YCAT)	transit trip request	Planned	Request for a transit trip plan that is responsive to traveler requirements such as schedule, cost, or duration.
Public Private Traveler Information	Yuma County Area Transit (YCAT)	trip confirmation	Existing	Acknowledgement by the driver/traveler of acceptance of a trip plan with associated personal and payment information required to confirm reservations. Conversely, this flow may also reject the proposed trip plan. Confirmations include the selected route and subsequent trip confirmation messages will be issued for route changes.
Rail Grade Wayside Warning Systems	ADOT ITS Field Equipment	track status	Existing	Current status of the wayside equipment and notification of an arriving train.
Rail Grade Wayside Warning Systems	ADOT Roadside Comm Equipment	barrier system coordination	Existing	The direct flow of information between field equipment. This includes information used to configure and control barrier systems that are represented by gates, barriers and other automated or remotely controlled systems used to manage entry to roadways. Current operating status of barrier systems is also shared including operating condition and current operational state.
Rail Grade Wayside Warning Systems	ADOT Roadside Comm Equipment	dynamic sign coordination	Existing	The direct flow of information between field equipment. This includes information used to initialize, configure, and control dynamic message signs. This flow can provide message content and delivery attributes, local message store maintenance requests, control mode commands, status queries, and all other commands and associated parameters that support local management of these devices. Current operating status of dynamic message signs is returned.
Rail Grade Wayside Warning Systems	ADOT Roadside Comm Equipment	environmental sensor coordination	Existing	The direct flow of information between field equipment. This includes configuration and control of environmental sensors and the current road conditions (e.g., surface temperature, subsurface temperature, moisture, icing, treatment status) and surface weather conditions (e.g., air temperature, wind speed, precipitation, visibility) as measured and reported by fixed and/or mobile environmental sensors. Operational status of the sensors is also included.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Rail Grade Wayside Warning Systems	ADOT Roadside Comm Equipment	lane management coordination	Existing	The direct flow of information between field equipment. This includes information used to configure and control dynamic lane management systems and the status of managed lanes including current operational state, violations, and logged information. This also includes lane usage information including both traditional traffic flow measures and special information associated with managed lanes such as measured passenger occupancies. It also includes the operational status of the lane management equipment.
Rail Grade Wayside Warning Systems	ADOT Roadside Comm Equipment	local priority request coordination	Existing	The direct flow of information between field equipment. This includes notification of crossing calls from pedestrians and other vulnerable road users and requests for signal prioritization or preemption, and any other request for right-of-way at an intersection. The status of the priority request is also shared. For vulnerable road users, this includes information provided to guide and warn vulnerable road users at crossings including crossing permission status and crossing time remaining.
Rail Grade Wayside Warning Systems	ADOT Roadside Comm Equipment	passive vehicle monitoring coordination	Planned	The direct flow of information between field equipment. This includes control commands used to control detection systems that rely on infrastructure-based identification of individual vehicles to measure travel times and other related measures by identifying the same vehicle at different points in the network. Related technologies include Bluetooth readers and license plate recognition systems. The coordination also includes sharing of time stamped identifiers that identify the vehicles that have passed through a detection zone.
Rail Grade Wayside Warning Systems	ADOT Roadside Comm Equipment	rail crossing operational status	Existing	Status of the highway-rail grade crossing equipment including both the current state or mode of operation and the current equipment condition.
Rail Grade Wayside Warning Systems	ADOT Roadside Comm Equipment	reversible lane coordination	Planned	The direct flow of information between field equipment. This includes control of automated reversible lane configuration and driver information systems and current reversible lane status including the operational status and mode of the reversible lane control equipment.
Rail Grade Wayside Warning Systems	ADOT Roadside Comm Equipment	roadway treatment coordination	Existing	The direct flow of information between field equipment. This includes control data for remotely located, automated devices, that treat the road surface (e.g., de-icing applications) and the current operational status of automated roadway treatment devices.
Rail Grade Wayside Warning Systems	ADOT Roadside Comm Equipment	roadway warning coordination	Existing	The direct flow of information between field equipment. This includes information used to configure and control roadway warning systems and the current operating status of roadway warning systems.
Rail Grade Wayside Warning Systems	ADOT Roadside Comm Equipment	signal control coordination	Existing	The direct flow of information between field equipment. This includes configuration and control of traffic signal controllers or field masters. Configuration data and operational status of traffic signal control equipment including operating condition and current indications are returned.
Rail Grade Wayside Warning Systems	ADOT Roadside Comm Equipment	track status	Existing	Current status of the wayside equipment and notification of an arriving train.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Rail Grade Wayside Warning Systems	ADOT Roadside Comm Equipment	traffic detector coordination	Existing	The direct flow of information between field equipment. This includes information used to configure and control traffic detector systems such as inductive loop detectors and machine vision sensors Raw and/or processed traffic detector data is returned that allows derivation of traffic flow variables (e.g., speed, volume, and density measures) and associated information (e.g., congestion, potential incidents). This flow includes the traffic data and the operational status of the traffic detectors
Rail Grade Wayside Warning Systems	ADOT Roadside Comm Equipment	traffic metering coordination	Existing	The direct flow of information between field equipment. This includes control commands and operating parameters for ramp meters, interchange meters, mainline meters, and other systems equipment associated with roadway metering operations. Current operational status of the traffic metering status is also provided.
Rail Grade Wayside Warning Systems	ADOT Roadside Comm Equipment	variable speed limit coordination	Existing	The direct flow of information between field equipment. This includes information used to configure, control, and monitor variable speed limit systems including the equipment used to provide current speed limits and other information to drivers.
Rail Grade Wayside Warning Systems	ADOT Roadside Comm Equipment	video surveillance coordination	Existing	The direct flow of information between field equipment. This includes information used to configure and control video surveillance systems and the high fidelity, real-time traffic images and associated meta data that are returned.
Rail Grade Wayside Warning Systems	Cities and Towns TMC-TOC	rail crossing status	Planned	Status of the highway-rail intersection equipment including both the current state or mode of operation and the current equipment condition.
Rail Grade Wayside Warning Systems	Cities and Towns Train Wayside Alert	rail crossing operational status	Planned	Status of the highway-rail grade crossing equipment including both the current state or mode of operation and the current equipment condition.
Rail Grade Wayside Warning Systems	County ITS Field Equipment	track status	Planned	Current status of the wayside equipment and notification of an arriving train.
Rail Grade Wayside Warning Systems	Tribal ITS Field Equipment	track status	Planned	Current status of the wayside equipment and notification of an arriving train.
Railroad Operations Center	ADOT DEOC-Dept EM Ops Center	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Railroad Operations Center	ADOT DEOC-Dept EM Ops Center	rail incident response status	Planned	Status of the rail system's response to current incidents.
Railroad Operations Center	ADOT HazMat Response Team	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Railroad Operations Center	ADOT Rapid Notification System	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Railroad Operations Center	ADOT TOC and EMC	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Railroad Operations Center	Cities and Towns EOC-EMC	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Railroad Operations Center	Cities and Towns Police and Fire Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Railroad Operations Center	County EMC-EOC	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Railroad Operations Center	County Sheriff Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Railroad Operations Center	DEMA SEOC Arizona DEM Military Affairs	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Railroad Operations Center	DPS Central Communications Center	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Railroad Operations Center	DPS HazMat Team	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Railroad Operations Center	Maricopa County EOC	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Railroad Operations Center	Tribal Public Safety Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Railroad Operations Center	US Border Patrol Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Safety Fitness Electronic Record (SAFER)	ADOT ECD CVO Administration Center	credentials information	Existing	Response containing full vehicle fuel tax and registration credentials information. "Response" may be provided in reaction to a real-time query or a standing request for updated information. The query flow is not explicitly shown.
Safety Fitness Electronic Record (SAFER)	ADOT ECD CVO Administration Center	credentials status information	Existing	Credentials information such as registration, licensing, insurance, check flags, and electronic screening enrollment data. A unique identifier is included. Corresponds to the credentials portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
Safety Fitness Electronic Record (SAFER)	ADOT ECD CVO Administration Center	safety status information	Existing	Safety information such as safety ratings, security ratings or flags, inspection summaries, and violation summaries. A unique identifier is included. Corresponds to the safety and security portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
Safety Fitness Electronic Record (SAFER)	ADOT ECD CVO Administration Center	targeted list	Existing	List of carriers, drivers, and/or vehicles of interest for enforcement purposes.
Safety Fitness Electronic Record (SAFER)	ADOT ECD Dispatch	credentials information	Planned	Response containing full vehicle fuel tax and registration credentials information. "Response" may be provided in reaction to a real-time query or a standing request for updated information. The query flow is not explicitly shown.
Safety Fitness Electronic Record (SAFER)	ADOT Electronic Bypass Stations	commercial vehicle permit information	Existing	Information for commercial vehicle permits for oversize, overweight, or for dangerous goods. The query flow is not explicitly shown.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Safety Fitness Electronic Record (SAFER)	ADOT Electronic Bypass Stations	credentials information	Planned	Response containing full vehicle fuel tax and registration credentials information. "Response" may be provided in reaction to a real-time query or a standing request for updated information. The query flow is not explicitly shown.
Safety Fitness Electronic Record (SAFER)	ADOT Electronic Bypass Stations	credentials status information	Planned	Credentials information such as registration, licensing, insurance, check flags, and electronic screening enrollment data. A unique identifier is included. Corresponds to the credentials portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
Safety Fitness Electronic Record (SAFER)	ADOT Electronic Bypass Stations	cv driver record	Planned	Information typically maintained by a state driver licensing agency about a driver of a commercial vehicle including driver identification data, license data, permit data, and driving history details. The query flow is not explicitly shown.
Safety Fitness Electronic Record (SAFER)	ADOT Electronic Bypass Stations	information on violators	Existing	Information on violators provided by a law enforcement agency. May include information about commercial vehicle violations or other kinds of violations associated with the particular entity. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
Safety Fitness Electronic Record (SAFER)	ADOT Electronic Bypass Stations	safety status information	Planned	Safety information such as safety ratings, security ratings or flags, inspection summaries, and violation summaries. A unique identifier is included. Corresponds to the safety and security portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
Safety Fitness Electronic Record (SAFER)	ADOT Electronic Bypass Stations	targeted list	Planned	List of carriers, drivers, and/or vehicles of interest for enforcement purposes.
Safety Fitness Electronic Record (SAFER)	ADOT Motor Vehicle Division (MVD) Database	commercial vehicle archive data	Planned	Information describing commercial vehicle travel and commodity flow characteristics. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
Safety Fitness Electronic Record (SAFER)	ADOT MVD Commercial Vehicle Administration	border clearance status	Planned	Notification regarding the crossing status of commercial freight shipment scheduled to enter the U.S. Includes portions of border agency and transportation agency clearance results, as those results become available.
Safety Fitness Electronic Record (SAFER)	ADOT MVD Commercial Vehicle Administration	commercial vehicle permit information	Planned	Information for commercial vehicle permits for oversize, overweight, or for dangerous goods. The query flow is not explicitly shown.
Safety Fitness Electronic Record (SAFER)	ADOT MVD Commercial Vehicle Administration	credentials information	Existing	Response containing full vehicle fuel tax and registration credentials information. "Response" may be provided in reaction to a real-time query or a standing request for updated information. The query flow is not explicitly shown.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Safety Fitness Electronic Record (SAFER)	ADOT MVD Commercial Vehicle Administration	credentials status information	Existing	Credentials information such as registration, licensing, insurance, check flags, and electronic screening enrollment data. A unique identifier is included. Corresponds to the credentials portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
Safety Fitness Electronic Record (SAFER)	ADOT MVD Commercial Vehicle Administration	safety inspection report	Existing	Report containing results of commercial vehicle safety inspection. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
Safety Fitness Electronic Record (SAFER)	ADOT MVD Commercial Vehicle Administration	safety status information	Existing	Safety information such as safety ratings, security ratings or flags, inspection summaries, and violation summaries. A unique identifier is included. Corresponds to the safety and security portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
Safety Fitness Electronic Record (SAFER)	ADOT MVD Commercial Vehicle Administration	targeted list	Existing	List of carriers, drivers, and/or vehicles of interest for enforcement purposes.
Safety Fitness Electronic Record (SAFER)	ADOT MVD Commercial Vehicle Administration	trigger area definition	Planned	Information that defines the desired trigger area for wireless roadside inspection safety data message submission.
Safety Fitness Electronic Record (SAFER)	ADOT MVD Commercial Vehicle Administration	trigger control	Planned	Controls to enable or disable a particular trigger.
Safety Fitness Electronic Record (SAFER)	ADOT WIM Stations	commercial vehicle permit information	Existing	Information for commercial vehicle permits for oversize, overweight, or for dangerous goods. The query flow is not explicitly shown.
Safety Fitness Electronic Record (SAFER)	ADOT WIM Stations	credentials information	Existing	Response containing full vehicle fuel tax and registration credentials information. "Response" may be provided in reaction to a real-time query or a standing request for updated information. The query flow is not explicitly shown.
Safety Fitness Electronic Record (SAFER)	ADOT WIM Stations	credentials status information	Existing	Credentials information such as registration, licensing, insurance, check flags, and electronic screening enrollment data. A unique identifier is included. Corresponds to the credentials portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
Safety Fitness Electronic Record (SAFER)	ADOT WIM Stations	cv driver record	Existing	Information typically maintained by a state driver licensing agency about a driver of a commercial vehicle including driver identification data, license data, permit data, and driving history details. The query flow is not explicitly shown.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Safety Fitness Electronic Record (SAFER)	ADOT WIM Stations	information on violators	Existing	Information on violators provided by a law enforcement agency. May include information about commercial vehicle violations or other kinds of violations associated with the particular entity. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
Safety Fitness Electronic Record (SAFER)	ADOT WIM Stations	safety status information	Existing	Safety information such as safety ratings, security ratings or flags, inspection summaries, and violation summaries. A unique identifier is included. Corresponds to the safety and security portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
Safety Fitness Electronic Record (SAFER)	ADOT WIM Stations	targeted list	Existing	List of carriers, drivers, and/or vehicles of interest for enforcement purposes.
Safety Fitness Electronic Record (SAFER)	Commercial Vehicle Driver and Vehicle Verification Systems	border clearance status	Existing	Notification regarding the crossing status of commercial freight shipment scheduled to enter the U.S. Includes portions of border agency and transportation agency clearance results, as those results become available.
Safety Fitness Electronic Record (SAFER)	Commercial Vehicle Driver and Vehicle Verification Systems	commercial vehicle archive data	Existing	Information describing commercial vehicle travel and commodity flow characteristics. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
Safety Fitness Electronic Record (SAFER)	Commercial Vehicle Driver and Vehicle Verification Systems	commercial vehicle permit information	Planned	Information for commercial vehicle permits for oversize, overweight, or for dangerous goods. The query flow is not explicitly shown.
Safety Fitness Electronic Record (SAFER)	Commercial Vehicle Driver and Vehicle Verification Systems	credentials information	Existing	Response containing full vehicle fuel tax and registration credentials information. "Response" may be provided in reaction to a real-time query or a standing request for updated information. The query flow is not explicitly shown.
Safety Fitness Electronic Record (SAFER)	Commercial Vehicle Driver and Vehicle Verification Systems	credentials status information	Existing	Credentials information such as registration, licensing, insurance, check flags, and electronic screening enrollment data. A unique identifier is included. Corresponds to the credentials portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
Safety Fitness Electronic Record (SAFER)	Commercial Vehicle Driver and Vehicle Verification Systems	safety inspection report	Existing	Report containing results of commercial vehicle safety inspection. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Safety Fitness Electronic Record (SAFER)	Commercial Vehicle Driver and Vehicle Verification Systems	safety status information	Existing	Safety information such as safety ratings, security ratings or flags, inspection summaries, and violation summaries. A unique identifier is included. Corresponds to the safety and security portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
Safety Fitness Electronic Record (SAFER)	Commercial Vehicle Driver and Vehicle Verification Systems	targeted list	Existing	List of carriers, drivers, and/or vehicles of interest for enforcement purposes.
Safety Fitness Electronic Record (SAFER)	Commercial Vehicle Driver and Vehicle Verification Systems	trigger area definition	Planned	Information that defines the desired trigger area for wireless roadside inspection safety data message submission.
Safety Fitness Electronic Record (SAFER)	Commercial Vehicle Driver and Vehicle Verification Systems	trigger control	Planned	Controls to enable or disable a particular trigger.
Safety Fitness Electronic Record (SAFER)	Commercial Vehicles	safety inspection record	Planned	Record containing results of commercial vehicle safety inspection.
Safety Fitness Electronic Record (SAFER)	DEMA Enforcement	accident report	Existing	Report of commercial vehicle safety accident. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
Safety Fitness Electronic Record (SAFER)	DEMA Enforcement	citation	Existing	Report of commercial vehicle citation. The citation includes references to the statute(s) that was (were) violated. It includes information on the violator and the officer issuing the citation. A citation differs from a violation because it is adjudicated by the courts. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
Safety Fitness Electronic Record (SAFER)	DEMA Enforcement	commercial vehicle permit information	Existing	Information for commercial vehicle permits for oversize, overweight, or for dangerous goods. The query flow is not explicitly shown.
Safety Fitness Electronic Record (SAFER)	DEMA Enforcement	commercial vehicle violation notification	Existing	Notification of a violation. The violation notification flow describes the statute or regulation that was violated and how it was violated (e. g., overweight on specific axle by xxx pounds or which brake was out of adjustment and how far out of adjustment it was). A violation differs from a citation because it is not adjudicated by the courts. It specifically includes the date/time and location of the violation and identification of the vehicle, driver, and associated equipment/cargo.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Safety Fitness Electronic Record (SAFER)	DEMA Enforcement	credentials status information	Existing	Credentials information such as registration, licensing, insurance, check flags, and electronic screening enrollment data. A unique identifier is included. Corresponds to the credentials portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
Safety Fitness Electronic Record (SAFER)	DEMA Enforcement	daily site activity data	Existing	Record of daily activities at commercial vehicle check stations including summaries of screening events and inspections.
Safety Fitness Electronic Record (SAFER)	DEMA Enforcement	safety inspection report	Existing	Report containing results of commercial vehicle safety inspection. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
Safety Fitness Electronic Record (SAFER)	DEMA Enforcement	safety status information	Existing	Safety information such as safety ratings, security ratings or flags, inspection summaries, and violation summaries. A unique identifier is included. Corresponds to the safety and security portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
Safety Fitness Electronic Record (SAFER)	DPS Commercial Vehicle Enforcement	accident report	Existing	Report of commercial vehicle safety accident. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
Safety Fitness Electronic Record (SAFER)	DPS Commercial Vehicle Enforcement	citation	Existing	Report of commercial vehicle citation. The citation includes references to the statute(s) that was (were) violated. It includes information on the violator and the officer issuing the citation. A citation differs from a violation because it is adjudicated by the courts. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
Safety Fitness Electronic Record (SAFER)	DPS Commercial Vehicle Enforcement	commercial vehicle permit information	Existing	Information for commercial vehicle permits for oversize, overweight, or for dangerous goods. The query flow is not explicitly shown.
Safety Fitness Electronic Record (SAFER)	DPS Commercial Vehicle Enforcement	commercial vehicle violation notification	Existing	Notification of a violation. The violation notification flow describes the statute or regulation that was violated and how it was violated (e. g., overweight on specific axle by xxx pounds or which brake was out of adjustment and how far out of adjustment it was). A violation differs from a citation because it is not adjudicated by the courts. It specifically includes the date/time and location of the violation and identification of the vehicle, driver, and associated equipment/cargo.
Safety Fitness Electronic Record (SAFER)	DPS Commercial Vehicle Enforcement	credentials information	Existing	Response containing full vehicle fuel tax and registration credentials information. "Response" may be provided in reaction to a real-time query or a standing request for updated information. The query flow is not explicitly shown.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Safety Fitness Electronic Record (SAFER)	DPS Commercial Vehicle Enforcement	credentials status information	Existing	Credentials information such as registration, licensing, insurance, check flags, and electronic screening enrollment data. A unique identifier is included. Corresponds to the credentials portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
Safety Fitness Electronic Record (SAFER)	DPS Commercial Vehicle Enforcement	daily site activity data	Existing	Record of daily activities at commercial vehicle check stations including summaries of screening events and inspections.
Safety Fitness Electronic Record (SAFER)	DPS Commercial Vehicle Enforcement	safety inspection report	Existing	Report containing results of commercial vehicle safety inspection. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
Safety Fitness Electronic Record (SAFER)	DPS Commercial Vehicle Enforcement	safety status information	Existing	Safety information such as safety ratings, security ratings or flags, inspection summaries, and violation summaries. A unique identifier is included. Corresponds to the safety and security portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
Safety Fitness Electronic Record (SAFER)	DPS Commercial Vehicle Enforcement	targeted list	Existing	List of carriers, drivers, and/or vehicles of interest for enforcement purposes.
Safety Fitness Electronic Record (SAFER)	DPS Commercial Vehicle Enforcement	trigger area definition	Planned	Information that defines the desired trigger area for wireless roadside inspection safety data message submission.
Safety Fitness Electronic Record (SAFER)	DPS Commercial Vehicle Enforcement	trigger control	Planned	Controls to enable or disable a particular trigger.
Safety Fitness Electronic Record (SAFER)	DPS Data Archive	commercial vehicle archive data	Existing	Information describing commercial vehicle travel and commodity flow characteristics. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
Safety Fitness Electronic Record (SAFER)	DPS Roadside Safety Inspection	accident report	Existing	Report of commercial vehicle safety accident. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
Safety Fitness Electronic Record (SAFER)	DPS Roadside Safety Inspection	carrier participation report	Existing	Report that summarizes motor carrier participation in CVO programs. Used to identify the level of active participation and to report which enrolled carriers are not participating as expected.
Safety Fitness Electronic Record (SAFER)	DPS Roadside Safety Inspection	citation	Existing	Report of commercial vehicle citation. The citation includes references to the statute(s) that was (were) violated. It includes information on the violator and the officer issuing the citation. A citation differs from a violation because it is adjudicated by the courts. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Safety Fitness Electronic Record (SAFER)	DPS Roadside Safety Inspection	commercial vehicle permit information	Existing	Information for commercial vehicle permits for oversize, overweight, or for dangerous goods. The query flow is not explicitly shown.
Safety Fitness Electronic Record (SAFER)	DPS Roadside Safety Inspection	commercial vehicle violation notification	Existing	Notification of a violation. The violation notification flow describes the statute or regulation that was violated and how it was violated (e. g., overweight on specific axle by xxx pounds or which brake was out of adjustment and how far out of adjustment it was). A violation differs from a citation because it is not adjudicated by the courts. It specifically includes the date/time and location of the violation and identification of the vehicle, driver, and associated equipment/cargo.
Safety Fitness Electronic Record (SAFER)	DPS Roadside Safety Inspection	credentials information	Existing	Response containing full vehicle fuel tax and registration credentials information. "Response" may be provided in reaction to a real-time query or a standing request for updated information. The query flow is not explicitly shown.
Safety Fitness Electronic Record (SAFER)	DPS Roadside Safety Inspection	credentials status information	Existing	Credentials information such as registration, licensing, insurance, check flags, and electronic screening enrollment data. A unique identifier is included. Corresponds to the credentials portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
Safety Fitness Electronic Record (SAFER)	DPS Roadside Safety Inspection	cv driver record	Existing	Information typically maintained by a state driver licensing agency about a driver of a commercial vehicle including driver identification data, license data, permit data, and driving history details. The query flow is not explicitly shown.
Safety Fitness Electronic Record (SAFER)	DPS Roadside Safety Inspection	daily site activity data	Existing	Record of daily activities at commercial vehicle check stations including summaries of screening events and inspections.
Safety Fitness Electronic Record (SAFER)	DPS Roadside Safety Inspection	information on violators	Existing	Information on violators provided by a law enforcement agency. May include information about commercial vehicle violations or other kinds of violations associated with the particular entity. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
Safety Fitness Electronic Record (SAFER)	DPS Roadside Safety Inspection	safety inspection report	Existing	Report containing results of commercial vehicle safety inspection. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
Safety Fitness Electronic Record (SAFER)	DPS Roadside Safety Inspection	safety status information	Existing	Safety information such as safety ratings, security ratings or flags, inspection summaries, and violation summaries. A unique identifier is included. Corresponds to the safety and security portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
Safety Fitness Electronic Record (SAFER)	DPS Roadside Safety Inspection	targeted list	Existing	List of carriers, drivers, and/or vehicles of interest for enforcement purposes.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Safety Fitness Electronic Record (SAFER)	Fleet Management Systems	border clearance status	Planned	Notification regarding the crossing status of commercial freight shipment scheduled to enter the U.S. Includes portions of border agency and transportation agency clearance results, as those results become available.
Safety Fitness Electronic Record (SAFER)	Fleet Management Systems	citation	Planned	Report of commercial vehicle citation. The citation includes references to the statute(s) that was (were) violated. It includes information on the violator and the officer issuing the citation. A citation differs from a violation because it is adjudicated by the courts. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
Safety Fitness Electronic Record (SAFER)	Fleet Management Systems	trigger area	Planned	A geographic area a commercial motor vehicle crosses into, which initiates a request to compile and transmit a safety data message. May be associated with a time period.
Safety Fitness Electronic Record (SAFER)	Fleet Management Systems	trigger area notification	Planned	Notification to activate wireless roadside inspection safety data message collection.
Safety Fitness Electronic Record (SAFER)	Freight Shipping System	border clearance status	Planned	Notification regarding the crossing status of commercial freight shipment scheduled to enter the U.S. Includes portions of border agency and transportation agency clearance results, as those results become available.
Safety Fitness Electronic Record (SAFER)	International Fuel Tax Agreement (IFTA) Clearinghouse	commercial vehicle permit information	Planned	Information for commercial vehicle permits for oversize, overweight, or for dangerous goods. The query flow is not explicitly shown.
Safety Fitness Electronic Record (SAFER)	International Fuel Tax Agreement (IFTA) Clearinghouse	credentials information	Existing	Response containing full vehicle fuel tax and registration credentials information. "Response" may be provided in reaction to a real-time query or a standing request for updated information. The query flow is not explicitly shown.
Safety Fitness Electronic Record (SAFER)	International Fuel Tax Agreement (IFTA) Clearinghouse	credentials status information	Existing	Credentials information such as registration, licensing, insurance, check flags, and electronic screening enrollment data. A unique identifier is included. Corresponds to the credentials portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
Safety Fitness Electronic Record (SAFER)	International Fuel Tax Agreement (IFTA) Clearinghouse	safety status information	Existing	Safety information such as safety ratings, security ratings or flags, inspection summaries, and violation summaries. A unique identifier is included. Corresponds to the safety and security portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
Safety Fitness Electronic Record (SAFER)	International Fuel Tax Agreement (IFTA) Clearinghouse	targeted list	Existing	List of carriers, drivers, and/or vehicles of interest for enforcement purposes.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Safety Fitness Electronic Record (SAFER)	International Fuel Tax Agreement (IFTA) Clearinghouse	trigger area definition	Planned	Information that defines the desired trigger area for wireless roadside inspection safety data message submission.
Safety Fitness Electronic Record (SAFER)	International Fuel Tax Agreement (IFTA) Clearinghouse	trigger control	Planned	Controls to enable or disable a particular trigger.
Safety Fitness Electronic Record (SAFER)	International Registration Plan (IRP) Clearinghouse	border clearance status	Existing	Notification regarding the crossing status of commercial freight shipment scheduled to enter the U.S. Includes portions of border agency and transportation agency clearance results, as those results become available.
Safety Fitness Electronic Record (SAFER)	International Registration Plan (IRP) Clearinghouse	commercial vehicle permit information	Planned	Information for commercial vehicle permits for oversize, overweight, or for dangerous goods. The query flow is not explicitly shown.
Safety Fitness Electronic Record (SAFER)	International Registration Plan (IRP) Clearinghouse	credentials information	Existing	Response containing full vehicle fuel tax and registration credentials information. "Response" may be provided in reaction to a real-time query or a standing request for updated information. The query flow is not explicitly shown.
Safety Fitness Electronic Record (SAFER)	International Registration Plan (IRP) Clearinghouse	credentials status information	Existing	Credentials information such as registration, licensing, insurance, check flags, and electronic screening enrollment data. A unique identifier is included. Corresponds to the credentials portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
Safety Fitness Electronic Record (SAFER)	International Registration Plan (IRP) Clearinghouse	safety inspection report	Existing	Report containing results of commercial vehicle safety inspection. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
Safety Fitness Electronic Record (SAFER)	International Registration Plan (IRP) Clearinghouse	safety status information	Existing	Safety information such as safety ratings, security ratings or flags, inspection summaries, and violation summaries. A unique identifier is included. Corresponds to the safety and security portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
Safety Fitness Electronic Record (SAFER)	International Registration Plan (IRP) Clearinghouse	targeted list	Existing	List of carriers, drivers, and/or vehicles of interest for enforcement purposes.
Safety Fitness Electronic Record (SAFER)	International Registration Plan (IRP) Clearinghouse	trigger area definition	Planned	Information that defines the desired trigger area for wireless roadside inspection safety data message submission.
Safety Fitness Electronic Record (SAFER)	International Registration Plan (IRP) Clearinghouse	trigger control	Planned	Controls to enable or disable a particular trigger.
Safety Fitness Electronic Record (SAFER)	POE Administration Center	border clearance status	Existing	Notification regarding the crossing status of commercial freight shipment scheduled to enter the U.S. Includes portions of border agency and transportation agency clearance results, as those results become available.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Safety Fitness Electronic Record (SAFER)	POE Administration Center	client verification information	Existing	Information about carriers who have made border credential applications such as commercial drivers license information and carrier safety status.
Safety Fitness Electronic Record (SAFER)	POE Administration Center	screening results	Existing	Results of commercial vehicle screening event at a border crossing - reports clearance event data regarding action taken at border, including acceptance or override of system decision, and date/time stamp.
Safety Fitness Electronic Record (SAFER)	POE Data Archive	commercial vehicle archive data	Planned	Information describing commercial vehicle travel and commodity flow characteristics. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
Social Media and Networking	ADOT DEOC-Dept EM Ops Center	traveler sourced updates	Planned	Traveler posts on traffic and road conditions, parking availability, transit services, traveler services, shelter information, hazards, debris, obstacles, and other real-time crowd-sourced data that may be shared with other travelers.
Social Media and Networking	ADOT ECD Dispatch	traveler sourced updates	Planned	Traveler posts on traffic and road conditions, parking availability, transit services, traveler services, shelter information, hazards, debris, obstacles, and other real-time crowd-sourced data that may be shared with other travelers.
Social Media and Networking	ADOT TOC and EMC	traveler sourced updates	Planned	Traveler posts on traffic and road conditions, parking availability, transit services, traveler services, shelter information, hazards, debris, obstacles, and other real-time crowd-sourced data that may be shared with other travelers.
Social Media and Networking	Cities and Towns EOC-EMC	traveler sourced updates	Planned	Traveler posts on traffic and road conditions, parking availability, transit services, traveler services, shelter information, hazards, debris, obstacles, and other real-time crowd-sourced data that may be shared with other travelers.
Social Media and Networking	Cities and Towns Police and Fire Dispatch	traveler sourced updates	Planned	Traveler posts on traffic and road conditions, parking availability, transit services, traveler services, shelter information, hazards, debris, obstacles, and other real-time crowd-sourced data that may be shared with other travelers.
Social Media and Networking	County EMC-EOC	traveler sourced updates	Planned	Traveler posts on traffic and road conditions, parking availability, transit services, traveler services, shelter information, hazards, debris, obstacles, and other real-time crowd-sourced data that may be shared with other travelers.
Social Media and Networking	County Sheriff Dispatch	traveler sourced updates	Planned	Traveler posts on traffic and road conditions, parking availability, transit services, traveler services, shelter information, hazards, debris, obstacles, and other real-time crowd-sourced data that may be shared with other travelers.
Social Media and Networking	DEMA SEOC Arizona DEM Military Affairs	traveler sourced updates	Planned	Traveler posts on traffic and road conditions, parking availability, transit services, traveler services, shelter information, hazards, debris, obstacles, and other real-time crowd-sourced data that may be shared with other travelers.
Social Media and Networking	DPS Central Communications Center	traveler sourced updates	Planned	Traveler posts on traffic and road conditions, parking availability, transit services, traveler services, shelter information, hazards, debris, obstacles, and other real-time crowd-sourced data that may be shared with other travelers.
Social Media and Networking	Maricopa County EOC	traveler sourced updates	Planned	Traveler posts on traffic and road conditions, parking availability, transit services, traveler services, shelter information, hazards, debris, obstacles, and other real-time crowd-sourced data that may be shared with other travelers.
Social Media and Networking	Mexico Customs and Border Patrol	traveler sourced updates	Planned	Traveler posts on traffic and road conditions, parking availability, transit services, traveler services, shelter information, hazards, debris, obstacles, and other real-time crowd-sourced data that may be shared with other travelers.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Social Media and Networking	Mexico Public Safety	traveler sourced updates	Planned	Traveler posts on traffic and road conditions, parking availability, transit services, traveler services, shelter information, hazards, debris, obstacles, and other real-time crowd-sourced data that may be shared with other travelers.
Social Media and Networking	Nevada State Police Dispatch	traveler sourced updates	Planned	Traveler posts on traffic and road conditions, parking availability, transit services, traveler services, shelter information, hazards, debris, obstacles, and other real-time crowd-sourced data that may be shared with other travelers.
Social Media and Networking	New Mexico State Police Dispatch	traveler sourced updates	Planned	Traveler posts on traffic and road conditions, parking availability, transit services, traveler services, shelter information, hazards, debris, obstacles, and other real-time crowd-sourced data that may be shared with other travelers.
Social Media and Networking	Tribal Public Safety Dispatch	traveler sourced updates	Planned	Traveler posts on traffic and road conditions, parking availability, transit services, traveler services, shelter information, hazards, debris, obstacles, and other real-time crowd-sourced data that may be shared with other travelers.
Social Media and Networking	Utah State Police Dispatch	traveler sourced updates	Planned	Traveler posts on traffic and road conditions, parking availability, transit services, traveler services, shelter information, hazards, debris, obstacles, and other real-time crowd-sourced data that may be shared with other travelers.
State Universities Data Archives	ADOT AZ Crash Information System (ACIS)	archived data products	Planned	Raw or processed data, meta data, data catalogs and other data products provided to a user system upon request. The response may also include any associated transaction information.
State Universities Data Archives	ADOT TOC Data Archive	archive coordination	Planned	Catalog data, meta data, published data, and other information exchanged between archives to support data synchronization and satisfy user data requests.
State Universities Data Archives	ADOT TOC Data Archive	other data source archive data	Planned	Data extracted from other data sources. A wide range of ITS and non-ITS data and associated meta data may be provided.
State Universities Data Archives	ADOT TOC Data User System	archive analysis results	Planned	Processed information products, supporting meta data, and any associated transaction information resulting from data mining, analytical processing, aggregation or summarization, report formulation, or other on-line processing and analysis of archived data.
State Universities Data Archives	ADOT TOC Data User System	archive request confirmation	Planned	Confirmation that an archive request has been received and processed with information on the disposition of the request.
State Universities Data Archives	ADOT TOC Data User System	archived data products	Planned	Raw or processed data, meta data, data catalogs and other data products provided to a user system upon request. The response may also include any associated transaction information.
State Universities Data Archives	ADOT TOC Traffic Information Center	archive status	Planned	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
State Universities Data Archives	Archive Data Users	archived data products	Planned	Raw or processed data, meta data, data catalogs and other data products provided to a user system upon request. The response may also include any associated transaction information.
State Universities Data Archives	AZTech RADS Data User System	archive analysis results	Planned	Processed information products, supporting meta data, and any associated transaction information resulting from data mining, analytical processing, aggregation or summarization, report formulation, or other on-line processing and analysis of archived data.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
State Universities Data Archives	AZTech RADS Data User System	archive request confirmation	Planned	Confirmation that an archive request has been received and processed with information on the disposition of the request.
State Universities Data Archives	AZTech RADS Data User System	archived data products	Planned	Raw or processed data, meta data, data catalogs and other data products provided to a user system upon request. The response may also include any associated transaction information.
State Universities Data Archives	Cities and Towns Data User Systems	archived data products	Planned	Raw or processed data, meta data, data catalogs and other data products provided to a user system upon request. The response may also include any associated transaction information.
State Universities Data Archives	County Data User Systems	archived data products	Planned	Raw or processed data, meta data, data catalogs and other data products provided to a user system upon request. The response may also include any associated transaction information.
State Universities Data Archives	MAG Data User Systems	archived data products	Planned	Raw or processed data, meta data, data catalogs and other data products provided to a user system upon request. The response may also include any associated transaction information.
State Universities Data Archives	MPO-COG Data User Systems	archived data products	Planned	Raw or processed data, meta data, data catalogs and other data products provided to a user system upon request. The response may also include any associated transaction information.
State Universities Data Archives	MPO-COG Planning Traffic Database	archive coordination	Planned	Catalog data, meta data, published data, and other information exchanged between archives to support data synchronization and satisfy user data requests.
State Universities Data Archives	MPO-COG Planning Traffic Database	archive status	Planned	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
State Universities Data Archives	MPO-COG Planning Traffic Database	other data source archive data	Planned	Data extracted from other data sources. A wide range of ITS and non-ITS data and associated meta data may be provided.
State Universities Data Archives	PAG Data User Systems	archived data products	Planned	Raw or processed data, meta data, data catalogs and other data products provided to a user system upon request. The response may also include any associated transaction information.
State Universities Data Archives	State Universities Data User Systems	archived data products	Planned	Raw or processed data, meta data, data catalogs and other data products provided to a user system upon request. The response may also include any associated transaction information.
State Universities Data Archives	Tribal Public Safety Dispatch	archive status	Existing	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
State Universities Data User Systems	State Universities Data Archives	archived data product requests	Planned	A user-specified request for archived data products (i.e., data, meta data, or data catalogs). The request also includes information that is used to identify and authenticate the user and support electronic payment requirements, if any.
Transit Providers Dispatch (Public and Private)	ADOT DEOC-Dept EM Ops Center	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Transit Providers Dispatch (Public and Private)	ADOT DEOC-Dept EM Ops Center	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Transit Providers Dispatch (Public and Private)	ADOT DEOC-Dept EM Ops Center	emergency transit service response	Existing	Response indicating changes to transit service, fares, and/or restrictions that will be made and status of transit resources to be deployed to support emergency response and/or evacuation.
Transit Providers Dispatch (Public and Private)	ADOT DEOC-Dept EM Ops Center	transit emergency data	Planned	Initial notification of transit emergency at a transit stop or on transit vehicles and further coordination as additional details become available and the response is coordinated.
Transit Providers Dispatch (Public and Private)	ADOT DEOC-Dept EM Ops Center	transit probe data	Existing	Aggregate probe data derived from tracking transit vehicles. Data collected could include transit vehicle speeds and travel times for a given link or collection of links.
Transit Providers Dispatch (Public and Private)	ADOT DEOC-Dept EM Ops Center	transit system status assessment	Existing	Assessment of damage sustained by the public transportation system including location and extent of the damage, current operational status including an estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Transit Providers Dispatch (Public and Private)	Cities and Towns Police and Fire Dispatch	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
Transit Providers Dispatch (Public and Private)	Cities and Towns Police and Fire Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Transit Providers Dispatch (Public and Private)	Cities and Towns Police and Fire Dispatch	emergency transit schedule information	Existing	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
Transit Providers Dispatch (Public and Private)	Cities and Towns Police and Fire Dispatch	emergency transit service response	Existing	Response indicating changes to transit service, fares, and/or restrictions that will be made and status of transit resources to be deployed to support emergency response and/or evacuation.
Transit Providers Dispatch (Public and Private)	Cities and Towns Police and Fire Dispatch	transit system status assessment	Planned	Assessment of damage sustained by the public transportation system including location and extent of the damage, current operational status including an estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Transit Providers Dispatch (Public and Private)	Cities and Towns Transit Dispatch	transit fare coordination	Planned	Fare and pricing information shared between local/regional transit organizations.
Transit Providers Dispatch (Public and Private)	Cities and Towns Transit Dispatch	transit service coordination	Existing	Schedule coordination or AVL information shared between local/regional transit organizations. This includes coordination of connections and control parameters between transit properties as well as coordination of transit-related maintenance activities.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Transit Providers Dispatch (Public and Private)	Cities and Towns Transit Dispatch	transit traveler information coordination	Planned	Transit schedules, real-time arrival information, fare schedules, and general transit service information shared between transit organizations to support transit traveler information systems.
Transit Providers Dispatch (Public and Private)	County EMC-EOC	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
Transit Providers Dispatch (Public and Private)	County EMC-EOC	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Transit Providers Dispatch (Public and Private)	County EMC-EOC	emergency transit schedule information	Existing	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
Transit Providers Dispatch (Public and Private)	County EMC-EOC	emergency transit service response	Existing	Response indicating changes to transit service, fares, and/or restrictions that will be made and status of transit resources to be deployed to support emergency response and/or evacuation.
Transit Providers Dispatch (Public and Private)	County EMC-EOC	transit system status assessment	Planned	Assessment of damage sustained by the public transportation system including location and extent of the damage, current operational status including an estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Transit Providers Dispatch (Public and Private)	County Transit Kiosks	fare management information	Planned	Transit fare information and transaction data used to manage transit fare processing.
Transit Providers Dispatch (Public and Private)	County Transit Kiosks	transit traveler information	Planned	Transit information prepared to support transit users and other travelers. It contains transit schedules, real-time arrival information, fare schedules, alerts and advisories, and general transit service information.
Transit Providers Dispatch (Public and Private)	County Website and NIXLE	emergency transit schedule information	Planned	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
Transit Providers Dispatch (Public and Private)	County Website and NIXLE	transit probe data	Planned	Aggregate probe data derived from tracking transit vehicles. Data collected could include transit vehicle speeds and travel times for a given link or collection of links.
Transit Providers Dispatch (Public and Private)	County Website and NIXLE	transit schedule adherence information	Planned	Dynamic transit schedule adherence and transit vehicle location information.
Transit Providers Dispatch (Public and Private)	County Website and NIXLE	transit service coordination	Planned	Schedule coordination or AVL information shared between local/regional transit organizations. This includes coordination of connections and control parameters between transit properties as well as coordination of transit-related maintenance activities.
Transit Providers Dispatch (Public and Private)	DEMA SEOC Arizona DEM Military Affairs	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Transit Providers Dispatch (Public and Private)	DEMA SEOC Arizona DEM Military Affairs	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Transit Providers Dispatch (Public and Private)	DEMA SEOC Arizona DEM Military Affairs	emergency transit schedule information	Existing	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
Transit Providers Dispatch (Public and Private)	DEMA SEOC Arizona DEM Military Affairs	emergency transit service response	Existing	Response indicating changes to transit service, fares, and/or restrictions that will be made and status of transit resources to be deployed to support emergency response and/or evacuation.
Transit Providers Dispatch (Public and Private)	DEMA SEOC Arizona DEM Military Affairs	transit system status assessment	Planned	Assessment of damage sustained by the public transportation system including location and extent of the damage, current operational status including an estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Transit Providers Dispatch (Public and Private)	Financial Institution	payment request	Planned	Request for payment from financial institution or related financial service requests (e.g., balance inquiry)
Transit Providers Dispatch (Public and Private)	Independent School District Bus Dispatch	transit service coordination	Planned	Schedule coordination or AVL information shared between local/regional transit organizations. This includes coordination of connections and control parameters between transit properties as well as coordination of transit-related maintenance activities.
Transit Providers Dispatch (Public and Private)	Local Dial-A-Ride Transit Dispatchers	transit fare coordination	Planned	Fare and pricing information shared between local/regional transit organizations.
Transit Providers Dispatch (Public and Private)	Local Dial-A-Ride Transit Dispatchers	transit service coordination	Planned	Schedule coordination or AVL information shared between local/regional transit organizations. This includes coordination of connections and control parameters between transit properties as well as coordination of transit-related maintenance activities.
Transit Providers Dispatch (Public and Private)	Local Dial-A-Ride Transit Dispatchers	transit traveler information coordination	Planned	Transit schedules, real-time arrival information, fare schedules, and general transit service information shared between transit organizations to support transit traveler information systems.
Transit Providers Dispatch (Public and Private)	Local Print and Broadcast Media	transit incident information	Planned	Information on transit incidents that impact transit services for public dissemination.
Transit Providers Dispatch (Public and Private)	Mexico Public Safety	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
Transit Providers Dispatch (Public and Private)	Mexico Public Safety	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Transit Providers Dispatch (Public and Private)	Mexico Public Safety	emergency transit schedule information	Planned	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Transit Providers Dispatch (Public and Private)	Mexico Public Safety	emergency transit service response	Planned	Response indicating changes to transit service, fares, and/or restrictions that will be made and status of transit resources to be deployed to support emergency response and/or evacuation.
Transit Providers Dispatch (Public and Private)	Mexico Public Safety	transit system status assessment	Planned	Assessment of damage sustained by the public transportation system including location and extent of the damage, current operational status including an estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Transit Providers Dispatch (Public and Private)	MPO-COG Planning Traffic Database	archived data product requests	Planned	A user-specified request for archived data products (i.e., data, meta data, or data catalogs). The request also includes information that is used to identify and authenticate the user and support electronic payment requirements, if any.
Transit Providers Dispatch (Public and Private)	MPO-COG Planning Traffic Database	transit archive data	Planned	Data used to describe and monitor transit demand, fares, operations, and system performance. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
Transit Providers Dispatch (Public and Private)	NAIPTA (dba Mountain Line) Paratransit	transit service coordination	Planned	Schedule coordination or AVL information shared between local/regional transit organizations. This includes coordination of connections and control parameters between transit properties as well as coordination of transit-related maintenance activities.
Transit Providers Dispatch (Public and Private)	NAIPTA (dba Mountain Line) Website and FLGRide	demand responsive transit plan	Planned	Plan regarding overall demand responsive transit schedules and deployment.
Transit Providers Dispatch (Public and Private)	NAIPTA (dba Mountain Line) Website and FLGRide	emergency transit schedule information	Existing	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
Transit Providers Dispatch (Public and Private)	NAIPTA (dba Mountain Line) Website and FLGRide	transit and fare schedules	Planned	Transit service information including routes, schedules, and fare information. This also includes on-demand service information.
Transit Providers Dispatch (Public and Private)	NAIPTA (dba Mountain Line) Website and FLGRide	transit schedule adherence information	Planned	Dynamic transit schedule adherence and transit vehicle location information.
Transit Providers Dispatch (Public and Private)	Payment Administration Center	account updates	Planned	Updates to an account, such as purchases, uses, cancellation, secureID changes or similar material changes to account information.
Transit Providers Dispatch (Public and Private)	Payment Administration Center	smart card reconciliation	Planned	Detailed list of charges of the form charge/transport provider, taken from a smart card that need to be applied to the listed providers.
Transit Providers Dispatch (Public and Private)	Personal Information Devices for Travelers	personal transit information	Planned	General and personalized transit information for a particular fixed route, flexible route, or paratransit system.
Transit Providers Dispatch (Public and Private)	Personal Information Devices for Travelers	traveler payment request	Planned	Request for information supporting payments. For fee structures that include incentives, the request may support either an account debit or an account credit or reimbursement.
Transit Providers Dispatch (Public and Private)	Private Transit Routing Service Provider	authorization response	Planned	Notification of status of authorization request.
Transit Providers Dispatch (Public and Private)	Private Transit Routing Service Provider	fare management information	Planned	Transit fare information and transaction data used to manage transit fare processing.
Transit Providers Dispatch (Public and Private)	Private Transit Routing Service Provider	personal transit information	Planned	General and personalized transit information for a particular fixed route, flexible route, or paratransit system.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Transit Providers Dispatch (Public and Private)	Private Transit Routing Service Provider	transit traveler information	Planned	Transit information prepared to support transit users and other travelers. It contains transit schedules, real-time arrival information, fare schedules, alerts and advisories, and general transit service information.
Transit Providers Dispatch (Public and Private)	Private Transit Routing Service Provider	traveler payment request	Planned	Request for information supporting payments. For fee structures that include incentives, the request may support either an account debit or an account credit or reimbursement.
Transit Providers Dispatch (Public and Private)	Private Transit Routing Service Provider	user account reports	Planned	Reports on services offered/provided and associated charges.
Transit Providers Dispatch (Public and Private)	Public Private Traveler Information	emergency transit schedule information	Existing	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
Transit Providers Dispatch (Public and Private)	Public Private Traveler Information	transit and fare schedules	Planned	Transit service information including routes, schedules, and fare information. This also includes on-demand service information.
Transit Providers Dispatch (Public and Private)	Public Private Traveler Information	transit fare information	Planned	Information provided by transit management that supports fare payment transactions.
Transit Providers Dispatch (Public and Private)	Public Private Traveler Information	transit probe data	Planned	Aggregate probe data derived from tracking transit vehicles. Data collected could include transit vehicle speeds and travel times for a given link or collection of links.
Transit Providers Dispatch (Public and Private)	Public Private Traveler Information	transit schedule adherence information	Planned	Dynamic transit schedule adherence and transit vehicle location information.
Transit Providers Dispatch (Public and Private)	Transit Providers Vehicles (Public and Private)	alarm acknowledge	Planned	Confirmation that alarm was received, instructions and additional information for the alarm initiator, and requests for additional information.
Transit Providers Dispatch (Public and Private)	Transit Providers Vehicles (Public and Private)	fare management information	Planned	Transit fare information and transaction data used to manage transit fare processing.
Transit Providers Dispatch (Public and Private)	Transit Providers Vehicles (Public and Private)	remote vehicle disable	Planned	Signal used to remotely disable a transit vehicle.
Transit Providers Dispatch (Public and Private)	Transit Providers Vehicles (Public and Private)	transit schedule information	Planned	Current and projected transit schedule information used to initialize the transit vehicle with a vehicle assignment, monitor schedule performance, and develop corrective actions on-board.
Transit Providers Dispatch (Public and Private)	Transit Providers Vehicles (Public and Private)	transit stop request	Planned	Notification that a transit stop has been requested by a transit user at a roadside stop. This flow identifies the route, stop, and the time of the request.
Transit Providers Dispatch (Public and Private)	Transit Providers Vehicles (Public and Private)	transit traveler information	Planned	Transit information prepared to support transit users and other travelers. It contains transit schedules, real-time arrival information, fare schedules, alerts and advisories, and general transit service information.
Transit Providers Dispatch (Public and Private)	Transit Providers Vehicles (Public and Private)	transit vehicle operator authentication update	Planned	Results of authentication process or update of on-board authentication database.
Transit Providers Dispatch (Public and Private)	Transit Providers Vehicles (Public and Private)	transit vehicle operator information	Planned	Transit service instructions, wide area alerts, traffic information, road conditions, and other information for both transit and paratransit operators.
Transit Providers Dispatch (Public and Private)	Tribal Public Safety Dispatch	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Transit Providers Dispatch (Public and Private)	Tribal Public Safety Dispatch	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Transit Providers Dispatch (Public and Private)	Tribal Public Safety Dispatch	emergency transit schedule information	Planned	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
Transit Providers Dispatch (Public and Private)	Tribal Public Safety Dispatch	emergency transit service response	Planned	Response indicating changes to transit service, fares, and/or restrictions that will be made and status of transit resources to be deployed to support emergency response and/or evacuation.
Transit Providers Dispatch (Public and Private)	Tribal Public Safety Dispatch	transit system status assessment	Planned	Assessment of damage sustained by the public transportation system including location and extent of the damage, current operational status including an estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Transit Providers Dispatch (Public and Private)	Tribal TMC-TOC-TIC	emergency transit schedule information	Planned	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
Transit Providers Dispatch (Public and Private)	Tribal Transit Centers	transit fare coordination	Planned	Fare and pricing information shared between local/regional transit organizations.
Transit Providers Dispatch (Public and Private)	Tribal Transit Centers	transit service coordination	Planned	Schedule coordination or AVL information shared between local/regional transit organizations. This includes coordination of connections and control parameters between transit properties as well as coordination of transit-related maintenance activities.
Transit Providers Dispatch (Public and Private)	Tribal Transit Centers	transit traveler information coordination	Planned	Transit schedules, real-time arrival information, fare schedules, and general transit service information shared between transit organizations to support transit traveler information systems.
Transit Providers Dispatch (Public and Private)	US Border Patrol Dispatch	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
Transit Providers Dispatch (Public and Private)	US Border Patrol Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Transit Providers Dispatch (Public and Private)	US Border Patrol Dispatch	emergency transit schedule information	Existing	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
Transit Providers Dispatch (Public and Private)	US Border Patrol Dispatch	emergency transit service response	Existing	Response indicating changes to transit service, fares, and/or restrictions that will be made and status of transit resources to be deployed to support emergency response and/or evacuation.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Transit Providers Dispatch (Public and Private)	US Border Patrol Dispatch	transit system status assessment	Planned	Assessment of damage sustained by the public transportation system including location and extent of the damage, current operational status including an estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Transit Providers Dispatch (Public and Private)	Utah State Police Dispatch	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
Transit Providers Dispatch (Public and Private)	Utah State Police Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Transit Providers Dispatch (Public and Private)	Utah State Police Dispatch	emergency transit schedule information	Existing	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
Transit Providers Dispatch (Public and Private)	Utah State Police Dispatch	emergency transit service response	Existing	Response indicating changes to transit service, fares, and/or restrictions that will be made and status of transit resources to be deployed to support emergency response and/or evacuation.
Transit Providers Dispatch (Public and Private)	Utah State Police Dispatch	transit system status assessment	Existing	Assessment of damage sustained by the public transportation system including location and extent of the damage, current operational status including an estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Transit Providers Dispatch (Public and Private)	Wide Area Alerting Systems	emergency transit schedule information	Planned	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
Transit Providers Dispatch (Public and Private)	YCAT Transit Passes	authorization response	Planned	Notification of status of authorization request.
Transit Providers Dispatch (Public and Private)	YCAT Transit Passes	fare management information	Existing	Transit fare information and transaction data used to manage transit fare processing.
Transit Providers Dispatch (Public and Private)	YCAT Website	demand responsive transit plan	Planned	Plan regarding overall demand responsive transit schedules and deployment.
Transit Providers Dispatch (Public and Private)	YCAT Website	emergency transit schedule information	Existing	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
Transit Providers Dispatch (Public and Private)	YCAT Website	transit and fare schedules	Planned	Transit service information including routes, schedules, and fare information. This also includes on-demand service information.
Transit Providers Dispatch (Public and Private)	YCAT Website	transit schedule adherence information	Planned	Dynamic transit schedule adherence and transit vehicle location information.
Transit Providers Dispatch (Public and Private)	Yuma County Area Transit (YCAT)	transit service coordination	Planned	Schedule coordination or AVL information shared between local/regional transit organizations. This includes coordination of connections and control parameters between transit properties as well as coordination of transit-related maintenance activities.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Transit Providers Vehicles (Public and Private)	Cities and Towns ITS Field Equipment	local signal priority request	Planned	Request from a vehicle to a signalized intersection for priority at that intersection. This flow also allows the vehicle to cancel a priority request (for example, when the vehicle clears the intersection).
Transit Providers Vehicles (Public and Private)	Payment Administration Center	authorization request	Planned	Request to determine if a transportation user is authorized to use a particular transportation resource.
Transit Providers Vehicles (Public and Private)	Transit Providers Dispatch (Public and Private)	alarm notification	Planned	Notification of activation of an audible or silent alarm by a traveler in a public area or by a transit vehicle operator using an on-board device.
Transit Providers Vehicles (Public and Private)	Transit Providers Dispatch (Public and Private)	demand response passenger and use data	Planned	Data collected on board a demand response vehicle relating to the picking up and discharging of passengers.
Transit Providers Vehicles (Public and Private)	Transit Providers Dispatch (Public and Private)	fare collection data	Planned	Fare collection information including the summary of fare system data and financial payment transaction data.
Transit Providers Vehicles (Public and Private)	Transit Providers Dispatch (Public and Private)	transit traveler request	Planned	Request by a Transit traveler to summon assistance, request transit information, or request any other transit services.
Transit Providers Vehicles (Public and Private)	Transit Providers Dispatch (Public and Private)	transit vehicle conditions	Planned	Operating conditions of transit vehicle (e.g., engine running, oil pressure, fuel level and usage). It includes status of other on-board systems including user displays, passenger counters, and security systems. This overall status information is also collected from unused (out of service) vehicles.
Transit Providers Vehicles (Public and Private)	Transit Providers Dispatch (Public and Private)	transit vehicle loading data	Planned	Data collected on board the transit vehicle relating to passenger boarding and alighting.
Transit Providers Vehicles (Public and Private)	Transit Providers Dispatch (Public and Private)	transit vehicle location data	Planned	Current transit vehicle location and related operational conditions data provided by a transit vehicle.
Transit Providers Vehicles (Public and Private)	Transit Providers Dispatch (Public and Private)	transit vehicle operator authentication information	Planned	Information regarding on-board transit operator authentication
Transit Providers Vehicles (Public and Private)	Transit Providers Dispatch (Public and Private)	transit vehicle schedule performance	Planned	Estimated times of arrival and anticipated schedule deviations reported by a transit vehicle.
Transit Providers Vehicles (Public and Private)	Traveler Card-Smartcard	payment device update	Planned	Information updated concerning traveler's personal data including name, address, user account information, trip records, and profile data.
Transit Providers Vehicles (Public and Private)	Traveler Card-Smartcard	request for payment	Planned	Request to deduct cost of service from user's payment account.
Transit Providers Vehicles (Public and Private)	Travelers	traveler interface updates	Planned	Visual or audio information (e.g., routes, messages, guidance, emergency information) that is provided to the traveler.
Transit Providers Vehicles (Public and Private)	YCAT Buses	host transit vehicle status	Planned	Information provided to the ITS on-board equipment from other systems on the Transit Vehicle Platform.
Transit Providers Vehicles (Public and Private)	YCAT Transit Passes	payment device update	Planned	Information updated concerning traveler's personal data including name, address, user account information, trip records, and profile data.
Transit Providers Vehicles (Public and Private)	YCAT Transit Passes	request for payment	Planned	Request to deduct cost of service from user's payment account.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Traveler Card-Smartcard	Cities and Towns Transit Vehicles	actuate secure payment	Planned	Initiation of a payment action, ideally based on an encrypted token or biometric marker. Such a payment action could be a simple validation that the secure token allows the user access to the travel resource, or it could be the initiation of a payment transaction.
Traveler Card-Smartcard	Cities and Towns Transit Vehicles	payment device information	Planned	Traveler payment information such as card number and previous transactions.
Traveler Card-Smartcard	County Transit Kiosks	actuate secure payment	Planned	Initiation of a payment action, ideally based on an encrypted token or biometric marker. Such a payment action could be a simple validation that the secure token allows the user access to the travel resource, or it could be the initiation of a payment transaction.
Traveler Card-Smartcard	County Transit Kiosks	payment device information	Planned	Traveler payment information such as card number and previous transactions.
Traveler Card-Smartcard	Electric Vehicle Charging Stations	actuate secure payment	Planned	Initiation of a payment action, ideally based on an encrypted token or biometric marker. Such a payment action could be a simple validation that the secure token allows the user access to the travel resource, or it could be the initiation of a payment transaction.
Traveler Card-Smartcard	Independent School District Buses	actuate secure payment	Planned	Initiation of a payment action, ideally based on an encrypted token or biometric marker. Such a payment action could be a simple validation that the secure token allows the user access to the travel resource, or it could be the initiation of a payment transaction.
Traveler Card-Smartcard	Independent School District Buses	payment device information	Planned	Traveler payment information such as card number and previous transactions.
Traveler Card-Smartcard	Local Dial-A-Ride Transit Vehicles	actuate secure payment	Planned	Initiation of a payment action, ideally based on an encrypted token or biometric marker. Such a payment action could be a simple validation that the secure token allows the user access to the travel resource, or it could be the initiation of a payment transaction.
Traveler Card-Smartcard	Local Dial-A-Ride Transit Vehicles	payment device information	Planned	Traveler payment information such as card number and previous transactions.
Traveler Card-Smartcard	NAIPTA (dba Mountain Line) Paratransit Vehicles	actuate secure payment	Planned	Initiation of a payment action, ideally based on an encrypted token or biometric marker. Such a payment action could be a simple validation that the secure token allows the user access to the travel resource, or it could be the initiation of a payment transaction.
Traveler Card-Smartcard	NAIPTA (dba Mountain Line) Paratransit Vehicles	payment device information	Planned	Traveler payment information such as card number and previous transactions.
Traveler Card-Smartcard	NAIPTA (dba Mountain Line) Transit Buses	actuate secure payment	Planned	Initiation of a payment action, ideally based on an encrypted token or biometric marker. Such a payment action could be a simple validation that the secure token allows the user access to the travel resource, or it could be the initiation of a payment transaction.
Traveler Card-Smartcard	NAIPTA (dba Mountain Line) Transit Buses	payment device information	Planned	Traveler payment information such as card number and previous transactions.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Traveler Card-Smartcard	Private Transit Routing Service Provider	actuate secure payment	Planned	Initiation of a payment action, ideally based on an encrypted token or biometric marker. Such a payment action could be a simple validation that the secure token allows the user access to the travel resource, or it could be the initiation of a payment transaction.
Traveler Card-Smartcard	Private Transit Routing Service Provider	payment device information	Planned	Traveler payment information such as card number and previous transactions.
Traveler Card-Smartcard	Private Vehicle OBE	border card data	Planned	Personal identification data from ID cards used by travelers at border crossings.
Traveler Card-Smartcard	Transit Providers Vehicles (Public and Private)	actuate secure payment	Planned	Initiation of a payment action, ideally based on an encrypted token or biometric marker. Such a payment action could be a simple validation that the secure token allows the user access to the travel resource, or it could be the initiation of a payment transaction.
Traveler Card-Smartcard	Transit Providers Vehicles (Public and Private)	payment device information	Planned	Traveler payment information such as card number and previous transactions.
Traveler Card-Smartcard	Tribal Transit Vehicles	actuate secure payment	Planned	Initiation of a payment action, ideally based on an encrypted token or biometric marker. Such a payment action could be a simple validation that the secure token allows the user access to the travel resource, or it could be the initiation of a payment transaction.
Traveler Card-Smartcard	Tribal Transit Vehicles	payment device information	Planned	Traveler payment information such as card number and previous transactions.
Traveler Card-Smartcard	YCAT Buses	actuate secure payment	Planned	Initiation of a payment action, ideally based on an encrypted token or biometric marker. Such a payment action could be a simple validation that the secure token allows the user access to the travel resource, or it could be the initiation of a payment transaction.
Traveler Card-Smartcard	YCAT Buses	payment device information	Planned	Traveler payment information such as card number and previous transactions.
Traveler Card-Smartcard	YCAT Kiosks	actuate secure payment	Planned	Initiation of a payment action, ideally based on an encrypted token or biometric marker. Such a payment action could be a simple validation that the secure token allows the user access to the travel resource, or it could be the initiation of a payment transaction.
Traveler Card-Smartcard	YCAT Kiosks	payment device information	Planned	Traveler payment information such as card number and previous transactions.
Traveler Card-Smartcard	YCAT Transit Passes	actuate secure payment	Planned	Initiation of a payment action, ideally based on an encrypted token or biometric marker. Such a payment action could be a simple validation that the secure token allows the user access to the travel resource, or it could be the initiation of a payment transaction.
Traveler Card-Smartcard	YCAT Transit Passes	payment device information	Planned	Traveler payment information such as card number and previous transactions.
Travelers	Cities and Towns Transit Vehicles	traveler input	Planned	User input from a traveler to summon assistance, request travel information, make a reservation, or request any other traveler service.
Travelers	County Transit Kiosks	traveler input	Existing	User input from a traveler to summon assistance, request travel information, make a reservation, or request any other traveler service.
Travelers	Independent School District Buses	traveler input	Existing	User input from a traveler to summon assistance, request travel information, make a reservation, or request any other traveler service.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Travelers	Local Dial-A-Ride Transit Vehicles	traveler input	Planned	User input from a traveler to summon assistance, request travel information, make a reservation, or request any other traveler service.
Travelers	NAIPTA (dba Mountain Line) Paratransit Vehicles	traveler input	Planned	User input from a traveler to summon assistance, request travel information, make a reservation, or request any other traveler service.
Travelers	NAIPTA (dba Mountain Line) Transit Buses	traveler input	Planned	User input from a traveler to summon assistance, request travel information, make a reservation, or request any other traveler service.
Travelers	Personal Information Devices for Travelers	traveler input	Existing	User input from a traveler to summon assistance, request travel information, make a reservation, or request any other traveler service.
Travelers	Private Transit Routing Service Provider	traveler input	Planned	User input from a traveler to summon assistance, request travel information, make a reservation, or request any other traveler service.
Travelers	Transit Providers Vehicles (Public and Private)	traveler input	Planned	User input from a traveler to summon assistance, request travel information, make a reservation, or request any other traveler service.
Travelers	YCAT Buses	traveler input	Planned	User input from a traveler to summon assistance, request travel information, make a reservation, or request any other traveler service.
Travelers	YCAT Kiosks	traveler input	Planned	User input from a traveler to summon assistance, request travel information, make a reservation, or request any other traveler service.
Travelers	YCAT Transit Passes	traveler input	Existing	User input from a traveler to summon assistance, request travel information, make a reservation, or request any other traveler service.
Tribal Data Archive	ADOT AZ Crash Information System (ACIS)	archive analysis results	Planned	Processed information products, supporting meta data, and any associated transaction information resulting from data mining, analytical processing, aggregation or summarization, report formulation, or other on-line processing and analysis of archived data.
Tribal Data Archive	ADOT AZ Crash Information System (ACIS)	archive request confirmation	Planned	Confirmation that an archive request has been received and processed with information on the disposition of the request.
Tribal Data Archive	ADOT AZ Crash Information System (ACIS)	archived data products	Planned	Raw or processed data, meta data, data catalogs and other data products provided to a user system upon request. The response may also include any associated transaction information.
Tribal Data Archive	ADOT HPMS Data Archive	archive coordination	Planned	Catalog data, meta data, published data, and other information exchanged between archives to support data synchronization and satisfy user data requests.
Tribal Data Archive	Archive Data Users	archived data products	Planned	Raw or processed data, meta data, data catalogs and other data products provided to a user system upon request. The response may also include any associated transaction information.
Tribal Data Archive	BIA Western Regional Website	archive status	Planned	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
Tribal Data Archive	Cities and Towns Data Archive	archive coordination	Planned	Catalog data, meta data, published data, and other information exchanged between archives to support data synchronization and satisfy user data requests.
Tribal Data Archive	DPS Data Archive	archive coordination	Existing	Catalog data, meta data, published data, and other information exchanged between archives to support data synchronization and satisfy user data requests.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Tribal Data Archive	PAG Planning Traffic Database	archive coordination	Planned	Catalog data, meta data, published data, and other information exchanged between archives to support data synchronization and satisfy user data requests.
Tribal Data Archive	Tribal Data User Systems	archived data products	Planned	Raw or processed data, meta data, data catalogs and other data products provided to a user system upon request. The response may also include any associated transaction information.
Tribal Data Archive	Tribal ITS Field Equipment	data collection and monitoring control	Planned	Information used to configure and control data collection and monitoring systems.
Tribal Data Archive	Tribal MCO Dispatch	archive status	Planned	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
Tribal Data Archive	Tribal Public Safety Dispatch	archive status	Planned	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
Tribal Data Archive	Tribal TMC-TOC-TIC	archive status	Planned	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
Tribal Data Archive	Tribal Transit Centers	archive status	Planned	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
Tribal Data User Systems	ADOT HPMS Data Archive	archived data product requests	Planned	A user-specified request for archived data products (i.e., data, meta data, or data catalogs). The request also includes information that is used to identify and authenticate the user and support electronic payment requirements, if any.
Tribal Data User Systems	Cities and Towns Data Archive	archived data product requests	Planned	A user-specified request for archived data products (i.e., data, meta data, or data catalogs). The request also includes information that is used to identify and authenticate the user and support electronic payment requirements, if any.
Tribal Data User Systems	MPO-COG Planning Traffic Database	archived data product requests	Planned	A user-specified request for archived data products (i.e., data, meta data, or data catalogs). The request also includes information that is used to identify and authenticate the user and support electronic payment requirements, if any.
Tribal Data User Systems	Tribal Data Archive	archived data product requests	Planned	A user-specified request for archived data products (i.e., data, meta data, or data catalogs). The request also includes information that is used to identify and authenticate the user and support electronic payment requirements, if any.
Tribal ITS Field Equipment	Rail Grade Wayside Warning Systems	rail crossing operational status	Planned	Status of the highway-rail grade crossing equipment including both the current state or mode of operation and the current equipment condition.
Tribal ITS Field Equipment	Tribal Data Archive	roadside archive data	Planned	A broad set of data derived from roadside sensors that includes current traffic conditions, environmental conditions, and any other data that can be directly collected by roadside sensors. This data also indicates the status of the sensors and reports of any identified sensor faults.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Tribal ITS Field Equipment	Tribal MCO Dispatch	environmental sensor data	Planned	Current road conditions (e.g., surface temperature, subsurface temperature, moisture, icing, treatment status) and surface weather conditions (e.g., air temperature, wind speed, precipitation, visibility) as measured and reported by fixed and/or mobile environmental sensors. Operational status of the sensors is also included.
Tribal ITS Field Equipment	Tribal MCO Dispatch	field equipment status	Planned	Reports from field equipment (sensors, signals, signs, controllers, etc.) which indicate current operational status.
Tribal ITS Field Equipment	Tribal MCO Dispatch	roadway dynamic signage status	Planned	Current operating status of dynamic message signs.
Tribal ITS Field Equipment	Tribal MCO Dispatch	traffic images	Planned	High fidelity, real-time traffic images suitable for surveillance monitoring by the operator or for use in machine vision applications. This flow includes the images. Meta data that describes the images is contained in another flow.
Tribal ITS Field Equipment	Tribal TMC-TOC-TIC	passive vehicle monitoring data	Planned	Time stamped identifiers that identify the vehicles that have passed through a detection zone.
Tribal ITS Field Equipment	Tribal TMC-TOC-TIC	right-of-way request notification	Planned	Notice that a request has occurred for signal prioritization, signal preemption, pedestrian call, multi-modal crossing activation, or other source for right-of-way.
Tribal ITS Field Equipment	Tribal TMC-TOC-TIC	roadway dynamic signage status	Planned	Current operating status of dynamic message signs.
Tribal ITS Field Equipment	Tribal TMC-TOC-TIC	signal control status	Planned	Operational and status data of traffic signal control equipment including operating condition and current indications.
Tribal ITS Field Equipment	Tribal TMC-TOC-TIC	signal fault data	Planned	Faults reported by traffic signal control equipment.
Tribal ITS Field Equipment	Tribal TMC-TOC-TIC	traffic detector data	Planned	Raw and/or processed traffic detector data which allows derivation of traffic flow variables (e.g., speed, volume, and density measures) and associated information (e.g., congestion, potential incidents). This flow includes the traffic data and the operational status of the traffic detectors
Tribal ITS Field Equipment	Tribal TMC-TOC-TIC	traffic images	Planned	High fidelity, real-time traffic images suitable for surveillance monitoring by the operator or for use in machine vision applications. This flow includes the images. Meta data that describes the images is contained in another flow.
Tribal MCO Dispatch	ATTP Tribal Coordination Website	current infrastructure restrictions	Planned	Restrictions levied on transportation asset usage based on infrastructure design, surveys, tests, or analyses. This includes standard facility design height, width, and weight restrictions, special restrictions such as spring weight restrictions, and temporary facility restrictions that are imposed during maintenance and construction.
Tribal MCO Dispatch	ATTP Tribal Coordination Website	maint and constr work plans	Planned	Future construction and maintenance work schedules and activities including anticipated closures with anticipated impact to the roadway, alternate routes, anticipated delays, closure times, and durations.
Tribal MCO Dispatch	ATTP Tribal Coordination Website	roadway maintenance status	Planned	Summary of maintenance fleet operations affecting the road network. This includes the status of winter maintenance (snow plow schedule and current status).

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Tribal MCO Dispatch	ATTP Tribal Coordination Website	work zone information	Planned	Summary of maintenance and construction work zone activities affecting the road network including the nature of the maintenance or construction activity, location, impact to the roadway, expected time(s) and duration of impact, anticipated delays, alternate routes, and suggested speed limits. This information may be augmented with images that provide a visual indication of current work zone status and traffic impacts.
Tribal MCO Dispatch	DEMA SEOC Arizona DEM Military Affairs	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Tribal MCO Dispatch	DEMA SEOC Arizona DEM Military Affairs	maint and constr resource response	Planned	Current status of maintenance and construction resources including availability and deployment status. General resource inventory information covering vehicles, equipment, materials, and people and specific resource deployment status may be included.
Tribal MCO Dispatch	DEMA SEOC Arizona DEM Military Affairs	road network status assessment	Planned	Assessment of damage sustained by the road network including location and extent of the damage, estimate of remaining capacity, required closures, alternate routes, necessary restrictions, and time frame for repair and recovery.
Tribal MCO Dispatch	Independent School District Bus Dispatch	current infrastructure restrictions	Existing	Restrictions levied on transportation asset usage based on infrastructure design, surveys, tests, or analyses. This includes standard facility design height, width, and weight restrictions, special restrictions such as spring weight restrictions, and temporary facility restrictions that are imposed during maintenance and construction.
Tribal MCO Dispatch	Independent School District Bus Dispatch	roadway maintenance status	Existing	Summary of maintenance fleet operations affecting the road network. This includes the status of winter maintenance (snow plow schedule and current status).
Tribal MCO Dispatch	Independent School District Bus Dispatch	work zone information	Existing	Summary of maintenance and construction work zone activities affecting the road network including the nature of the maintenance or construction activity, location, impact to the roadway, expected time(s) and duration of impact, anticipated delays, alternate routes, and suggested speed limits. This information may be augmented with images that provide a visual indication of current work zone status and traffic impacts.
Tribal MCO Dispatch	Tribal Data Archive	maint and constr archive data	Planned	Information describing road construction and maintenance activities identifying the type of activity, the work performed, and work zone information including work zone configuration and safety (e.g., a record of intrusions and vehicle speeds) information. For construction activities, this information also includes a description of the completed infrastructure, including as-built plans as applicable. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
Tribal MCO Dispatch	Tribal ITS Field Equipment	environmental sensor control	Planned	Data used to configure and control environmental sensors.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Tribal MCO Dispatch	Tribal ITS Field Equipment	roadway dynamic signage data	Planned	Information used to initialize, configure, and control dynamic message signs. This flow can provide message content and delivery attributes, local message store maintenance requests, control mode commands, status queries, and all other commands and associated parameters that support remote management of these devices.
Tribal MCO Dispatch	Tribal ITS Field Equipment	video surveillance control	Planned	Information used to configure and control video surveillance systems.
Tribal MCO Dispatch	Tribal MCO Vehicles	maint and constr dispatch information	Existing	Information used to dispatch maintenance and construction vehicles, equipment, and crews and information used to keep work zone crews informed. This information includes routing information, traffic information, road restrictions, incident information, environmental information, decision support information, maintenance schedule data, dispatch instructions, personnel assignments, alert notifications, and corrective actions.
Tribal MCO Dispatch	Tribal MCO Vehicles	maint and constr vehicle system control	Existing	Configure and control data that supports remote control of on-board maintenance and construction vehicle systems and field equipment that is remotely controlled by the vehicle. For example, the data can be used to adjust material application rates and spread patterns.
Tribal MCO Dispatch	Tribal Public Safety Dispatch	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
Tribal MCO Dispatch	Tribal Public Safety Dispatch	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Tribal MCO Dispatch	Tribal Public Safety Dispatch	maint and constr resource response	Planned	Current status of maintenance and construction resources including availability and deployment status. General resource inventory information covering vehicles, equipment, materials, and people and specific resource deployment status may be included.
Tribal MCO Dispatch	Tribal Public Safety Dispatch	road network status assessment	Planned	Assessment of damage sustained by the road network including location and extent of the damage, estimate of remaining capacity, required closures, alternate routes, necessary restrictions, and time frame for repair and recovery.
Tribal MCO Dispatch	Tribal Public Safety Dispatch	work zone information	Planned	Summary of maintenance and construction work zone activities affecting the road network including the nature of the maintenance or construction activity, location, impact to the roadway, expected time(s) and duration of impact, anticipated delays, alternate routes, and suggested speed limits. This information may be augmented with images that provide a visual indication of current work zone status and traffic impacts.
Tribal MCO Dispatch	Tribal TMC-TOC-TIC	equipment maintenance status	Planned	Current status of field equipment maintenance actions.
Tribal MCO Dispatch	Tribal TMC-TOC-TIC	maint and constr resource response	Planned	Current status of maintenance and construction resources including availability and deployment status. General resource inventory information covering vehicles, equipment, materials, and people and specific resource deployment status may be included.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Tribal MCO Dispatch	Tribal TMC-TOC-TIC	road network status assessment	Planned	Assessment of damage sustained by the road network including location and extent of the damage, estimate of remaining capacity, required closures, alternate routes, necessary restrictions, and time frame for repair and recovery.
Tribal MCO Dispatch	Tribal TMC-TOC-TIC	work zone information	Planned	Summary of maintenance and construction work zone activities affecting the road network including the nature of the maintenance or construction activity, location, impact to the roadway, expected time(s) and duration of impact, anticipated delays, alternate routes, and suggested speed limits. This information may be augmented with images that provide a visual indication of current work zone status and traffic impacts.
Tribal MCO Vehicles	Tribal MCO Dispatch	maint and constr dispatch status	Existing	Current maintenance and construction status including work data, operator status, crew status, and equipment status.
Tribal MCO Vehicles	Tribal MCO Dispatch	maint and constr vehicle operational data	Existing	Data that describes the maintenance and construction activity performed by the vehicle. Operational data includes materials usage (amount stored and current application rate), operational state of the maintenance equipment (e.g., blade up/down, spreader pattern), vehicle safety status, and other measures associated with the operation of a maintenance, construction, or other special purpose vehicle. Operational data may include basic operational status of the vehicle equipment or a more precise record of the work performed (e.g., application of crack sealant with precise locations and application characteristics).
Tribal MCO Vehicles	Tribal MCO Dispatch	work zone status	Planned	Current work zone status including current location (and future locations for moving work zones), impact to the roadway, required lane shifts, expected time(s) and duration of impact, anticipated delays, alternate routes, and suggested speed limits.
Tribal Police and Fire Vehicles	ADOT ITS Field Equipment	local signal preemption request	Planned	Direct control signal or message to a signalized intersection that results in preemption of the current control plan and grants right-of-way to the requesting vehicle.
Tribal Police and Fire Vehicles	Tribal ITS Field Equipment	local signal preemption request	Planned	Direct control signal or message to a signalized intersection that results in preemption of the current control plan and grants right-of-way to the requesting vehicle.
Tribal Police and Fire Vehicles	Tribal Public Safety Dispatch	emergency dispatch response	Planned	Request for additional emergency dispatch information and provision of en route status.
Tribal Police and Fire Vehicles	Tribal Public Safety Dispatch	emergency vehicle tracking data	Planned	The current location and operating status of the emergency vehicle.
Tribal Public Safety Dispatch	ADOT Crash Reporting Information System (CRIS)	emergency archive data	Planned	Logged emergency information including information that characterizes identified incidents (routine highway incidents through disasters), corresponding incident response information, evacuation information, surveillance data, threat data, and resource information. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Tribal Public Safety Dispatch	ADOT DEOC-Dept EM Ops Center	alert notification	Existing	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
Tribal Public Safety Dispatch	ADOT DEOC-Dept EM Ops Center	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Tribal Public Safety Dispatch	ADOT DEOC-Dept EM Ops Center	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Tribal Public Safety Dispatch	ADOT DEOC-Dept EM Ops Center	emergency traffic control request	Existing	Special request to preempt the current traffic control strategy in effect at one or more signalized intersections or highway segments, activate traffic control and closure systems such as gates and barriers, activate safeguard systems, or use driver information systems. For example, this flow can request all signals to red-flash, request a progression of traffic control preemptions along an emergency vehicle route, request a specific evacuation traffic control plan, request activation of a road closure barrier system, or place a public safety or emergency-related message on a dynamic message sign.
Tribal Public Safety Dispatch	ADOT DEOC-Dept EM Ops Center	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Tribal Public Safety Dispatch	ADOT DEOC-Dept EM Ops Center	evacuation information	Existing	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
Tribal Public Safety Dispatch	ADOT DEOC-Dept EM Ops Center	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Tribal Public Safety Dispatch	ADOT DEOC-Dept EM Ops Center	incident information	Existing	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
Tribal Public Safety Dispatch	ADOT DEOC-Dept EM Ops Center	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Tribal Public Safety Dispatch	ADOT DEOC-Dept EM Ops Center	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Tribal Public Safety Dispatch	ADOT DEOC-Dept EM Ops Center	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
Tribal Public Safety Dispatch	ADOT DEOC-Dept EM Ops Center	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Tribal Public Safety Dispatch	ADOT DEOC-Dept EM Ops Center	resource request	Planned	A request for resources to implement special traffic control measures, assist in clean up, verify an incident, etc. The request may poll for resource availability or request pre-staging, staging, or immediate deployment of resources. Resources may be explicitly requested or a service may be requested and the specific resource deployment may be determined by the responding agency.
Tribal Public Safety Dispatch	ADOT DEOC-Dept EM Ops Center	threat information	Existing	Threats regarding transportation infrastructure, facilities, or systems detected by a variety of methods (sensors, surveillance, threat analysis of advisories from outside agencies, etc.
Tribal Public Safety Dispatch	ADOT DEOC-Dept EM Ops Center	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
Tribal Public Safety Dispatch	ADOT DEOC-Dept EM Ops Center	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Tribal Public Safety Dispatch	ADOT ECD Dispatch	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Tribal Public Safety Dispatch	ADOT ECD Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Tribal Public Safety Dispatch	ADOT ECD Dispatch	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Tribal Public Safety Dispatch	ADOT ECD Dispatch	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Tribal Public Safety Dispatch	ADOT ECD Dispatch	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
Tribal Public Safety Dispatch	ADOT ECD Dispatch	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Tribal Public Safety Dispatch	ADOT ECD Dispatch	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Tribal Public Safety Dispatch	ADOT ECD Dispatch	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
Tribal Public Safety Dispatch	ADOT ECD Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Tribal Public Safety Dispatch	ADOT ECD Operational Communications	alert notification coordination	Planned	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Tribal Public Safety Dispatch	ADOT ECD Operational Communications	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Tribal Public Safety Dispatch	ADOT ECD Operational Communications	evacuation coordination	Planned	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Tribal Public Safety Dispatch	ADOT ECD Operational Communications	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Tribal Public Safety Dispatch	ADOT ECD Operational Communications	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
Tribal Public Safety Dispatch	ADOT ECD Operational Communications	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
Tribal Public Safety Dispatch	ADOT ECD Operational Communications	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Tribal Public Safety Dispatch	ADOT ECD Operational Communications	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
Tribal Public Safety Dispatch	ADOT ECD Operational Communications	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Tribal Public Safety Dispatch	ADOT Motor Vehicle Division (MVD) Database	emergency archive data	Planned	Logged emergency information including information that characterizes identified incidents (routine highway incidents through disasters), corresponding incident response information, evacuation information, surveillance data, threat data, and resource information. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
Tribal Public Safety Dispatch	ADOT TOC and EMC	alert notification	Existing	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
Tribal Public Safety Dispatch	ADOT TOC and EMC	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Tribal Public Safety Dispatch	ADOT TOC and EMC	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Tribal Public Safety Dispatch	ADOT TOC and EMC	emergency route request	Planned	Request for access routes for emergency response vehicles and equipment. This may be a request for ingress or egress routes or other emergency routes. It may also include a request for preemption/priority for the identified vehicle at all signalized intersections along the route.
Tribal Public Safety Dispatch	ADOT TOC and EMC	emergency traffic control request	Existing	Special request to preempt the current traffic control strategy in effect at one or more signalized intersections or highway segments, activate traffic control and closure systems such as gates and barriers, activate safeguard systems, or use driver information systems. For example, this flow can request all signals to red-flash, request a progression of traffic control preemptions along an emergency vehicle route, request a specific evacuation traffic control plan, request activation of a road closure barrier system, or place a public safety or emergency-related message on a dynamic message sign.
Tribal Public Safety Dispatch	ADOT TOC and EMC	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Tribal Public Safety Dispatch	ADOT TOC and EMC	evacuation information	Existing	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
Tribal Public Safety Dispatch	ADOT TOC and EMC	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Tribal Public Safety Dispatch	ADOT TOC and EMC	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
Tribal Public Safety Dispatch	ADOT TOC and EMC	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
Tribal Public Safety Dispatch	ADOT TOC and EMC	incident response coordination	Existing	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Tribal Public Safety Dispatch	ADOT TOC and EMC	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Tribal Public Safety Dispatch	ADOT TOC and EMC	remote surveillance control	Existing	The control commands used to remotely operate another center's sensors or surveillance equipment so that roadside surveillance assets can be shared by more than one agency.
Tribal Public Safety Dispatch	ADOT TOC and EMC	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Tribal Public Safety Dispatch	ADOT TOC and EMC	resource deployment status	Planned	Status of resource deployment identifying the resources (vehicles, equipment, materials, and personnel) available and their current status. General resource inventory information and specific status of deployed resources may be included.
Tribal Public Safety Dispatch	ADOT TOC and EMC	resource request	Planned	A request for resources to implement special traffic control measures, assist in clean up, verify an incident, etc. The request may poll for resource availability or request pre-staging, staging, or immediate deployment of resources. Resources may be explicitly requested or a service may be requested and the specific resource deployment may be determined by the responding agency.
Tribal Public Safety Dispatch	ADOT TOC and EMC	road closure notification	Existing	Notification that agency personnel have closed a road due to adverse weather, major incident, or other reason.
Tribal Public Safety Dispatch	ADOT TOC and EMC	threat information	Planned	Threats regarding transportation infrastructure, facilities, or systems detected by a variety of methods (sensors, surveillance, threat analysis of advisories from outside agencies, etc.
Tribal Public Safety Dispatch	ADOT TOC and EMC	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
Tribal Public Safety Dispatch	ADOT TOC and EMC	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Tribal Public Safety Dispatch	ATTP Tribal Coordination Website	alert notification	Planned	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
Tribal Public Safety Dispatch	ATTP Tribal Coordination Website	evacuation information	Planned	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
Tribal Public Safety Dispatch	ATTP Tribal Coordination Website	incident information for public	Planned	Report of current desensitized incident information prepared for public dissemination.
Tribal Public Safety Dispatch	ATTP Tribal Coordination Website	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Tribal Public Safety Dispatch	BIA Western Regional Website	alert notification	Existing	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
Tribal Public Safety Dispatch	County 911 PSAPs	incident information for public	Existing	Report of current desensitized incident information prepared for public dissemination.
Tribal Public Safety Dispatch	County 911 PSAPs	incident notification response	Existing	Interactive acknowledgement and verification of the incident information received, requests for additional information, and general information on incident response status.
Tribal Public Safety Dispatch	County EMC-EOC	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Tribal Public Safety Dispatch	County EMC-EOC	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Tribal Public Safety Dispatch	County EMC-EOC	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Tribal Public Safety Dispatch	County EMC-EOC	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Tribal Public Safety Dispatch	County EMC-EOC	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
Tribal Public Safety Dispatch	County EMC-EOC	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Tribal Public Safety Dispatch	County EMC-EOC	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Tribal Public Safety Dispatch	County EMC-EOC	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Tribal Public Safety Dispatch	County EMC-EOC	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Tribal Public Safety Dispatch	DEMA CRT - HazMat Response Team	alert notification	Planned	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
Tribal Public Safety Dispatch	DEMA CRT - HazMat Response Team	alert notification coordination	Planned	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Tribal Public Safety Dispatch	DEMA CRT - HazMat Response Team	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Tribal Public Safety Dispatch	DEMA CRT - HazMat Response Team	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
Tribal Public Safety Dispatch	DEMA CRT - HazMat Response Team	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
Tribal Public Safety Dispatch	DEMA CRT - HazMat Response Team	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Tribal Public Safety Dispatch	DEMA CRT - HazMat Response Team	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Tribal Public Safety Dispatch	DEMA CRT - HazMat Response Team	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Tribal Public Safety Dispatch	DEMA CRT - HazMat Response Team	resource request	Planned	A request for resources to implement special traffic control measures, assist in clean up, verify an incident, etc. The request may poll for resource availability or request pre-staging, staging, or immediate deployment of resources. Resources may be explicitly requested or a service may be requested and the specific resource deployment may be determined by the responding agency.
Tribal Public Safety Dispatch	DEMA Enforcement	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Tribal Public Safety Dispatch	DEMA Enforcement	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Tribal Public Safety Dispatch	DEMA Enforcement	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Tribal Public Safety Dispatch	DEMA Enforcement	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Tribal Public Safety Dispatch	DEMA Enforcement	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
Tribal Public Safety Dispatch	DEMA Enforcement	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Tribal Public Safety Dispatch	DEMA Enforcement	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Tribal Public Safety Dispatch	DEMA Enforcement	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Tribal Public Safety Dispatch	DEMA Enforcement	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Tribal Public Safety Dispatch	DEMA SEOC Arizona DEM Military Affairs	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Tribal Public Safety Dispatch	DEMA SEOC Arizona DEM Military Affairs	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Tribal Public Safety Dispatch	DEMA SEOC Arizona DEM Military Affairs	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Tribal Public Safety Dispatch	DEMA SEOC Arizona DEM Military Affairs	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Tribal Public Safety Dispatch	DEMA SEOC Arizona DEM Military Affairs	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
Tribal Public Safety Dispatch	DEMA SEOC Arizona DEM Military Affairs	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Tribal Public Safety Dispatch	DEMA SEOC Arizona DEM Military Affairs	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Tribal Public Safety Dispatch	DEMA SEOC Arizona DEM Military Affairs	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
Tribal Public Safety Dispatch	DEMA SEOC Arizona DEM Military Affairs	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Tribal Public Safety Dispatch	DEMA WebEOC System	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Tribal Public Safety Dispatch	DEMA WebEOC System	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Tribal Public Safety Dispatch	DEMA WebEOC System	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Tribal Public Safety Dispatch	DEMA WebEOC System	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Tribal Public Safety Dispatch	DEMA WebEOC System	incident information for public	Existing	Report of current desensitized incident information prepared for public dissemination.
Tribal Public Safety Dispatch	DEMA WebEOC System	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
Tribal Public Safety Dispatch	DEMA WebEOC System	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Tribal Public Safety Dispatch	DEMA WebEOC System	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Tribal Public Safety Dispatch	DEMA WebEOC System	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
Tribal Public Safety Dispatch	DEMA WebEOC System	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Tribal Public Safety Dispatch	DPS Central Communications Center	alert notification	Existing	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
Tribal Public Safety Dispatch	DPS Central Communications Center	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Tribal Public Safety Dispatch	DPS Central Communications Center	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Tribal Public Safety Dispatch	DPS Central Communications Center	emergency traffic control request	Existing	Special request to preempt the current traffic control strategy in effect at one or more signalized intersections or highway segments, activate traffic control and closure systems such as gates and barriers, activate safeguard systems, or use driver information systems. For example, this flow can request all signals to red-flash, request a progression of traffic control preemptions along an emergency vehicle route, request a specific evacuation traffic control plan, request activation of a road closure barrier system, or place a public safety or emergency-related message on a dynamic message sign.
Tribal Public Safety Dispatch	DPS Central Communications Center	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Tribal Public Safety Dispatch	DPS Central Communications Center	evacuation information	Existing	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
Tribal Public Safety Dispatch	DPS Central Communications Center	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Tribal Public Safety Dispatch	DPS Central Communications Center	incident information	Existing	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
Tribal Public Safety Dispatch	DPS Central Communications Center	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Tribal Public Safety Dispatch	DPS Central Communications Center	incident response coordination	Existing	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Tribal Public Safety Dispatch	DPS Central Communications Center	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
Tribal Public Safety Dispatch	DPS Central Communications Center	remote surveillance control	Planned	The control commands used to remotely operate another center's sensors or surveillance equipment so that roadside surveillance assets can be shared by more than one agency.
Tribal Public Safety Dispatch	DPS Central Communications Center	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Tribal Public Safety Dispatch	DPS Central Communications Center	resource request	Planned	A request for resources to implement special traffic control measures, assist in clean up, verify an incident, etc. The request may poll for resource availability or request pre-staging, staging, or immediate deployment of resources. Resources may be explicitly requested or a service may be requested and the specific resource deployment may be determined by the responding agency.
Tribal Public Safety Dispatch	DPS Central Communications Center	threat information	Existing	Threats regarding transportation infrastructure, facilities, or systems detected by a variety of methods (sensors, surveillance, threat analysis of advisories from outside agencies, etc.
Tribal Public Safety Dispatch	DPS Central Communications Center	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
Tribal Public Safety Dispatch	DPS Central Communications Center	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Tribal Public Safety Dispatch	DPS Console Interface (Other LE)	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Tribal Public Safety Dispatch	DPS Console Interface (Other LE)	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Tribal Public Safety Dispatch	DPS Console Interface (Other LE)	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Tribal Public Safety Dispatch	DPS Console Interface (Other LE)	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Tribal Public Safety Dispatch	DPS Console Interface (Other LE)	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
Tribal Public Safety Dispatch	DPS Console Interface (Other LE)	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Tribal Public Safety Dispatch	DPS Console Interface (Other LE)	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Tribal Public Safety Dispatch	DPS Console Interface (Other LE)	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
Tribal Public Safety Dispatch	DPS Console Interface (Other LE)	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Tribal Public Safety Dispatch	DPS Data Archive	emergency archive data	Existing	Logged emergency information including information that characterizes identified incidents (routine highway incidents through disasters), corresponding incident response information, evacuation information, surveillance data, threat data, and resource information. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
Tribal Public Safety Dispatch	Fleet Management Systems	hazmat information request	Existing	Request for information about a particular hazmat load.
Tribal Public Safety Dispatch	Independent School District Bus Dispatch	alert notification	Existing	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Tribal Public Safety Dispatch	Independent School District Bus Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Tribal Public Safety Dispatch	Independent School District Bus Dispatch	emergency transit service request	Existing	Request to modify transit service and fare schedules to address emergencies, including requests for transit services to evacuate people from and/or deploy response agency personnel to an emergency scene. The request may poll for resource availability or request pre-staging, staging, or immediate dispatch of transit resources.
Tribal Public Safety Dispatch	Independent School District Bus Dispatch	evacuation information	Existing	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
Tribal Public Safety Dispatch	Independent School District Bus Dispatch	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
Tribal Public Safety Dispatch	Independent School District Bus Dispatch	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
Tribal Public Safety Dispatch	Independent School District Bus Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Tribal Public Safety Dispatch	Local Dial-A-Ride Transit Dispatchers	alert notification	Existing	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
Tribal Public Safety Dispatch	Local Dial-A-Ride Transit Dispatchers	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Tribal Public Safety Dispatch	Local Dial-A-Ride Transit Dispatchers	emergency transit service request	Planned	Request to modify transit service and fare schedules to address emergencies, including requests for transit services to evacuate people from and/or deploy response agency personnel to an emergency scene. The request may poll for resource availability or request pre-staging, staging, or immediate dispatch of transit resources.
Tribal Public Safety Dispatch	Local Dial-A-Ride Transit Dispatchers	evacuation information	Existing	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
Tribal Public Safety Dispatch	Local Dial-A-Ride Transit Dispatchers	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
Tribal Public Safety Dispatch	Local Dial-A-Ride Transit Dispatchers	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
Tribal Public Safety Dispatch	Local Dial-A-Ride Transit Dispatchers	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Tribal Public Safety Dispatch	Local Print and Broadcast Media	incident information for media	Existing	Report of current desensitized incident information prepared for public dissemination through the media.
Tribal Public Safety Dispatch	Maricopa County EOC	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Tribal Public Safety Dispatch	Maricopa County EOC	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Tribal Public Safety Dispatch	Maricopa County EOC	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Tribal Public Safety Dispatch	Maricopa County EOC	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Tribal Public Safety Dispatch	Maricopa County EOC	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
Tribal Public Safety Dispatch	Maricopa County EOC	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Tribal Public Safety Dispatch	Maricopa County EOC	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Tribal Public Safety Dispatch	Maricopa County EOC	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
Tribal Public Safety Dispatch	Maricopa County EOC	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Tribal Public Safety Dispatch	POE Data Archive	emergency archive data	Planned	Logged emergency information including information that characterizes identified incidents (routine highway incidents through disasters), corresponding incident response information, evacuation information, surveillance data, threat data, and resource information. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
Tribal Public Safety Dispatch	Public Private Traveler Information	alert notification	Planned	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
Tribal Public Safety Dispatch	Public Private Traveler Information	evacuation information	Planned	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
Tribal Public Safety Dispatch	Public Private Traveler Information	incident information for public	Planned	Report of current desensitized incident information prepared for public dissemination.
Tribal Public Safety Dispatch	Public Private Traveler Information	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Tribal Public Safety Dispatch	Railroad Operations Center	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Tribal Public Safety Dispatch	Social Media and Networking	alert notification for social media	Planned	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public via social media. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This version of the flow contains only publicly available information and is structured and formatted for publication on specific social media platforms and other public-facing sites.
Tribal Public Safety Dispatch	State Universities Data Archives	emergency archive data	Existing	Logged emergency information including information that characterizes identified incidents (routine highway incidents through disasters), corresponding incident response information, evacuation information, surveillance data, threat data, and resource information. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
Tribal Public Safety Dispatch	Transit Providers Dispatch (Public and Private)	alert notification	Existing	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
Tribal Public Safety Dispatch	Transit Providers Dispatch (Public and Private)	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Tribal Public Safety Dispatch	Transit Providers Dispatch (Public and Private)	emergency transit service request	Planned	Request to modify transit service and fare schedules to address emergencies, including requests for transit services to evacuate people from and/or deploy response agency personnel to an emergency scene. The request may poll for resource availability or request pre-staging, staging, or immediate dispatch of transit resources.
Tribal Public Safety Dispatch	Transit Providers Dispatch (Public and Private)	evacuation information	Existing	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Tribal Public Safety Dispatch	Transit Providers Dispatch (Public and Private)	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
Tribal Public Safety Dispatch	Transit Providers Dispatch (Public and Private)	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
Tribal Public Safety Dispatch	Transit Providers Dispatch (Public and Private)	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Tribal Public Safety Dispatch	Tribal Data Archive	emergency archive data	Planned	Logged emergency information including information that characterizes identified incidents (routine highway incidents through disasters), corresponding incident response information, evacuation information, surveillance data, threat data, and resource information. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
Tribal Public Safety Dispatch	Tribal MCO Dispatch	alert notification	Existing	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
Tribal Public Safety Dispatch	Tribal MCO Dispatch	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Tribal Public Safety Dispatch	Tribal MCO Dispatch	evacuation information	Existing	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Tribal Public Safety Dispatch	Tribal MCO Dispatch	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
Tribal Public Safety Dispatch	Tribal MCO Dispatch	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
Tribal Public Safety Dispatch	Tribal MCO Dispatch	maint and constr resource request	Planned	Request for road maintenance and construction resources that can be used in the diversion of traffic (cones, portable signs), clearance of a road hazard, repair of ancillary damage, or any other incident response. The request may poll for resource availability or request pre-staging, staging, or immediate dispatch of resources.
Tribal Public Safety Dispatch	Tribal MCO Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Tribal Public Safety Dispatch	Tribal Police and Fire Vehicles	emergency dispatch requests	Planned	Emergency vehicle dispatch instructions including incident location and available information concerning the incident.
Tribal Public Safety Dispatch	Tribal Police and Fire Vehicles	suggested route	Planned	Suggested route for a dispatched emergency or maintenance vehicle that may reflect current network conditions and the additional routing options available to en route emergency or maintenance vehicles that are not available to the general public.
Tribal Public Safety Dispatch	Tribal TMC-TOC-TIC	alert notification	Planned	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
Tribal Public Safety Dispatch	Tribal TMC-TOC-TIC	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Tribal Public Safety Dispatch	Tribal TMC-TOC-TIC	emergency traffic control request	Planned	Special request to preempt the current traffic control strategy in effect at one or more signalized intersections or highway segments, activate traffic control and closure systems such as gates and barriers, activate safeguard systems, or use driver information systems. For example, this flow can request all signals to red-flash, request a progression of traffic control preemptions along an emergency vehicle route, request a specific evacuation traffic control plan, request activation of a road closure barrier system, or place a public safety or emergency-related message on a dynamic message sign.
Tribal Public Safety Dispatch	Tribal TMC-TOC-TIC	evacuation information	Planned	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
Tribal Public Safety Dispatch	Tribal TMC-TOC-TIC	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
Tribal Public Safety Dispatch	Tribal TMC-TOC-TIC	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
Tribal Public Safety Dispatch	Tribal TMC-TOC-TIC	resource request	Planned	A request for resources to implement special traffic control measures, assist in clean up, verify an incident, etc. The request may poll for resource availability or request pre-staging, staging, or immediate deployment of resources. Resources may be explicitly requested or a service may be requested and the specific resource deployment may be determined by the responding agency.
Tribal Public Safety Dispatch	Tribal TMC-TOC-TIC	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Tribal Public Safety Dispatch	Wide Area Alerting Systems	alert notification	Planned	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
Tribal Public Safety Dispatch	Wide Area Alerting Systems	evacuation information	Planned	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
Tribal Public Safety Dispatch	Wide Area Alerting Systems	incident information for public	Planned	Report of current desensitized incident information prepared for public dissemination.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Tribal Public Safety Dispatch	Wide Area Alerting Systems	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Tribal TMC-TOC-TIC	ADOT DEOC-Dept EM Ops Center	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Tribal TMC-TOC-TIC	ADOT DEOC-Dept EM Ops Center	emergency traffic control information	Planned	Status of a special traffic control strategy or system activation implemented in response to an emergency traffic control request, a request for emergency access routes, a request for evacuation, a request to activate closure systems, a request to employ driver information systems to support public safety objectives, or other special requests. Identifies the selected traffic control strategy and system control status.
Tribal TMC-TOC-TIC	ADOT DEOC-Dept EM Ops Center	emergency traffic coordination	Planned	Coordination supporting disaster response including evacuation and reentry. Includes coordination of special traffic control strategies that support efficient evacuation and reentry while protecting and optimizing movement of response vehicles and other resources responding to the emergency.
Tribal TMC-TOC-TIC	ADOT DEOC-Dept EM Ops Center	resource deployment status	Planned	Status of resource deployment identifying the resources (vehicles, equipment, materials, and personnel) available and their current status. General resource inventory information and specific status of deployed resources may be included.
Tribal TMC-TOC-TIC	ADOT DEOC-Dept EM Ops Center	road network conditions	Planned	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.
Tribal TMC-TOC-TIC	ADOT DEOC-Dept EM Ops Center	road network status assessment	Planned	Assessment of damage sustained by the road network including location and extent of the damage, estimate of remaining capacity, required closures, alternate routes, necessary restrictions, and time frame for repair and recovery.
Tribal TMC-TOC-TIC	ADOT HazMat Response Team	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Tribal TMC-TOC-TIC	ADOT HazMat Response Team	emergency traffic control information	Planned	Status of a special traffic control strategy or system activation implemented in response to an emergency traffic control request, a request for emergency access routes, a request for evacuation, a request to activate closure systems, a request to employ driver information systems to support public safety objectives, or other special requests. Identifies the selected traffic control strategy and system control status.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Tribal TMC-TOC-TIC	ADOT HazMat Response Team	emergency traffic coordination	Planned	Coordination supporting disaster response including evacuation and reentry. Includes coordination of special traffic control strategies that support efficient evacuation and reentry while protecting and optimizing movement of response vehicles and other resources responding to the emergency.
Tribal TMC-TOC-TIC	ADOT HazMat Response Team	resource deployment status	Planned	Status of resource deployment identifying the resources (vehicles, equipment, materials, and personnel) available and their current status. General resource inventory information and specific status of deployed resources may be included.
Tribal TMC-TOC-TIC	ADOT HazMat Response Team	road network conditions	Planned	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.
Tribal TMC-TOC-TIC	ADOT HazMat Response Team	road network status assessment	Planned	Assessment of damage sustained by the road network including location and extent of the damage, estimate of remaining capacity, required closures, alternate routes, necessary restrictions, and time frame for repair and recovery.
Tribal TMC-TOC-TIC	ADOT TOC and EMC	alert status	Planned	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
Tribal TMC-TOC-TIC	ADOT TOC and EMC	device control request	Planned	Request for device control action
Tribal TMC-TOC-TIC	ADOT TOC and EMC	device data	Planned	Data from detectors, environmental sensor stations, roadside equipment, and traffic control devices, including device inventory information.
Tribal TMC-TOC-TIC	ADOT TOC and EMC	device status	Planned	Status information from devices
Tribal TMC-TOC-TIC	ADOT TOC and EMC	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Tribal TMC-TOC-TIC	ADOT TOC and EMC	emergency traffic control information	Planned	Status of a special traffic control strategy or system activation implemented in response to an emergency traffic control request, a request for emergency access routes, a request for evacuation, a request to activate closure systems, a request to employ driver information systems to support public safety objectives, or other special requests. Identifies the selected traffic control strategy and system control status.
Tribal TMC-TOC-TIC	ADOT TOC and EMC	emergency traffic coordination	Planned	Coordination supporting disaster response including evacuation and reentry. Includes coordination of special traffic control strategies that support efficient evacuation and reentry while protecting and optimizing movement of response vehicles and other resources responding to the emergency.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Tribal TMC-TOC-TIC	ADOT TOC and EMC	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
Tribal TMC-TOC-TIC	ADOT TOC and EMC	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
Tribal TMC-TOC-TIC	ADOT TOC and EMC	resource deployment status	Planned	Status of resource deployment identifying the resources (vehicles, equipment, materials, and personnel) available and their current status. General resource inventory information and specific status of deployed resources may be included.
Tribal TMC-TOC-TIC	ADOT TOC and EMC	resource request	Planned	A request for resources to implement special traffic control measures, assist in clean up, verify an incident, etc. The request may poll for resource availability or request pre-staging, staging, or immediate deployment of resources. Resources may be explicitly requested or a service may be requested and the specific resource deployment may be determined by the responding agency.
Tribal TMC-TOC-TIC	ADOT TOC and EMC	road network conditions	Planned	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.
Tribal TMC-TOC-TIC	ADOT TOC and EMC	road network environmental situation data	Planned	Aggregated environmental situation data collected from vehicles and other sources for the road network. Aggregated information would include measured air temperature, exterior light status, wiper status, sun sensor status, rain sensor status, traction control status, ALB status, and other collected vehicle system status and sensor information for the region.
Tribal TMC-TOC-TIC	ADOT TOC and EMC	road network status assessment	Planned	Assessment of damage sustained by the road network including location and extent of the damage, estimate of remaining capacity, required closures, alternate routes, necessary restrictions, and time frame for repair and recovery.
Tribal TMC-TOC-TIC	ADOT TOC and EMC	traffic images	Planned	High fidelity, real-time traffic images suitable for surveillance monitoring by the operator or for use in machine vision applications. This flow includes the images. Meta data that describes the images is contained in another flow.
Tribal TMC-TOC-TIC	ATTP Tribal Coordination Website	alternate mode information	Planned	Schedule information for alternate mode transportation providers such as air, ferry, and passenger-carrying heavy rail. This also includes details of incidents and other service disruptions that have occurred in the alternative mode. This also includes measures of service demand that supports assessment of their impact on the road network.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Tribal TMC-TOC-TIC	ATTP Tribal Coordination Website	emergency traveler information	Planned	Public notification of an emergency such as a natural or man-made disaster, civil emergency, or child abduction. This flow also includes evacuation information including evacuation instructions, evacuation zones, recommended evacuation times, tailored evacuation routes and destinations, traffic and road conditions along the evacuation routes, traveler services and shelter information, and reentry times and instructions.
Tribal TMC-TOC-TIC	ATTP Tribal Coordination Website	incident information for public	Planned	Report of current desensitized incident information prepared for public dissemination.
Tribal TMC-TOC-TIC	ATTP Tribal Coordination Website	parking information	Planned	General parking information and status, including current parking availability, parking pricing, and parking space availability information, including features like number and type of electric charging spots.
Tribal TMC-TOC-TIC	ATTP Tribal Coordination Website	road network conditions	Planned	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.
Tribal TMC-TOC-TIC	ATTP Tribal Coordination Website	traffic control information	Planned	Represents the flow of traffic control and status information between centers. This is reporting only, not actual control. This specifically includes the current state of any demand management strategies that have been implemented.
Tribal TMC-TOC-TIC	ATTP Tribal Coordination Website	traffic images	Planned	High fidelity, real-time traffic images suitable for surveillance monitoring by the operator or for use in machine vision applications. This flow includes the images. Meta data that describes the images is contained in another flow.
Tribal TMC-TOC-TIC	ATTP Tribal Coordination Website	transit service information	Planned	Transit service information including routes, schedules, and fare information as well as dynamic transit schedule adherence and transit vehicle location information.
Tribal TMC-TOC-TIC	BIA Western Regional Website	emergency traveler information	Planned	Public notification of an emergency such as a natural or man-made disaster, civil emergency, or child abduction. This flow also includes evacuation information including evacuation instructions, evacuation zones, recommended evacuation times, tailored evacuation routes and destinations, traffic and road conditions along the evacuation routes, traveler services and shelter information, and reentry times and instructions.
Tribal TMC-TOC-TIC	BIA Western Regional Website	road network conditions	Planned	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.
Tribal TMC-TOC-TIC	BIA Western Regional Website	traffic control information	Planned	Represents the flow of traffic control and status information between centers. This is reporting only, not actual control. This specifically includes the current state of any demand management strategies that have been implemented.
Tribal TMC-TOC-TIC	BIA Western Regional Website	traffic images	Planned	High fidelity, real-time traffic images suitable for surveillance monitoring by the operator or for use in machine vision applications. This flow includes the images. Meta data that describes the images is contained in another flow.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Tribal TMC-TOC-TIC	DEMA SEOC Arizona DEM Military Affairs	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Tribal TMC-TOC-TIC	DEMA SEOC Arizona DEM Military Affairs	emergency traffic control information	Planned	Status of a special traffic control strategy or system activation implemented in response to an emergency traffic control request, a request for emergency access routes, a request for evacuation, a request to activate closure systems, a request to employ driver information systems to support public safety objectives, or other special requests. Identifies the selected traffic control strategy and system control status.
Tribal TMC-TOC-TIC	DEMA SEOC Arizona DEM Military Affairs	resource deployment status	Planned	Status of resource deployment identifying the resources (vehicles, equipment, materials, and personnel) available and their current status. General resource inventory information and specific status of deployed resources may be included.
Tribal TMC-TOC-TIC	DEMA SEOC Arizona DEM Military Affairs	road network conditions	Planned	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.
Tribal TMC-TOC-TIC	DEMA SEOC Arizona DEM Military Affairs	road network status assessment	Planned	Assessment of damage sustained by the road network including location and extent of the damage, estimate of remaining capacity, required closures, alternate routes, necessary restrictions, and time frame for repair and recovery.
Tribal TMC-TOC-TIC	Independent School District Bus Dispatch	road network conditions	Planned	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.
Tribal TMC-TOC-TIC	Local Dial-A-Ride Transit Dispatchers	road network conditions	Planned	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.
Tribal TMC-TOC-TIC	Local Print and Broadcast Media	traffic images	Planned	High fidelity, real-time traffic images suitable for surveillance monitoring by the operator or for use in machine vision applications. This flow includes the images. Meta data that describes the images is contained in another flow.
Tribal TMC-TOC-TIC	Local Print and Broadcast Media	traffic information for media	Planned	Report of traffic conditions including traffic incident reports for public dissemination through the media. The reports may also include information on diversions and alternate routes, closures, and special traffic restrictions in effect.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Tribal TMC-TOC-TIC	Personal Information Devices for Travelers	emergency traveler information	Planned	Public notification of an emergency such as a natural or man-made disaster, civil emergency, or child abduction. This flow also includes evacuation information including evacuation instructions, evacuation zones, recommended evacuation times, tailored evacuation routes and destinations, traffic and road conditions along the evacuation routes, traveler services and shelter information, and reentry times and instructions.
Tribal TMC-TOC-TIC	Public Private Traveler Information	emergency traveler information	Planned	Public notification of an emergency such as a natural or man-made disaster, civil emergency, or child abduction. This flow also includes evacuation information including evacuation instructions, evacuation zones, recommended evacuation times, tailored evacuation routes and destinations, traffic and road conditions along the evacuation routes, traveler services and shelter information, and reentry times and instructions.
Tribal TMC-TOC-TIC	Public Private Traveler Information	traffic control information	Planned	Represents the flow of traffic control and status information between centers. This is reporting only, not actual control. This specifically includes the current state of any demand management strategies that have been implemented.
Tribal TMC-TOC-TIC	Transit Providers Dispatch (Public and Private)	road network conditions	Planned	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.
Tribal TMC-TOC-TIC	Tribal Data Archive	traffic archive data	Planned	Information describing the use and vehicle composition on transportation facilities and the traffic control strategies employed. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
Tribal TMC-TOC-TIC	Tribal Data Archive	traveler archive data	Planned	Data associated with traveler information services including service requests, facility usage, rideshare, routing, and traveler payment transaction data. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
Tribal TMC-TOC-TIC	Tribal ITS Field Equipment	passive vehicle monitoring control	Planned	Control commands used to control detection systems that rely on infrastructure-based identification of individual vehicles to measure travel times and other related measures by identifying the same vehicle at different points in the network. Related technologies include Bluetooth readers and license plate recognition systems.
Tribal TMC-TOC-TIC	Tribal ITS Field Equipment	roadway dynamic signage data	Planned	Information used to initialize, configure, and control dynamic message signs. This flow can provide message content and delivery attributes, local message store maintenance requests, control mode commands, status queries, and all other commands and associated parameters that support remote management of these devices.
Tribal TMC-TOC-TIC	Tribal ITS Field Equipment	signal control commands	Planned	Control of traffic signal controllers or field masters including clock synchronization.
Tribal TMC-TOC-TIC	Tribal ITS Field Equipment	signal control device configuration	Planned	Data used to configure traffic signal control equipment including local controllers and system masters.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Tribal TMC-TOC-TIC	Tribal ITS Field Equipment	signal control plans	Planned	Traffic signal timing parameters including minimum green time and interval durations for basic operation and cycle length, splits, offset, phase sequence, etc. for coordinated systems.
Tribal TMC-TOC-TIC	Tribal ITS Field Equipment	signal system configuration	Planned	Data used to configure traffic signal systems including configuring control sections and mode of operation (time based or traffic responsive).
Tribal TMC-TOC-TIC	Tribal ITS Field Equipment	traffic detector control	Planned	Information used to configure and control traffic detector systems such as inductive loop detectors and machine vision sensors.
Tribal TMC-TOC-TIC	Tribal ITS Field Equipment	video surveillance control	Planned	Information used to configure and control video surveillance systems.
Tribal TMC-TOC-TIC	Tribal MCO Dispatch	equipment maintenance request	Planned	Identification of field equipment requiring repair and known information about the associated faults.
Tribal TMC-TOC-TIC	Tribal MCO Dispatch	maint and constr resource request	Planned	Request for road maintenance and construction resources that can be used in the diversion of traffic (cones, portable signs), clearance of a road hazard, repair of ancillary damage, or any other incident response. The request may poll for resource availability or request pre-staging, staging, or immediate dispatch of resources.
Tribal TMC-TOC-TIC	Tribal MCO Dispatch	road network conditions	Planned	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.
Tribal TMC-TOC-TIC	Tribal MCO Dispatch	road network status assessment	Planned	Assessment of damage sustained by the road network including location and extent of the damage, estimate of remaining capacity, required closures, alternate routes, necessary restrictions, and time frame for repair and recovery.
Tribal TMC-TOC-TIC	Tribal MCO Dispatch	traffic images	Planned	High fidelity, real-time traffic images suitable for surveillance monitoring by the operator or for use in machine vision applications. This flow includes the images. Meta data that describes the images is contained in another flow.
Tribal TMC-TOC-TIC	Tribal Public Safety Dispatch	alert status	Planned	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
Tribal TMC-TOC-TIC	Tribal Public Safety Dispatch	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Tribal TMC-TOC-TIC	Tribal Public Safety Dispatch	emergency traffic control information	Planned	Status of a special traffic control strategy or system activation implemented in response to an emergency traffic control request, a request for emergency access routes, a request for evacuation, a request to activate closure systems, a request to employ driver information systems to support public safety objectives, or other special requests. Identifies the selected traffic control strategy and system control status.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Tribal TMC-TOC-TIC	Tribal Public Safety Dispatch	resource deployment status	Planned	Status of resource deployment identifying the resources (vehicles, equipment, materials, and personnel) available and their current status. General resource inventory information and specific status of deployed resources may be included.
Tribal TMC-TOC-TIC	Tribal Public Safety Dispatch	road network conditions	Planned	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.
Tribal TMC-TOC-TIC	Tribal Public Safety Dispatch	road network status assessment	Planned	Assessment of damage sustained by the road network including location and extent of the damage, estimate of remaining capacity, required closures, alternate routes, necessary restrictions, and time frame for repair and recovery.
Tribal TMC-TOC-TIC	Tribal Public Safety Dispatch	traffic images	Planned	High fidelity, real-time traffic images suitable for surveillance monitoring by the operator or for use in machine vision applications. This flow includes the images. Meta data that describes the images is contained in another flow.
Tribal TMC-TOC-TIC	Tribal Transit Centers	road network conditions	Planned	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.
Tribal TMC-TOC-TIC	Tribal Transit Centers	traffic images	Planned	High fidelity, real-time traffic images suitable for surveillance monitoring by the operator or for use in machine vision applications. This flow includes the images. Meta data that describes the images is contained in another flow.
Tribal TMC-TOC-TIC	Wide Area Alerting Systems	alternate mode information	Planned	Schedule information for alternate mode transportation providers such as air, ferry, and passenger-carrying heavy rail. This also includes details of incidents and other service disruptions that have occurred in the alternative mode. This also includes measures of service demand that supports assessment of their impact on the road network.
Tribal TMC-TOC-TIC	Wide Area Alerting Systems	emergency traveler information	Planned	Public notification of an emergency such as a natural or man-made disaster, civil emergency, or child abduction. This flow also includes evacuation information including evacuation instructions, evacuation zones, recommended evacuation times, tailored evacuation routes and destinations, traffic and road conditions along the evacuation routes, traveler services and shelter information, and reentry times and instructions.
Tribal TMC-TOC-TIC	Wide Area Alerting Systems	incident information for public	Planned	Report of current desensitized incident information prepared for public dissemination.
Tribal TMC-TOC-TIC	Wide Area Alerting Systems	parking information	Planned	General parking information and status, including current parking availability, parking pricing, and parking space availability information, including features like number and type of electric charging spots.
Tribal TMC-TOC-TIC	Wide Area Alerting Systems	road network conditions	Planned	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Tribal TMC-TOC-TIC	Wide Area Alerting Systems	traffic control information	Planned	Represents the flow of traffic control and status information between centers. This is reporting only, not actual control. This specifically includes the current state of any demand management strategies that have been implemented.
Tribal TMC-TOC-TIC	Wide Area Alerting Systems	traffic images	Planned	High fidelity, real-time traffic images suitable for surveillance monitoring by the operator or for use in machine vision applications. This flow includes the images. Meta data that describes the images is contained in another flow.
Tribal TMC-TOC-TIC	Wide Area Alerting Systems	transit service information	Planned	Transit service information including routes, schedules, and fare information as well as dynamic transit schedule adherence and transit vehicle location information.
Tribal Transit Centers	ADOT DEOC-Dept EM Ops Center	alert status	Planned	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
Tribal Transit Centers	ADOT DEOC-Dept EM Ops Center	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Tribal Transit Centers	ADOT DEOC-Dept EM Ops Center	emergency transit schedule information	Planned	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
Tribal Transit Centers	ADOT DEOC-Dept EM Ops Center	emergency transit service response	Planned	Response indicating changes to transit service, fares, and/or restrictions that will be made and status of transit resources to be deployed to support emergency response and/or evacuation.
Tribal Transit Centers	ADOT DEOC-Dept EM Ops Center	transit emergency data	Planned	Initial notification of transit emergency at a transit stop or on transit vehicles and further coordination as additional details become available and the response is coordinated.
Tribal Transit Centers	ADOT DEOC-Dept EM Ops Center	transit system status assessment	Planned	Assessment of damage sustained by the public transportation system including location and extent of the damage, current operational status including an estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Tribal Transit Centers	ATTP Tribal Coordination Website	emergency transit schedule information	Planned	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
Tribal Transit Centers	BIA Western Regional Website	emergency transit schedule information	Planned	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
Tribal Transit Centers	Cities and Towns Transit Dispatch	transit fare coordination	Planned	Fare and pricing information shared between local/regional transit organizations.
Tribal Transit Centers	Cities and Towns Transit Dispatch	transit service coordination	Planned	Schedule coordination or AVL information shared between local/regional transit organizations. This includes coordination of connections and control parameters between transit properties as well as coordination of transit-related maintenance activities.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Tribal Transit Centers	County Transit Kiosks	authorization response	Planned	Notification of status of authorization request.
Tribal Transit Centers	County Transit Kiosks	transit traveler information	Planned	Transit information prepared to support transit users and other travelers. It contains transit schedules, real-time arrival information, fare schedules, alerts and advisories, and general transit service information.
Tribal Transit Centers	DEMA SEOC Arizona DEM Military Affairs	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Tribal Transit Centers	DEMA SEOC Arizona DEM Military Affairs	emergency transit schedule information	Planned	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
Tribal Transit Centers	DEMA SEOC Arizona DEM Military Affairs	emergency transit service response	Planned	Response indicating changes to transit service, fares, and/or restrictions that will be made and status of transit resources to be deployed to support emergency response and/or evacuation.
Tribal Transit Centers	DEMA SEOC Arizona DEM Military Affairs	transit system status assessment	Planned	Assessment of damage sustained by the public transportation system including location and extent of the damage, current operational status including an estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Tribal Transit Centers	Financial Institution	payment request	Planned	Request for payment from financial institution or related financial service requests (e.g., balance inquiry)
Tribal Transit Centers	Local Dial-A-Ride Transit Dispatchers	transit fare coordination	Planned	Fare and pricing information shared between local/regional transit organizations.
Tribal Transit Centers	Local Dial-A-Ride Transit Dispatchers	transit service coordination	Planned	Schedule coordination or AVL information shared between local/regional transit organizations. This includes coordination of connections and control parameters between transit properties as well as coordination of transit-related maintenance activities.
Tribal Transit Centers	NAIPTA (dba Mountain Line) Bus Arrival System	authorization response	Planned	Notification of status of authorization request.
Tribal Transit Centers	NAIPTA (dba Mountain Line) Bus Arrival System	fare management information	Planned	Transit fare information and transaction data used to manage transit fare processing.
Tribal Transit Centers	NAIPTA (dba Mountain Line) Bus Arrival System	transit traveler information	Planned	Transit information prepared to support transit users and other travelers. It contains transit schedules, real-time arrival information, fare schedules, alerts and advisories, and general transit service information.
Tribal Transit Centers	NAIPTA (dba Mountain Line) Paratransit	transit fare coordination	Planned	Fare and pricing information shared between local/regional transit organizations.
Tribal Transit Centers	NAIPTA (dba Mountain Line) Paratransit	transit service coordination	Planned	Schedule coordination or AVL information shared between local/regional transit organizations. This includes coordination of connections and control parameters between transit properties as well as coordination of transit-related maintenance activities.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Tribal Transit Centers	NAIPTA (dba Mountain Line) Transit Management Center	transit fare coordination	Planned	Fare and pricing information shared between local/regional transit organizations.
Tribal Transit Centers	NAIPTA (dba Mountain Line) Transit Management Center	transit service coordination	Planned	Schedule coordination or AVL information shared between local/regional transit organizations. This includes coordination of connections and control parameters between transit properties as well as coordination of transit-related maintenance activities.
Tribal Transit Centers	NAIPTA (dba Mountain Line) Transit Management Center	transit traveler information coordination	Planned	Transit schedules, real-time arrival information, fare schedules, and general transit service information shared between transit organizations to support transit traveler information systems.
Tribal Transit Centers	NAIPTA (dba Mountain Line) Website and FLGRide	transit and fare schedules	Planned	Transit service information including routes, schedules, and fare information. This also includes on-demand service information.
Tribal Transit Centers	NAIPTA (dba Mountain Line) Website and FLGRide	transit fare information	Planned	Information provided by transit management that supports fare payment transactions.
Tribal Transit Centers	NAIPTA (dba Mountain Line) Website and FLGRide	transit trip plan	Planned	An origin-destination transit trip that may involve multiple modes and connections.
Tribal Transit Centers	Payment Administration Center	account updates	Planned	Updates to an account, such as purchases, uses, cancellation, secureID changes or similar material changes to account information.
Tribal Transit Centers	Payment Administration Center	smart card reconciliation	Planned	Detailed list of charges of the form charge/transport provider, taken from a smart card that need to be applied to the listed providers.
Tribal Transit Centers	Personal Information Devices for Travelers	personal transit information	Planned	General and personalized transit information for a particular fixed route, flexible route, or paratransit system.
Tribal Transit Centers	Personal Information Devices for Travelers	traveler payment request	Planned	Request for information supporting payments. For fee structures that include incentives, the request may support either an account debit or an account credit or reimbursement.
Tribal Transit Centers	Private Transit Routing Service Provider	authorization response	Planned	Notification of status of authorization request.
Tribal Transit Centers	Private Transit Routing Service Provider	fare management information	Planned	Transit fare information and transaction data used to manage transit fare processing.
Tribal Transit Centers	Private Transit Routing Service Provider	personal transit information	Planned	General and personalized transit information for a particular fixed route, flexible route, or paratransit system.
Tribal Transit Centers	Private Transit Routing Service Provider	transit traveler information	Planned	Transit information prepared to support transit users and other travelers. It contains transit schedules, real-time arrival information, fare schedules, alerts and advisories, and general transit service information.
Tribal Transit Centers	Private Transit Routing Service Provider	traveler payment request	Planned	Request for information supporting payments. For fee structures that include incentives, the request may support either an account debit or an account credit or reimbursement.
Tribal Transit Centers	Private Transit Routing Service Provider	user account reports	Planned	Reports on services offered/provided and associated charges.
Tribal Transit Centers	Public Private Traveler Information	transit and fare schedules	Planned	Transit service information including routes, schedules, and fare information. This also includes on-demand service information.
Tribal Transit Centers	Public Private Traveler Information	transit fare information	Planned	Information provided by transit management that supports fare payment transactions.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Tribal Transit Centers	Public Private Traveler Information	transit trip plan	Planned	An origin-destination transit trip that may involve multiple modes and connections.
Tribal Transit Centers	Transit Providers Dispatch (Public and Private)	transit fare coordination	Planned	Fare and pricing information shared between local/regional transit organizations.
Tribal Transit Centers	Transit Providers Dispatch (Public and Private)	transit service coordination	Planned	Schedule coordination or AVL information shared between local/regional transit organizations. This includes coordination of connections and control parameters between transit properties as well as coordination of transit-related maintenance activities.
Tribal Transit Centers	Transit Providers Dispatch (Public and Private)	transit traveler information coordination	Planned	Transit schedules, real-time arrival information, fare schedules, and general transit service information shared between transit organizations to support transit traveler information systems.
Tribal Transit Centers	Tribal Data Archive	transit archive data	Planned	Data used to describe and monitor transit demand, fares, operations, and system performance. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
Tribal Transit Centers	Tribal TMC-TOC-TIC	emergency transit schedule information	Planned	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
Tribal Transit Centers	Tribal Transit Vehicles	alarm acknowledge	Existing	Confirmation that alarm was received, instructions and additional information for the alarm initiator, and requests for additional information.
Tribal Transit Centers	Tribal Transit Vehicles	authorization response	Planned	Notification of status of authorization request.
Tribal Transit Centers	Tribal Transit Vehicles	fare management information	Existing	Transit fare information and transaction data used to manage transit fare processing.
Tribal Transit Centers	Tribal Transit Vehicles	remote vehicle disable	Existing	Signal used to remotely disable a transit vehicle.
Tribal Transit Centers	Tribal Transit Vehicles	transit schedule information	Existing	Current and projected transit schedule information used to initialize the transit vehicle with a vehicle assignment, monitor schedule performance, and develop corrective actions on-board.
Tribal Transit Centers	Tribal Transit Vehicles	transit stop request	Planned	Notification that a transit stop has been requested by a transit user at a roadside stop. This flow identifies the route, stop, and the time of the request.
Tribal Transit Centers	Tribal Transit Vehicles	transit vehicle operator authentication update	Planned	Results of authentication process or update of on-board authentication database.
Tribal Transit Centers	Tribal Transit Vehicles	transit vehicle operator information	Existing	Transit service instructions, wide area alerts, traffic information, road conditions, and other information for both transit and paratransit operators.
Tribal Transit Centers	YCAT Kiosks	authorization response	Planned	Notification of status of authorization request.
Tribal Transit Centers	YCAT Kiosks	fare management information	Planned	Transit fare information and transaction data used to manage transit fare processing.
Tribal Transit Centers	YCAT Kiosks	transit traveler information	Planned	Transit information prepared to support transit users and other travelers. It contains transit schedules, real-time arrival information, fare schedules, alerts and advisories, and general transit service information.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Tribal Transit Centers	YCAT Transit Passes	authorization response	Planned	Notification of status of authorization request.
Tribal Transit Centers	YCAT Transit Passes	fare management information	Planned	Transit fare information and transaction data used to manage transit fare processing.
Tribal Transit Centers	YCAT Website	demand responsive transit plan	Planned	Plan regarding overall demand responsive transit schedules and deployment.
Tribal Transit Centers	YCAT Website	transit and fare schedules	Planned	Transit service information including routes, schedules, and fare information. This also includes on-demand service information.
Tribal Transit Centers	YCAT Website	transit fare information	Planned	Information provided by transit management that supports fare payment transactions.
Tribal Transit Centers	YCAT Website	transit schedule adherence information	Planned	Dynamic transit schedule adherence and transit vehicle location information.
Tribal Transit Centers	YCAT Website	transit trip plan	Planned	An origin-destination transit trip that may involve multiple modes and connections.
Tribal Transit Centers	Yuma County Area Transit (YCAT)	transit fare coordination	Planned	Fare and pricing information shared between local/regional transit organizations.
Tribal Transit Centers	Yuma County Area Transit (YCAT)	transit service coordination	Planned	Schedule coordination or AVL information shared between local/regional transit organizations. This includes coordination of connections and control parameters between transit properties as well as coordination of transit-related maintenance activities.
Tribal Transit Centers	Yuma County Area Transit (YCAT)	transit traveler information coordination	Planned	Transit schedules, real-time arrival information, fare schedules, and general transit service information shared between transit organizations to support transit traveler information systems.
Tribal Transit Vehicles	Payment Administration Center	authorization request	Planned	Request to determine if a transportation user is authorized to use a particular transportation resource.
Tribal Transit Vehicles	Traveler Card-Smartcard	payment device update	Planned	Information updated concerning traveler's personal data including name, address, user account information, trip records, and profile data.
Tribal Transit Vehicles	Traveler Card-Smartcard	request for payment	Planned	Request to deduct cost of service from user's payment account.
Tribal Transit Vehicles	Tribal Transit Centers	alarm notification	Existing	Notification of activation of an audible or silent alarm by a traveler in a public area or by a transit vehicle operator using an on-board device.
Tribal Transit Vehicles	Tribal Transit Centers	authorization request	Planned	Request to determine if a transportation user is authorized to use a particular transportation resource.
Tribal Transit Vehicles	Tribal Transit Centers	demand response passenger and use data	Existing	Data collected on board a demand response vehicle relating to the picking up and discharging of passengers.
Tribal Transit Vehicles	Tribal Transit Centers	fare collection data	Existing	Fare collection information including the summary of fare system data and financial payment transaction data.
Tribal Transit Vehicles	Tribal Transit Centers	transit vehicle conditions	Existing	Operating conditions of transit vehicle (e.g., engine running, oil pressure, fuel level and usage). It includes status of other on-board systems including user displays, passenger counters, and security systems. This overall status information is also collected from unused (out of service) vehicles.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Tribal Transit Vehicles	Tribal Transit Centers	transit vehicle loading data	Existing	Data collected on board the transit vehicle relating to passenger boarding and alighting.
Tribal Transit Vehicles	Tribal Transit Centers	transit vehicle location data	Planned	Current transit vehicle location and related operational conditions data provided by a transit vehicle.
Tribal Transit Vehicles	Tribal Transit Centers	transit vehicle operator authentication information	Existing	Information regarding on-board transit operator authentication
Tribal Transit Vehicles	Tribal Transit Centers	transit vehicle schedule performance	Existing	Estimated times of arrival and anticipated schedule deviations reported by a transit vehicle.
Tribal Transit Vehicles	YCAT Transit Passes	payment device update	Planned	Information updated concerning traveler's personal data including name, address, user account information, trip records, and profile data.
Tribal Transit Vehicles	YCAT Transit Passes	request for payment	Planned	Request to deduct cost of service from user's payment account.
US Border Patrol Dispatch	ADOT DEOC-Dept EM Ops Center	alert notification	Existing	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
US Border Patrol Dispatch	ADOT DEOC-Dept EM Ops Center	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
US Border Patrol Dispatch	ADOT DEOC-Dept EM Ops Center	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
US Border Patrol Dispatch	ADOT DEOC-Dept EM Ops Center	emergency traffic control request	Existing	Special request to preempt the current traffic control strategy in effect at one or more signalized intersections or highway segments, activate traffic control and closure systems such as gates and barriers, activate safeguard systems, or use driver information systems. For example, this flow can request all signals to red-flash, request a progression of traffic control preemptions along an emergency vehicle route, request a specific evacuation traffic control plan, request activation of a road closure barrier system, or place a public safety or emergency-related message on a dynamic message sign.
US Border Patrol Dispatch	ADOT DEOC-Dept EM Ops Center	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
US Border Patrol Dispatch	ADOT DEOC-Dept EM Ops Center	evacuation information	Existing	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
US Border Patrol Dispatch	ADOT DEOC-Dept EM Ops Center	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
US Border Patrol Dispatch	ADOT DEOC-Dept EM Ops Center	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
US Border Patrol Dispatch	ADOT DEOC-Dept EM Ops Center	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
US Border Patrol Dispatch	ADOT DEOC-Dept EM Ops Center	incident response status	Existing	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
US Border Patrol Dispatch	ADOT DEOC-Dept EM Ops Center	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
US Border Patrol Dispatch	ADOT DEOC-Dept EM Ops Center	resource request	Planned	A request for resources to implement special traffic control measures, assist in clean up, verify an incident, etc. The request may poll for resource availability or request pre-staging, staging, or immediate deployment of resources. Resources may be explicitly requested or a service may be requested and the specific resource deployment may be determined by the responding agency.
US Border Patrol Dispatch	ADOT DEOC-Dept EM Ops Center	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
US Border Patrol Dispatch	ADOT ECD Dispatch	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
US Border Patrol Dispatch	ADOT ECD Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
US Border Patrol Dispatch	ADOT ECD Dispatch	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
US Border Patrol Dispatch	ADOT ECD Dispatch	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
US Border Patrol Dispatch	ADOT ECD Dispatch	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
US Border Patrol Dispatch	ADOT ECD Dispatch	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
US Border Patrol Dispatch	ADOT ECD Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
US Border Patrol Dispatch	ADOT ECD Operational Communications	alert notification coordination	Planned	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
US Border Patrol Dispatch	ADOT ECD Operational Communications	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
US Border Patrol Dispatch	ADOT ECD Operational Communications	evacuation coordination	Planned	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
US Border Patrol Dispatch	ADOT ECD Operational Communications	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
US Border Patrol Dispatch	ADOT ECD Operational Communications	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
US Border Patrol Dispatch	ADOT ECD Operational Communications	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
US Border Patrol Dispatch	ADOT ECD Operational Communications	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
US Border Patrol Dispatch	ADOT ECD Operational Communications	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
US Border Patrol Dispatch	ADOT Motor Vehicle Division (MVD) Database	emergency archive data	Planned	Logged emergency information including information that characterizes identified incidents (routine highway incidents through disasters), corresponding incident response information, evacuation information, surveillance data, threat data, and resource information. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
US Border Patrol Dispatch	DEMA Enforcement	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
US Border Patrol Dispatch	DEMA Enforcement	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
US Border Patrol Dispatch	DEMA Enforcement	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
US Border Patrol Dispatch	DEMA Enforcement	incident command information coordination	Existing	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
US Border Patrol Dispatch	DEMA Enforcement	incident response coordination	Existing	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
US Border Patrol Dispatch	DEMA Enforcement	resource coordination	Existing	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
US Border Patrol Dispatch	DEMA Enforcement	transportation system status	Existing	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
US Border Patrol Dispatch	DEMA SEOC Arizona DEM Military Affairs	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
US Border Patrol Dispatch	DEMA SEOC Arizona DEM Military Affairs	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
US Border Patrol Dispatch	DEMA SEOC Arizona DEM Military Affairs	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
US Border Patrol Dispatch	DEMA SEOC Arizona DEM Military Affairs	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
US Border Patrol Dispatch	DEMA SEOC Arizona DEM Military Affairs	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
US Border Patrol Dispatch	DEMA SEOC Arizona DEM Military Affairs	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
US Border Patrol Dispatch	DEMA SEOC Arizona DEM Military Affairs	transportation system status	Existing	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
US Border Patrol Dispatch	DEMA WebEOC System	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
US Border Patrol Dispatch	DEMA WebEOC System	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
US Border Patrol Dispatch	DEMA WebEOC System	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
US Border Patrol Dispatch	DEMA WebEOC System	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
US Border Patrol Dispatch	DEMA WebEOC System	incident information for public	Existing	Report of current desensitized incident information prepared for public dissemination.
US Border Patrol Dispatch	DEMA WebEOC System	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
US Border Patrol Dispatch	DEMA WebEOC System	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
US Border Patrol Dispatch	DEMA WebEOC System	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
US Border Patrol Dispatch	DPS Central Communications Center	alert notification	Existing	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
US Border Patrol Dispatch	DPS Central Communications Center	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
US Border Patrol Dispatch	DPS Central Communications Center	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
US Border Patrol Dispatch	DPS Central Communications Center	emergency traffic control request	Existing	Special request to preempt the current traffic control strategy in effect at one or more signalized intersections or highway segments, activate traffic control and closure systems such as gates and barriers, activate safeguard systems, or use driver information systems. For example, this flow can request all signals to red-flash, request a progression of traffic control preemptions along an emergency vehicle route, request a specific evacuation traffic control plan, request activation of a road closure barrier system, or place a public safety or emergency-related message on a dynamic message sign.
US Border Patrol Dispatch	DPS Central Communications Center	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
US Border Patrol Dispatch	DPS Central Communications Center	evacuation information	Existing	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
US Border Patrol Dispatch	DPS Central Communications Center	incident command information coordination	Existing	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
US Border Patrol Dispatch	DPS Central Communications Center	incident information	Existing	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
US Border Patrol Dispatch	DPS Central Communications Center	incident response coordination	Existing	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
US Border Patrol Dispatch	DPS Central Communications Center	incident response status	Existing	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
US Border Patrol Dispatch	DPS Central Communications Center	resource coordination	Existing	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
US Border Patrol Dispatch	DPS Central Communications Center	resource request	Existing	A request for resources to implement special traffic control measures, assist in clean up, verify an incident, etc. The request may poll for resource availability or request pre-staging, staging, or immediate deployment of resources. Resources may be explicitly requested or a service may be requested and the specific resource deployment may be determined by the responding agency.
US Border Patrol Dispatch	DPS Central Communications Center	transportation system status	Existing	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
US Border Patrol Dispatch	DPS Console Interface (Other LE)	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
US Border Patrol Dispatch	DPS Console Interface (Other LE)	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
US Border Patrol Dispatch	DPS Console Interface (Other LE)	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
US Border Patrol Dispatch	DPS Console Interface (Other LE)	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
US Border Patrol Dispatch	DPS Console Interface (Other LE)	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
US Border Patrol Dispatch	DPS Console Interface (Other LE)	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
US Border Patrol Dispatch	DPS Console Interface (Other LE)	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
US Border Patrol Dispatch	Independent School District Bus Dispatch	alert notification	Existing	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
US Border Patrol Dispatch	Independent School District Bus Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
US Border Patrol Dispatch	Independent School District Bus Dispatch	emergency transit service request	Existing	Request to modify transit service and fare schedules to address emergencies, including requests for transit services to evacuate people from and/or deploy response agency personnel to an emergency scene. The request may poll for resource availability or request pre-staging, staging, or immediate dispatch of transit resources.
US Border Patrol Dispatch	Independent School District Bus Dispatch	evacuation information	Existing	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
US Border Patrol Dispatch	Independent School District Bus Dispatch	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
US Border Patrol Dispatch	Independent School District Bus Dispatch	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
US Border Patrol Dispatch	Independent School District Bus Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
US Border Patrol Dispatch	Local Dial-A-Ride Transit Dispatchers	alert notification	Existing	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
US Border Patrol Dispatch	Local Dial-A-Ride Transit Dispatchers	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
US Border Patrol Dispatch	Maricopa County EOC	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
US Border Patrol Dispatch	Maricopa County EOC	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
US Border Patrol Dispatch	Maricopa County EOC	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
US Border Patrol Dispatch	Maricopa County EOC	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
US Border Patrol Dispatch	Maricopa County EOC	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
US Border Patrol Dispatch	Maricopa County EOC	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
US Border Patrol Dispatch	Maricopa County EOC	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
US Border Patrol Dispatch	Mexico Customs and Border Patrol	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
US Border Patrol Dispatch	Mexico Customs and Border Patrol	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
US Border Patrol Dispatch	Mexico Customs and Border Patrol	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
US Border Patrol Dispatch	Mexico Customs and Border Patrol	incident command information coordination	Existing	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
US Border Patrol Dispatch	Mexico Customs and Border Patrol	incident response coordination	Existing	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
US Border Patrol Dispatch	Mexico Customs and Border Patrol	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
US Border Patrol Dispatch	Mexico Customs and Border Patrol	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
US Border Patrol Dispatch	Mexico Public Safety	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
US Border Patrol Dispatch	Mexico Public Safety	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
US Border Patrol Dispatch	Mexico Public Safety	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
US Border Patrol Dispatch	Mexico Public Safety	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
US Border Patrol Dispatch	Mexico Public Safety	incident response coordination	Existing	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
US Border Patrol Dispatch	Mexico Public Safety	resource coordination	Existing	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
US Border Patrol Dispatch	Mexico Public Safety	transportation system status	Existing	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
US Border Patrol Dispatch	Mexico Regional Maintenance Section	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
US Border Patrol Dispatch	Mexico Regional Maintenance Section	evacuation information	Planned	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
US Border Patrol Dispatch	Mexico Regional Maintenance Section	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
US Border Patrol Dispatch	Mexico Regional Maintenance Section	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
US Border Patrol Dispatch	Mexico Regional Maintenance Section	maint and constr resource request	Planned	Request for road maintenance and construction resources that can be used in the diversion of traffic (cones, portable signs), clearance of a road hazard, repair of ancillary damage, or any other incident response. The request may poll for resource availability or request pre-staging, staging, or immediate dispatch of resources.
US Border Patrol Dispatch	Mexico Regional Maintenance Section	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
US Border Patrol Dispatch	Railroad Operations Center	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
US Border Patrol Dispatch	Social Media and Networking	alert notification for social media	Planned	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public via social media. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This version of the flow contains only publicly available information and is structured and formatted for publication on specific social media platforms and other public-facing sites.
US Border Patrol Dispatch	Transit Providers Dispatch (Public and Private)	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
US Border Patrol Dispatch	Transit Providers Dispatch (Public and Private)	emergency transit service request	Existing	Request to modify transit service and fare schedules to address emergencies, including requests for transit services to evacuate people from and/or deploy response agency personnel to an emergency scene. The request may poll for resource availability or request pre-staging, staging, or immediate dispatch of transit resources.
US Border Patrol Dispatch	Transit Providers Dispatch (Public and Private)	evacuation information	Existing	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
US Border Patrol Dispatch	Transit Providers Dispatch (Public and Private)	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
US Border Patrol Dispatch	Transit Providers Dispatch (Public and Private)	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
US Border Patrol Dispatch	US Border Patrol Vehicles	emergency dispatch requests	Existing	Emergency vehicle dispatch instructions including incident location and available information concerning the incident.
US Border Patrol Vehicles	US Border Patrol Dispatch	emergency dispatch response	Existing	Request for additional emergency dispatch information and provision of en route status.
US Border Patrol Vehicles	US Border Patrol Dispatch	emergency vehicle tracking data	Existing	The current location and operating status of the emergency vehicle.
US VISIT System	ADOT TOC Traffic Information Center	border crossing status information	Existing	Port of entry status including current wait-times, lane configuration and status including closures and restrictions, and notification of incidents at the border
US VISIT System	CBP Website	border crossing status information	Existing	Port of entry status including current wait-times, lane configuration and status including closures and restrictions, and notification of incidents at the border

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
US VISIT System	POE Administration Center	border security input	Existing	Information regarding security related events occurring at the border.
US VISIT System	POE Roadway Inspection Systems	border crossing status information	Existing	Port of entry status including current wait-times, lane configuration and status including closures and restrictions, and notification of incidents at the border
US VISIT System	Public Private Traveler Information	border crossing status information	Existing	Port of entry status including current wait-times, lane configuration and status including closures and restrictions, and notification of incidents at the border
US VISIT System	Wide Area Alerting Systems	border crossing status information	Planned	Port of entry status including current wait-times, lane configuration and status including closures and restrictions, and notification of incidents at the border
Utah State Police Dispatch	ADOT DEOC-Dept EM Ops Center	alert notification	Existing	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
Utah State Police Dispatch	ADOT DEOC-Dept EM Ops Center	alert notification coordination	Planned	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Utah State Police Dispatch	ADOT DEOC-Dept EM Ops Center	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Utah State Police Dispatch	ADOT DEOC-Dept EM Ops Center	emergency traffic control request	Existing	Special request to preempt the current traffic control strategy in effect at one or more signalized intersections or highway segments, activate traffic control and closure systems such as gates and barriers, activate safeguard systems, or use driver information systems. For example, this flow can request all signals to red-flash, request a progression of traffic control preemptions along an emergency vehicle route, request a specific evacuation traffic control plan, request activation of a road closure barrier system, or place a public safety or emergency-related message on a dynamic message sign.
Utah State Police Dispatch	ADOT DEOC-Dept EM Ops Center	evacuation coordination	Planned	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Utah State Police Dispatch	ADOT DEOC-Dept EM Ops Center	evacuation information	Existing	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
Utah State Police Dispatch	ADOT DEOC-Dept EM Ops Center	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Utah State Police Dispatch	ADOT DEOC-Dept EM Ops Center	incident information	Existing	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
Utah State Police Dispatch	ADOT DEOC-Dept EM Ops Center	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
Utah State Police Dispatch	ADOT DEOC-Dept EM Ops Center	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Utah State Police Dispatch	ADOT DEOC-Dept EM Ops Center	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
Utah State Police Dispatch	ADOT DEOC-Dept EM Ops Center	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Utah State Police Dispatch	ADOT DEOC-Dept EM Ops Center	resource request	Planned	A request for resources to implement special traffic control measures, assist in clean up, verify an incident, etc. The request may poll for resource availability or request pre-staging, staging, or immediate deployment of resources. Resources may be explicitly requested or a service may be requested and the specific resource deployment may be determined by the responding agency.
Utah State Police Dispatch	ADOT DEOC-Dept EM Ops Center	threat information	Existing	Threats regarding transportation infrastructure, facilities, or systems detected by a variety of methods (sensors, surveillance, threat analysis of advisories from outside agencies, etc.
Utah State Police Dispatch	ADOT DEOC-Dept EM Ops Center	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
Utah State Police Dispatch	ADOT DEOC-Dept EM Ops Center	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Utah State Police Dispatch	ADOT ECD Dispatch	alert notification coordination	Planned	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Utah State Police Dispatch	ADOT ECD Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Utah State Police Dispatch	ADOT ECD Dispatch	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Utah State Police Dispatch	ADOT ECD Dispatch	incident command information coordination	Existing	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Utah State Police Dispatch	ADOT ECD Dispatch	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
Utah State Police Dispatch	ADOT ECD Dispatch	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Utah State Police Dispatch	ADOT ECD Dispatch	resource coordination	Existing	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Utah State Police Dispatch	ADOT ECD Dispatch	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
Utah State Police Dispatch	ADOT ECD Dispatch	transportation system status	Existing	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Utah State Police Dispatch	ADOT ECD Operational Communications	alert notification coordination	Planned	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Utah State Police Dispatch	ADOT ECD Operational Communications	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Utah State Police Dispatch	ADOT ECD Operational Communications	evacuation coordination	Planned	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Utah State Police Dispatch	ADOT ECD Operational Communications	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Utah State Police Dispatch	ADOT ECD Operational Communications	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
Utah State Police Dispatch	ADOT ECD Operational Communications	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
Utah State Police Dispatch	ADOT ECD Operational Communications	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Utah State Police Dispatch	ADOT ECD Operational Communications	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
Utah State Police Dispatch	ADOT ECD Operational Communications	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Utah State Police Dispatch	ADOT Motor Vehicle Division (MVD) Database	emergency archive data	Planned	Logged emergency information including information that characterizes identified incidents (routine highway incidents through disasters), corresponding incident response information, evacuation information, surveillance data, threat data, and resource information. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
Utah State Police Dispatch	ADOT TOC and EMC	alert notification	Planned	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Utah State Police Dispatch	ADOT TOC and EMC	alert notification coordination	Planned	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Utah State Police Dispatch	ADOT TOC and EMC	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Utah State Police Dispatch	ADOT TOC and EMC	emergency traffic control request	Planned	Special request to preempt the current traffic control strategy in effect at one or more signalized intersections or highway segments, activate traffic control and closure systems such as gates and barriers, activate safeguard systems, or use driver information systems. For example, this flow can request all signals to red-flash, request a progression of traffic control preemptions along an emergency vehicle route, request a specific evacuation traffic control plan, request activation of a road closure barrier system, or place a public safety or emergency-related message on a dynamic message sign.
Utah State Police Dispatch	ADOT TOC and EMC	evacuation coordination	Planned	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Utah State Police Dispatch	ADOT TOC and EMC	evacuation information	Planned	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
Utah State Police Dispatch	ADOT TOC and EMC	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Utah State Police Dispatch	ADOT TOC and EMC	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
Utah State Police Dispatch	ADOT TOC and EMC	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
Utah State Police Dispatch	ADOT TOC and EMC	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Utah State Police Dispatch	ADOT TOC and EMC	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
Utah State Police Dispatch	ADOT TOC and EMC	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Utah State Police Dispatch	ADOT TOC and EMC	resource request	Planned	A request for resources to implement special traffic control measures, assist in clean up, verify an incident, etc. The request may poll for resource availability or request pre-staging, staging, or immediate deployment of resources. Resources may be explicitly requested or a service may be requested and the specific resource deployment may be determined by the responding agency.
Utah State Police Dispatch	ADOT TOC and EMC	threat information	Planned	Threats regarding transportation infrastructure, facilities, or systems detected by a variety of methods (sensors, surveillance, threat analysis of advisories from outside agencies, etc.
Utah State Police Dispatch	ADOT TOC and EMC	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
Utah State Police Dispatch	ADOT TOC and EMC	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Utah State Police Dispatch	ADOT TOC Traffic Information Center	alert notification	Planned	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
Utah State Police Dispatch	ADOT TOC Traffic Information Center	evacuation information	Planned	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
Utah State Police Dispatch	ADOT TOC Traffic Information Center	incident information for public	Planned	Report of current desensitized incident information prepared for public dissemination.
Utah State Police Dispatch	ADOT TOC Traffic Information Center	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Utah State Police Dispatch	CHP Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Utah State Police Dispatch	CHP Dispatch	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Utah State Police Dispatch	CHP Dispatch	incident command information coordination	Existing	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Utah State Police Dispatch	CHP Dispatch	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
Utah State Police Dispatch	CHP Dispatch	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Utah State Police Dispatch	CHP Dispatch	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Utah State Police Dispatch	CHP Dispatch	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
Utah State Police Dispatch	CHP Dispatch	transportation system status	Existing	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Utah State Police Dispatch	DEMA Enforcement	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Utah State Police Dispatch	DEMA Enforcement	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Utah State Police Dispatch	DEMA Enforcement	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Utah State Police Dispatch	DEMA Enforcement	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Utah State Police Dispatch	DEMA Enforcement	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
Utah State Police Dispatch	DEMA Enforcement	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Utah State Police Dispatch	DEMA Enforcement	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Utah State Police Dispatch	DEMA Enforcement	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
Utah State Police Dispatch	DEMA Enforcement	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Utah State Police Dispatch	DEMA SEOC Arizona DEM Military Affairs	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Utah State Police Dispatch	DEMA SEOC Arizona DEM Military Affairs	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Utah State Police Dispatch	DEMA SEOC Arizona DEM Military Affairs	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Utah State Police Dispatch	DEMA SEOC Arizona DEM Military Affairs	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Utah State Police Dispatch	DEMA SEOC Arizona DEM Military Affairs	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Utah State Police Dispatch	DEMA SEOC Arizona DEM Military Affairs	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Utah State Police Dispatch	DEMA SEOC Arizona DEM Military Affairs	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Utah State Police Dispatch	DEMA SEOC Arizona DEM Military Affairs	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
Utah State Police Dispatch	DEMA SEOC Arizona DEM Military Affairs	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Utah State Police Dispatch	DEMA WebEOC System	alert notification coordination	Planned	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Utah State Police Dispatch	DEMA WebEOC System	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Utah State Police Dispatch	DEMA WebEOC System	evacuation coordination	Planned	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Utah State Police Dispatch	DEMA WebEOC System	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Utah State Police Dispatch	DEMA WebEOC System	incident information for public	Existing	Report of current desensitized incident information prepared for public dissemination.
Utah State Police Dispatch	DEMA WebEOC System	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Utah State Police Dispatch	DEMA WebEOC System	incident response coordination	Existing	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Utah State Police Dispatch	DEMA WebEOC System	resource coordination	Existing	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Utah State Police Dispatch	DEMA WebEOC System	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
Utah State Police Dispatch	DEMA WebEOC System	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Utah State Police Dispatch	DPS Central Communications Center	alert notification	Existing	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
Utah State Police Dispatch	DPS Central Communications Center	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Utah State Police Dispatch	DPS Central Communications Center	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Utah State Police Dispatch	DPS Central Communications Center	emergency traffic control request	Existing	Special request to preempt the current traffic control strategy in effect at one or more signalized intersections or highway segments, activate traffic control and closure systems such as gates and barriers, activate safeguard systems, or use driver information systems. For example, this flow can request all signals to red-flash, request a progression of traffic control preemptions along an emergency vehicle route, request a specific evacuation traffic control plan, request activation of a road closure barrier system, or place a public safety or emergency-related message on a dynamic message sign.
Utah State Police Dispatch	DPS Central Communications Center	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Utah State Police Dispatch	DPS Central Communications Center	evacuation information	Existing	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
Utah State Police Dispatch	DPS Central Communications Center	incident command information coordination	Existing	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Utah State Police Dispatch	DPS Central Communications Center	incident information	Existing	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
Utah State Police Dispatch	DPS Central Communications Center	incident report	Existing	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
Utah State Police Dispatch	DPS Central Communications Center	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Utah State Police Dispatch	DPS Central Communications Center	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
Utah State Police Dispatch	DPS Central Communications Center	resource coordination	Existing	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Utah State Police Dispatch	DPS Central Communications Center	resource request	Planned	A request for resources to implement special traffic control measures, assist in clean up, verify an incident, etc. The request may poll for resource availability or request pre-staging, staging, or immediate deployment of resources. Resources may be explicitly requested or a service may be requested and the specific resource deployment may be determined by the responding agency.

Utah State Police Dispatch	DPS Central Communications Center	threat information coordination	Existing	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Utah State Police Dispatch	DPS Central Communications Center	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Utah State Police Dispatch	Maricopa County EOC	alert notification coordination	Planned	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Utah State Police Dispatch	Maricopa County EOC	evacuation coordination	Planned	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Utah State Police Dispatch	Maricopa County EOC	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Utah State Police Dispatch	Maricopa County EOC	incident report	Planned	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
Utah State Police Dispatch	Maricopa County EOC	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Utah State Police Dispatch	Maricopa County EOC	threat information coordination	Planned	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
Utah State Police Dispatch	Maricopa County EOC	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Utah State Police Dispatch	POE Roadway Inspection Systems	alert notification	Planned	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
Utah State Police Dispatch	POE Roadway Inspection Systems	incident information for public	Planned	Report of current desensitized incident information prepared for public dissemination.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Utah State Police Dispatch	POE Roadway Inspection Systems	transportation system status	Existing	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Utah State Police Dispatch	Public Private Traveler Information	alert notification	Planned	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
Utah State Police Dispatch	Public Private Traveler Information	evacuation information	Existing	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
Utah State Police Dispatch	Public Private Traveler Information	incident information for public	Planned	Report of current desensitized incident information prepared for public dissemination.
Utah State Police Dispatch	Public Private Traveler Information	transportation system status	Existing	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Utah State Police Dispatch	Social Media and Networking	alert notification for social media	Planned	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public via social media. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This version of the flow contains only publicly available information and is structured and formatted for publication on specific social media platforms and other public-facing sites.
Utah State Police Dispatch	Transit Providers Dispatch (Public and Private)	alert notification	Existing	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
Utah State Police Dispatch	Transit Providers Dispatch (Public and Private)	emergency plan coordination	Planned	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Utah State Police Dispatch	Transit Providers Dispatch (Public and Private)	emergency transit service request	Existing	Request to modify transit service and fare schedules to address emergencies, including requests for transit services to evacuate people from and/or deploy response agency personnel to an emergency scene. The request may poll for resource availability or request pre-staging, staging, or immediate dispatch of transit resources.
Utah State Police Dispatch	Transit Providers Dispatch (Public and Private)	evacuation information	Existing	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
Utah State Police Dispatch	Transit Providers Dispatch (Public and Private)	incident information	Planned	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
Utah State Police Dispatch	Transit Providers Dispatch (Public and Private)	incident response status	Planned	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
Utah State Police Dispatch	Transit Providers Dispatch (Public and Private)	transportation system status	Existing	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Utah State Police Dispatch	Wide Area Alerting Systems	alert notification	Planned	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
Utah State Police Dispatch	Wide Area Alerting Systems	evacuation information	Existing	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
Utah State Police Dispatch	Wide Area Alerting Systems	incident information for public	Existing	Report of current desensitized incident information prepared for public dissemination.
Utah State Police Dispatch	Wide Area Alerting Systems	transportation system status	Existing	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Utah Statewide TMC	ADOT DEOC-Dept EM Ops Center	emergency traffic coordination	Existing	Coordination supporting disaster response including evacuation and reentry. Includes coordination of special traffic control strategies that support efficient evacuation and reentry while protecting and optimizing movement of response vehicles and other resources responding to the emergency.
Utah Statewide TMC	ADOT TOC and EMC	emergency traffic coordination	Planned	Coordination supporting disaster response including evacuation and reentry. Includes coordination of special traffic control strategies that support efficient evacuation and reentry while protecting and optimizing movement of response vehicles and other resources responding to the emergency.
Utah Statewide TMC	DPS Central Communications Center	emergency traffic coordination	Existing	Coordination supporting disaster response including evacuation and reentry. Includes coordination of special traffic control strategies that support efficient evacuation and reentry while protecting and optimizing movement of response vehicles and other resources responding to the emergency.
Vehicle GPS and Time Data	ADOT ECD Vehicles	location and time	Existing	The current geographic location in three dimensions (latitude, longitude, elevation) and the current time.
Vehicle GPS and Time Data	ADOT IRU Vehicles	location and time	Existing	The current geographic location in three dimensions (latitude, longitude, elevation) and the current time.
Vehicle GPS and Time Data	ADOT Maintenance and Construction Vehicles	location and time	Existing	The current geographic location in three dimensions (latitude, longitude, elevation) and the current time.
Vehicle GPS and Time Data	ADOT Systems Maintenance Vehicles	location and time	Planned	The current geographic location in three dimensions (latitude, longitude, elevation) and the current time.

Vehicle GPS and Time Data	Tribal Transit Vehicles	location and time	Planned	The current geographic location in three dimensions (latitude, longitude, elevation) and the current time.
Vehicle GPS and Time Data	YCAT Buses	location and time	Planned	The current geographic location in three dimensions (latitude, longitude, elevation) and the current time.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Wide Area Alerting Systems	ADOT 511 IVR	voice-based alert notification	Planned	Information to be distributed to the traveling public via voice regarding a major emergency such as a natural or man-made disaster, civil emergency, severe weather or child abduction. The flow may identify the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. The content of this information flow may be specially formatted for voice-based traveler information.
Wide Area Alerting Systems	ADOT 511 IVR	voice-based traveler information	Planned	Traveler information sent to the telecommunications systems for traveler information terminator. This flow may represent the bulk transfer of traveler information, including traffic conditions, incident information, transit information and weather and road condition information. It may be specially formatted for voice-based traveler information.
Wide Area Alerting Systems	ADOT 511 Website	emergency traveler information	Planned	Public notification of an emergency such as a natural or man-made disaster, civil emergency, or child abduction. This flow also includes evacuation information including evacuation instructions, evacuation zones, recommended evacuation times, tailored evacuation routes and destinations, traffic and road conditions along the evacuation routes, traveler services and shelter information, and reentry times and instructions.
Wide Area Alerting Systems	ADOT AZ 511 App	traveler information for media	Existing	General traveler information regarding incidents, unusual traffic conditions, transit issues, or other advisory information that has been desensitized and provided to the media.
Wide Area Alerting Systems	ADOT DEOC-Dept EM Ops Center	alert status	Planned	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
Wide Area Alerting Systems	ADOT DEOC-Dept EM Ops Center	alerts and advisories	Planned	Assessments (general incident and vulnerability awareness information), advisories (identification of threats or recommendations to increase preparedness levels), and alerts (information on imminent or in-progress emergencies). This flow also provides supporting descriptive detail on incidents, threats, and vulnerabilities to increase preparedness and support effective response to threats against the surface transportation system.
Wide Area Alerting Systems	ADOT ECD Dispatch	alert status	Planned	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
Wide Area Alerting Systems	ADOT ECD Dispatch	alerts and advisories	Planned	Assessments (general incident and vulnerability awareness information), advisories (identification of threats or recommendations to increase preparedness levels), and alerts (information on imminent or in-progress emergencies). This flow also provides supporting descriptive detail on incidents, threats, and vulnerabilities to increase preparedness and support effective response to threats against the surface transportation system.
Wide Area Alerting Systems	ADOT TOC and EMC	alert status	Planned	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Wide Area Alerting Systems	ADOT TOC and EMC	alerts and advisories	Planned	Assessments (general incident and vulnerability awareness information), advisories (identification of threats or recommendations to increase preparedness levels), and alerts (information on imminent or in-progress emergencies). This flow also provides supporting descriptive detail on incidents, threats, and vulnerabilities to increase preparedness and support effective response to threats against the surface transportation system.
Wide Area Alerting Systems	ATTP Tribal Coordination Website	emergency traveler information	Planned	Public notification of an emergency such as a natural or man-made disaster, civil emergency, or child abduction. This flow also includes evacuation information including evacuation instructions, evacuation zones, recommended evacuation times, tailored evacuation routes and destinations, traffic and road conditions along the evacuation routes, traveler services and shelter information, and reentry times and instructions.
Wide Area Alerting Systems	CHP Dispatch	alert status	Planned	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
Wide Area Alerting Systems	CHP Dispatch	alerts and advisories	Planned	Assessments (general incident and vulnerability awareness information), advisories (identification of threats or recommendations to increase preparedness levels), and alerts (information on imminent or in-progress emergencies). This flow also provides supporting descriptive detail on incidents, threats, and vulnerabilities to increase preparedness and support effective response to threats against the surface transportation system.
Wide Area Alerting Systems	Cities and Towns EOC-EMC	alerts and advisories	Planned	Assessments (general incident and vulnerability awareness information), advisories (identification of threats or recommendations to increase preparedness levels), and alerts (information on imminent or in-progress emergencies). This flow also provides supporting descriptive detail on incidents, threats, and vulnerabilities to increase preparedness and support effective response to threats against the surface transportation system.
Wide Area Alerting Systems	Cities and Towns Police and Fire Dispatch	alerts and advisories	Planned	Assessments (general incident and vulnerability awareness information), advisories (identification of threats or recommendations to increase preparedness levels), and alerts (information on imminent or in-progress emergencies). This flow also provides supporting descriptive detail on incidents, threats, and vulnerabilities to increase preparedness and support effective response to threats against the surface transportation system.
Wide Area Alerting Systems	Cities and Towns TIC and Website	alternate mode information	Planned	Schedule information for alternate mode transportation providers such as air, ferry, and passenger-carrying heavy rail. This also includes details of incidents and other service disruptions that have occurred in the alternative mode. This also includes measures of service demand that supports assessment of their impact on the road network.
Wide Area Alerting Systems	Cities and Towns TIC and Website	emergency traveler information	Planned	Public notification of an emergency such as a natural or man-made disaster, civil emergency, or child abduction. This flow also includes evacuation information including evacuation instructions, evacuation zones, recommended evacuation times, tailored evacuation routes and destinations, traffic and road conditions along the evacuation routes, traveler services and shelter information, and reentry times and instructions.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Wide Area Alerting Systems	Cities and Towns TIC and Website	incident information for public	Planned	Report of current desensitized incident information prepared for public dissemination.
Wide Area Alerting Systems	Cities and Towns TIC and Website	parking information	Planned	General parking information and status, including current parking availability, parking pricing, and parking space availability information, including features like number and type of electric charging spots.
Wide Area Alerting Systems	Cities and Towns TIC and Website	road network conditions	Planned	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.
Wide Area Alerting Systems	Cities and Towns TIC and Website	traffic images	Planned	High fidelity, real-time traffic images suitable for surveillance monitoring by the operator or for use in machine vision applications. This flow includes the images. Meta data that describes the images is contained in another flow.
Wide Area Alerting Systems	Cities and Towns TIC and Website	transit service information	Planned	Transit service information including routes, schedules, and fare information as well as dynamic transit schedule adherence and transit vehicle location information.
Wide Area Alerting Systems	Cities and Towns TMC-TOC	road network environmental situation data	Planned	Aggregated environmental situation data collected from vehicles and other sources for the road network. Aggregated information would include measured air temperature, exterior light status, wiper status, sun sensor status, rain sensor status, traction control status, ALB status, and other collected vehicle system status and sensor information for the region.
Wide Area Alerting Systems	Commercial Vehicle Driver and Vehicle Verification Systems	traveler archive data	Planned	Data associated with traveler information services including service requests, facility usage, rideshare, routing, and traveler payment transaction data. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
Wide Area Alerting Systems	County EMC-EOC	alerts and advisories	Planned	Assessments (general incident and vulnerability awareness information), advisories (identification of threats or recommendations to increase preparedness levels), and alerts (information on imminent or in-progress emergencies). This flow also provides supporting descriptive detail on incidents, threats, and vulnerabilities to increase preparedness and support effective response to threats against the surface transportation system.
Wide Area Alerting Systems	County Mobile App	traveler information for media	Planned	General traveler information regarding incidents, unusual traffic conditions, transit issues, or other advisory information that has been desensitized and provided to the media.
Wide Area Alerting Systems	County Sheriff Dispatch	alerts and advisories	Planned	Assessments (general incident and vulnerability awareness information), advisories (identification of threats or recommendations to increase preparedness levels), and alerts (information on imminent or in-progress emergencies). This flow also provides supporting descriptive detail on incidents, threats, and vulnerabilities to increase preparedness and support effective response to threats against the surface transportation system.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Wide Area Alerting Systems	DEMA SEOC Arizona DEM Military Affairs	alerts and advisories	Planned	Assessments (general incident and vulnerability awareness information), advisories (identification of threats or recommendations to increase preparedness levels), and alerts (information on imminent or in-progress emergencies). This flow also provides supporting descriptive detail on incidents, threats, and vulnerabilities to increase preparedness and support effective response to threats against the surface transportation system.
Wide Area Alerting Systems	DPS Central Communications Center	alert status	Planned	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
Wide Area Alerting Systems	DPS Central Communications Center	alerts and advisories	Planned	Assessments (general incident and vulnerability awareness information), advisories (identification of threats or recommendations to increase preparedness levels), and alerts (information on imminent or in-progress emergencies). This flow also provides supporting descriptive detail on incidents, threats, and vulnerabilities to increase preparedness and support effective response to threats against the surface transportation system.
Wide Area Alerting Systems	DPS Data Archive	traveler archive data	Planned	Data associated with traveler information services including service requests, facility usage, rideshare, routing, and traveler payment transaction data. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
Wide Area Alerting Systems	Maricopa County EOC	alert status	Planned	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
Wide Area Alerting Systems	Maricopa County EOC	alerts and advisories	Planned	Assessments (general incident and vulnerability awareness information), advisories (identification of threats or recommendations to increase preparedness levels), and alerts (information on imminent or in-progress emergencies). This flow also provides supporting descriptive detail on incidents, threats, and vulnerabilities to increase preparedness and support effective response to threats against the surface transportation system.
Wide Area Alerting Systems	Mexico Customs and Border Patrol	alert status	Planned	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
Wide Area Alerting Systems	Mexico Customs and Border Patrol	alerts and advisories	Planned	Assessments (general incident and vulnerability awareness information), advisories (identification of threats or recommendations to increase preparedness levels), and alerts (information on imminent or in-progress emergencies). This flow also provides supporting descriptive detail on incidents, threats, and vulnerabilities to increase preparedness and support effective response to threats against the surface transportation system.
Wide Area Alerting Systems	Mexico Public Safety	alert status	Planned	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Wide Area Alerting Systems	Mexico Public Safety	alerts and advisories	Planned	Assessments (general incident and vulnerability awareness information), advisories (identification of threats or recommendations to increase preparedness levels), and alerts (information on imminent or in-progress emergencies). This flow also provides supporting descriptive detail on incidents, threats, and vulnerabilities to increase preparedness and support effective response to threats against the surface transportation system.
Wide Area Alerting Systems	Mexico Regional Maintenance Section	alerts and advisories	Planned	Assessments (general incident and vulnerability awareness information), advisories (identification of threats or recommendations to increase preparedness levels), and alerts (information on imminent or in-progress emergencies). This flow also provides supporting descriptive detail on incidents, threats, and vulnerabilities to increase preparedness and support effective response to threats against the surface transportation system.
Wide Area Alerting Systems	NAIPTA (dba Mountain Line) Website and FLGRide	emergency traveler information	Planned	Public notification of an emergency such as a natural or man-made disaster, civil emergency, or child abduction. This flow also includes evacuation information including evacuation instructions, evacuation zones, recommended evacuation times, tailored evacuation routes and destinations, traffic and road conditions along the evacuation routes, traveler services and shelter information, and reentry times and instructions.
Wide Area Alerting Systems	Nevada State Police Dispatch	alert status	Planned	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
Wide Area Alerting Systems	Nevada State Police Dispatch	alerts and advisories	Planned	Assessments (general incident and vulnerability awareness information), advisories (identification of threats or recommendations to increase preparedness levels), and alerts (information on imminent or in-progress emergencies). This flow also provides supporting descriptive detail on incidents, threats, and vulnerabilities to increase preparedness and support effective response to threats against the surface transportation system.
Wide Area Alerting Systems	New Mexico State Police Dispatch	alert status	Planned	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
Wide Area Alerting Systems	New Mexico State Police Dispatch	alerts and advisories	Planned	Assessments (general incident and vulnerability awareness information), advisories (identification of threats or recommendations to increase preparedness levels), and alerts (information on imminent or in-progress emergencies). This flow also provides supporting descriptive detail on incidents, threats, and vulnerabilities to increase preparedness and support effective response to threats against the surface transportation system.
Wide Area Alerting Systems	NOAA _National Weather Service	road network environmental situation data	Planned	Aggregated environmental situation data collected from vehicles and other sources for the road network. Aggregated information would include measured air temperature, exterior light status, wiper status, sun sensor status, rain sensor status, traction control status, ALB status, and other collected vehicle system status and sensor information for the region.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Wide Area Alerting Systems	Personal Information Devices for Travelers	emergency traveler information	Planned	Public notification of an emergency such as a natural or man-made disaster, civil emergency, or child abduction. This flow also includes evacuation information including evacuation instructions, evacuation zones, recommended evacuation times, tailored evacuation routes and destinations, traffic and road conditions along the evacuation routes, traveler services and shelter information, and reentry times and instructions.
Wide Area Alerting Systems	Personal Information Devices for Travelers	evacuation assistance information	Planned	Information on evacuation resources including self-evacuation options, anticipated pickup time and location if a transportation asset is to be deployed, destination shelter, and supporting information on what to bring, estimated reentry date/time.
Wide Area Alerting Systems	Personal Information Devices for Travelers	shelter recommendations	Planned	Recommendation identifying the shelter or shelters best suited to the requestor. Hotels/motels may also be included as potential sheltering options. This flow may also include shelter assignments/reservations.
Wide Area Alerting Systems	POE Roadway Inspection Systems	emergency traveler information	Planned	Public notification of an emergency such as a natural or man-made disaster, civil emergency, or child abduction. This flow also includes evacuation information including evacuation instructions, evacuation zones, recommended evacuation times, tailored evacuation routes and destinations, traffic and road conditions along the evacuation routes, traveler services and shelter information, and reentry times and instructions.
Wide Area Alerting Systems	Private Vehicle OBE	emergency traveler information	Planned	Public notification of an emergency such as a natural or man-made disaster, civil emergency, or child abduction. This flow also includes evacuation information including evacuation instructions, evacuation zones, recommended evacuation times, tailored evacuation routes and destinations, traffic and road conditions along the evacuation routes, traveler services and shelter information, and reentry times and instructions.
Wide Area Alerting Systems	Private Vehicle OBE	evacuation assistance information	Planned	Information on evacuation resources including self-evacuation options, anticipated pickup time and location if a transportation asset is to be deployed, destination shelter, and supporting information on what to bring, estimated reentry date/time.
Wide Area Alerting Systems	Private Vehicle OBE	shelter recommendations	Planned	Recommendation identifying the shelter or shelters best suited to the requestor. Hotels/motels may also be included as potential sheltering options. This flow may also include shelter assignments/reservations.
Wide Area Alerting Systems	Public Private Traveler Information	emergency traveler information	Planned	Public notification of an emergency such as a natural or man-made disaster, civil emergency, or child abduction. This flow also includes evacuation information including evacuation instructions, evacuation zones, recommended evacuation times, tailored evacuation routes and destinations, traffic and road conditions along the evacuation routes, traveler services and shelter information, and reentry times and instructions.
Wide Area Alerting Systems	Tribal Public Safety Dispatch	alert status	Planned	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Wide Area Alerting Systems	Tribal Public Safety Dispatch	alerts and advisories	Planned	Assessments (general incident and vulnerability awareness information), advisories (identification of threats or recommendations to increase preparedness levels), and alerts (information on imminent or in-progress emergencies). This flow also provides supporting descriptive detail on incidents, threats, and vulnerabilities to increase preparedness and support effective response to threats against the surface transportation system.
Wide Area Alerting Systems	Tribal TMC-TOC-TIC	alerts and advisories	Planned	Assessments (general incident and vulnerability awareness information), advisories (identification of threats or recommendations to increase preparedness levels), and alerts (information on imminent or in-progress emergencies). This flow also provides supporting descriptive detail on incidents, threats, and vulnerabilities to increase preparedness and support effective response to threats against the surface transportation system.
Wide Area Alerting Systems	Tribal TMC-TOC-TIC	alternate mode information	Planned	Schedule information for alternate mode transportation providers such as air, ferry, and passenger-carrying heavy rail. This also includes details of incidents and other service disruptions that have occurred in the alternative mode. This also includes measures of service demand that supports assessment of their impact on the road network.
Wide Area Alerting Systems	Tribal TMC-TOC-TIC	emergency traveler information	Planned	Public notification of an emergency such as a natural or man-made disaster, civil emergency, or child abduction. This flow also includes evacuation information including evacuation instructions, evacuation zones, recommended evacuation times, tailored evacuation routes and destinations, traffic and road conditions along the evacuation routes, traveler services and shelter information, and reentry times and instructions.
Wide Area Alerting Systems	Tribal TMC-TOC-TIC	incident information for public	Planned	Report of current desensitized incident information prepared for public dissemination.
Wide Area Alerting Systems	Tribal TMC-TOC-TIC	parking information	Planned	General parking information and status, including current parking availability, parking pricing, and parking space availability information, including features like number and type of electric charging spots.
Wide Area Alerting Systems	Tribal TMC-TOC-TIC	road network conditions	Planned	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.
Wide Area Alerting Systems	Tribal TMC-TOC-TIC	road network environmental situation data	Planned	Aggregated environmental situation data collected from vehicles and other sources for the road network. Aggregated information would include measured air temperature, exterior light status, wiper status, sun sensor status, rain sensor status, traction control status, ALB status, and other collected vehicle system status and sensor information for the region.
Wide Area Alerting Systems	Tribal TMC-TOC-TIC	road network traffic situation data	Planned	Aggregated route usage, travel times, and other aggregated data collected from probe vehicles that can be used to estimate current traffic conditions.
Wide Area Alerting Systems	Tribal TMC-TOC-TIC	traffic images	Planned	High fidelity, real-time traffic images suitable for surveillance monitoring by the operator or for use in machine vision applications. This flow includes the images. Meta data that describes the images is contained in another flow.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Wide Area Alerting Systems	Tribal TMC-TOC-TIC	transit service information	Planned	Transit service information including routes, schedules, and fare information as well as dynamic transit schedule adherence and transit vehicle location information.
Wide Area Alerting Systems	US Border Patrol Dispatch	alerts and advisories	Planned	Assessments (general incident and vulnerability awareness information), advisories (identification of threats or recommendations to increase preparedness levels), and alerts (information on imminent or in-progress emergencies). This flow also provides supporting descriptive detail on incidents, threats, and vulnerabilities to increase preparedness and support effective response to threats against the surface transportation system.
Wide Area Alerting Systems	Utah State Police Dispatch	alert status	Planned	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
Wide Area Alerting Systems	Utah State Police Dispatch	alerts and advisories	Planned	Assessments (general incident and vulnerability awareness information), advisories (identification of threats or recommendations to increase preparedness levels), and alerts (information on imminent or in-progress emergencies). This flow also provides supporting descriptive detail on incidents, threats, and vulnerabilities to increase preparedness and support effective response to threats against the surface transportation system.
YCAT Buses	Cities and Towns ITS Field Equipment	local signal priority request	Planned	Request from a vehicle to a signalized intersection for priority at that intersection. This flow also allows the vehicle to cancel a priority request (for example, when the vehicle clears the intersection).
YCAT Buses	County ITS Field Equipment	local signal priority request	Planned	Request from a vehicle to a signalized intersection for priority at that intersection. This flow also allows the vehicle to cancel a priority request (for example, when the vehicle clears the intersection).
YCAT Buses	Payment Administration Center	authorization request	Planned	Request to determine if a transportation user is authorized to use a particular transportation resource.
YCAT Buses	Transit Providers Vehicles (Public and Private)	host transit vehicle status	Planned	Information provided to the ITS on-board equipment from other systems on the Transit Vehicle Platform.
YCAT Buses	Traveler Card-Smartcard	payment device update	Planned	Information updated concerning traveler's personal data including name, address, user account information, trip records, and profile data.
YCAT Buses	Traveler Card-Smartcard	request for payment	Planned	Request to deduct cost of service from user's payment account.
YCAT Buses	Travelers	traveler interface updates	Planned	Visual or audio information (e.g., routes, messages, guidance, emergency information) that is provided to the traveler.
YCAT Buses	YCAT Transit Passes	payment device update	Planned	Information updated concerning traveler's personal data including name, address, user account information, trip records, and profile data.
YCAT Buses	YCAT Transit Passes	request for payment	Planned	Request to deduct cost of service from user's payment account.
YCAT Buses	Yuma County Area Transit (YCAT)	alarm notification	Existing	Notification of activation of an audible or silent alarm by a traveler in a public area or by a transit vehicle operator using an on-board device.
YCAT Buses	Yuma County Area Transit (YCAT)	authorization request	Planned	Request to determine if a transportation user is authorized to use a particular transportation resource.
YCAT Buses	Yuma County Area Transit (YCAT)	demand response passenger and use data	Existing	Data collected on board a demand response vehicle relating to the picking up and discharging of passengers.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
YCAT Buses	Yuma County Area Transit (YCAT)	fare collection data	Planned	Fare collection information including the summary of fare system data and financial payment transaction data.
YCAT Buses	Yuma County Area Transit (YCAT)	transit traveler request	Existing	Request by a Transit traveler to summon assistance, request transit information, or request any other transit services.
YCAT Buses	Yuma County Area Transit (YCAT)	transit vehicle conditions	Existing	Operating conditions of transit vehicle (e.g., engine running, oil pressure, fuel level and usage). It includes status of other on-board systems including user displays, passenger counters, and security systems. This overall status information is also collected from unused (out of service) vehicles.
YCAT Buses	Yuma County Area Transit (YCAT)	transit vehicle loading data	Existing	Data collected on board the transit vehicle relating to passenger boarding and alighting.
YCAT Buses	Yuma County Area Transit (YCAT)	transit vehicle location data	Existing	Current transit vehicle location and related operational conditions data provided by a transit vehicle.
YCAT Buses	Yuma County Area Transit (YCAT)	transit vehicle operator authentication information	Existing	Information regarding on-board transit operator authentication
YCAT Buses	Yuma County Area Transit (YCAT)	transit vehicle schedule performance	Existing	Estimated times of arrival and anticipated schedule deviations reported by a transit vehicle.
YCAT Kiosks	Cities and Towns Transit Dispatch	authorization request	Planned	Request to determine if a transportation user is authorized to use a particular transportation resource.
YCAT Kiosks	Cities and Towns Transit Dispatch	fare collection data	Planned	Fare collection information including the summary of fare system data and financial payment transaction data.
YCAT Kiosks	Cities and Towns Transit Dispatch	transit traveler request	Planned	Request by a Transit traveler to summon assistance, request transit information, or request any other transit services.
YCAT Kiosks	Local Dial-A-Ride Transit Dispatchers	authorization request	Planned	Request to determine if a transportation user is authorized to use a particular transportation resource.
YCAT Kiosks	Local Dial-A-Ride Transit Dispatchers	fare collection data	Planned	Fare collection information including the summary of fare system data and financial payment transaction data.
YCAT Kiosks	Payment Administration Center	authorization request	Planned	Request to determine if a transportation user is authorized to use a particular transportation resource.
YCAT Kiosks	Traveler Card-Smartcard	payment device update	Planned	Information updated concerning traveler's personal data including name, address, user account information, trip records, and profile data.
YCAT Kiosks	Traveler Card-Smartcard	request for payment	Planned	Request to deduct cost of service from user's payment account.
YCAT Kiosks	Travelers	traveler interface updates	Planned	Visual or audio information (e.g., routes, messages, guidance, emergency information) that is provided to the traveler.
YCAT Kiosks	Tribal Transit Centers	authorization request	Planned	Request to determine if a transportation user is authorized to use a particular transportation resource.
YCAT Kiosks	Tribal Transit Centers	fare collection data	Planned	Fare collection information including the summary of fare system data and financial payment transaction data.
YCAT Kiosks	Tribal Transit Centers	transit traveler request	Planned	Request by a Transit traveler to summon assistance, request transit information, or request any other transit services.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
YCAT Kiosks	YCAT Transit Passes	payment device update	Planned	Information updated concerning traveler's personal data including name, address, user account information, trip records, and profile data.
YCAT Kiosks	YCAT Transit Passes	request for payment	Planned	Request to deduct cost of service from user's payment account.
YCAT Kiosks	YCAT Website	trip confirmation	Planned	Acknowledgement by the driver/traveler of acceptance of a trip plan with associated personal and payment information required to confirm reservations. Conversely, this flow may also reject the proposed trip plan. Confirmations include the selected route and subsequent trip confirmation messages will be issued for route changes.
YCAT Kiosks	YCAT Website	trip request	Planned	Request for trip planning services that identifies the trip origin, destination(s), timing, preferences, and constraints. The request may also include the requestor's location or a request for transit and parking reservations, electric charging station access, and ridesharing options associated with the trip. The trip request also covers requests to revise a previously planned trip and interim updates that are provided as the trip is interactively planned.
YCAT Kiosks	Yuma County Area Transit (YCAT)	authorization request	Planned	Request to determine if a transportation user is authorized to use a particular transportation resource.
YCAT Kiosks	Yuma County Area Transit (YCAT)	fare collection data	Planned	Fare collection information including the summary of fare system data and financial payment transaction data.
YCAT Kiosks	Yuma County Area Transit (YCAT)	transit information user request	Planned	Request for special transit routing, real-time schedule information, and availability information.
YCAT Kiosks	Yuma County Area Transit (YCAT)	transit traveler request	Planned	Request by a Transit traveler to summon assistance, request transit information, or request any other transit services.
YCAT Transit Passes	Cities and Towns Transit Dispatch	authorization request	Planned	Request to determine if a transportation user is authorized to use a particular transportation resource.
YCAT Transit Passes	Cities and Towns Transit Dispatch	fare collection data	Planned	Fare collection information including the summary of fare system data and financial payment transaction data.
YCAT Transit Passes	Local Dial-A-Ride Transit Dispatchers	authorization request	Planned	Request to determine if a transportation user is authorized to use a particular transportation resource.
YCAT Transit Passes	Local Dial-A-Ride Transit Dispatchers	fare collection data	Planned	Fare collection information including the summary of fare system data and financial payment transaction data.
YCAT Transit Passes	Local Dial-A-Ride Transit Vehicles	payment device information	Planned	Traveler payment information such as card number and previous transactions.
YCAT Transit Passes	Payment Administration Center	authorization request	Planned	Request to determine if a transportation user is authorized to use a particular transportation resource.
YCAT Transit Passes	Private Transit Routing Service Provider	actuate secure payment	Planned	Initiation of a payment action, ideally based on an encrypted token or biometric marker. Such a payment action could be a simple validation that the secure token allows the user access to the travel resource, or it could be the initiation of a payment transaction.
YCAT Transit Passes	Private Transit Routing Service Provider	payment device information	Planned	Traveler payment information such as card number and previous transactions.
YCAT Transit Passes	Transit Providers Dispatch (Public and Private)	authorization request	Planned	Request to determine if a transportation user is authorized to use a particular transportation resource.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
YCAT Transit Passes	Transit Providers Dispatch (Public and Private)	fare collection data	Planned	Fare collection information including the summary of fare system data and financial payment transaction data.
YCAT Transit Passes	Transit Providers Dispatch (Public and Private)	transit stop request	Planned	Notification that a transit stop has been requested by a transit user at a roadside stop. This flow identifies the route, stop, and the time of the request.
YCAT Transit Passes	Transit Providers Vehicles (Public and Private)	actuate secure payment	Planned	Initiation of a payment action, ideally based on an encrypted token or biometric marker. Such a payment action could be a simple validation that the secure token allows the user access to the travel resource, or it could be the initiation of a payment transaction.
YCAT Transit Passes	Transit Providers Vehicles (Public and Private)	payment device information	Planned	Traveler payment information such as card number and previous transactions.
YCAT Transit Passes	Traveler Card-Smartcard	payment device update	Planned	Information updated concerning traveler's personal data including name, address, user account information, trip records, and profile data.
YCAT Transit Passes	Traveler Card-Smartcard	request for payment	Planned	Request to deduct cost of service from user's payment account.
YCAT Transit Passes	Travelers	traveler interface updates	Existing	Visual or audio information (e.g., routes, messages, guidance, emergency information) that is provided to the traveler.
YCAT Transit Passes	Tribal Transit Centers	authorization request	Planned	Request to determine if a transportation user is authorized to use a particular transportation resource.
YCAT Transit Passes	Tribal Transit Centers	fare collection data	Planned	Fare collection information including the summary of fare system data and financial payment transaction data.
YCAT Transit Passes	Tribal Transit Vehicles	payment device information	Planned	Traveler payment information such as card number and previous transactions.
YCAT Transit Passes	YCAT Buses	actuate secure payment	Planned	Initiation of a payment action, ideally based on an encrypted token or biometric marker. Such a payment action could be a simple validation that the secure token allows the user access to the travel resource, or it could be the initiation of a payment transaction.
YCAT Transit Passes	YCAT Buses	payment device information	Planned	Traveler payment information such as card number and previous transactions.
YCAT Transit Passes	YCAT Kiosks	actuate secure payment	Planned	Initiation of a payment action, ideally based on an encrypted token or biometric marker. Such a payment action could be a simple validation that the secure token allows the user access to the travel resource, or it could be the initiation of a payment transaction.
YCAT Transit Passes	YCAT Kiosks	payment device information	Planned	Traveler payment information such as card number and previous transactions.
YCAT Transit Passes	YCAT Website	trip confirmation	Planned	Acknowledgement by the driver/traveler of acceptance of a trip plan with associated personal and payment information required to confirm reservations. Conversely, this flow may also reject the proposed trip plan. Confirmations include the selected route and subsequent trip confirmation messages will be issued for route changes.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
YCAT Transit Passes	YCAT Website	trip request	Planned	Request for trip planning services that identifies the trip origin, destination(s), timing, preferences, and constraints. The request may also include the requestor's location or a request for transit and parking reservations, electric charging station access, and ridesharing options associated with the trip. The trip request also covers requests to revise a previously planned trip and interim updates that are provided as the trip is interactively planned.
YCAT Transit Passes	Yuma County Area Transit (YCAT)	authorization request	Planned	Request to determine if a transportation user is authorized to use a particular transportation resource.
YCAT Transit Passes	Yuma County Area Transit (YCAT)	fare collection data	Planned	Fare collection information including the summary of fare system data and financial payment transaction data.
YCAT Transit Passes	Yuma County Area Transit (YCAT)	transit stop request	Planned	Notification that a transit stop has been requested by a transit user at a roadside stop. This flow identifies the route, stop, and the time of the request.
YCAT Transit Passes	Yuma County Area Transit (YCAT)	transit traveler request	Planned	Request by a Transit traveler to summon assistance, request transit information, or request any other transit services.
YCAT Website	Cities and Towns Transit Dispatch	demand responsive transit request	Planned	Request for paratransit support.
YCAT Website	Cities and Towns Transit Dispatch	transit fare request	Planned	Request for fare information and transit fare payment.
YCAT Website	Cities and Towns Transit Dispatch	transit trip request	Planned	Request for a transit trip plan that is responsive to traveler requirements such as schedule, cost, or duration.
YCAT Website	Cities and Towns Transit Dispatch	trip confirmation	Planned	Acknowledgement by the driver/traveler of acceptance of a trip plan with associated personal and payment information required to confirm reservations. Conversely, this flow may also reject the proposed trip plan. Confirmations include the selected route and subsequent trip confirmation messages will be issued for route changes.
YCAT Website	County Transit Kiosks	trip plan	Planned	A travel itinerary covering single or multimodal travel. The itinerary identifies a route and associated traveler information and instructions identifying recommended trip modes (including indoor and outdoor wayfinding) and transfer information, ride sharing options, and transit and parking reservation information. This flow also includes intermediate information that is provided as the trip plan is interactively created, including identification of alternatives, requests for additional information as well as amenities along the trip.
YCAT Website	County Website and NIXLE	transit service information	Planned	Transit service information including routes, schedules, and fare information as well as dynamic transit schedule adherence and transit vehicle location information.
YCAT Website	Local Dial-A-Ride Transit Dispatchers	demand responsive transit request	Planned	Request for paratransit support.
YCAT Website	Local Dial-A-Ride Transit Dispatchers	transit fare request	Planned	Request for fare information and transit fare payment.
YCAT Website	Local Dial-A-Ride Transit Dispatchers	transit trip request	Planned	Request for a transit trip plan that is responsive to traveler requirements such as schedule, cost, or duration.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
YCAT Website	Local Dial-A-Ride Transit Dispatchers	trip confirmation	Planned	Acknowledgement by the driver/traveler of acceptance of a trip plan with associated personal and payment information required to confirm reservations. Conversely, this flow may also reject the proposed trip plan. Confirmations include the selected route and subsequent trip confirmation messages will be issued for route changes.
YCAT Website	MPO-COG Planning Traffic Database	traveler archive data	Planned	Data associated with traveler information services including service requests, facility usage, rideshare, routing, and traveler payment transaction data. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
YCAT Website	Payment Administration Center	account updates	Planned	Updates to an account, such as purchases, uses, cancellation, secureID changes or similar material changes to account information.
YCAT Website	Payment Administration Center	smart card reconciliation	Planned	Detailed list of charges of the form charge/transport provider, taken from a smart card that need to be applied to the listed providers.
YCAT Website	Payment Administration Center	trip access coordination	Planned	Access token granting the bearer the right to use a given transportation resource; typically used when one payment provider is paid for a trip using multiple travel providers; the token is used by the Traveler to gain access to one or more of the travel provider resource (e.g., a transit ride).
YCAT Website	Personal Information Devices for Travelers	broadcast traveler information	Planned	General traveler information that contains traffic and road conditions, link travel times, incidents, advisories, restrictions, vehicle requirements, work zones, transit service information, weather information, parking information, and other related traveler information.
YCAT Website	Personal Information Devices for Travelers	interactive traveler information	Planned	Traveler information provided in response to a traveler request. The provided information includes traffic and road conditions, advisories, incidents, restrictions, payment information, transit services, parking information, weather information, and other travel-related data updates and confirmations.
YCAT Website	Personal Information Devices for Travelers	trip plan	Planned	A travel itinerary covering single or multimodal travel. The itinerary identifies a route and associated traveler information and instructions identifying recommended trip modes (including indoor and outdoor wayfinding) and transfer information, ride sharing options, and transit and parking reservation information. This flow also includes intermediate information that is provided as the trip plan is interactively created, including identification of alternatives, requests for additional information as well as amenities along the trip.
YCAT Website	Private Transit Routing Service Provider	emergency traveler information	Planned	Public notification of an emergency such as a natural or man-made disaster, civil emergency, or child abduction. This flow also includes evacuation information including evacuation instructions, evacuation zones, recommended evacuation times, tailored evacuation routes and destinations, traffic and road conditions along the evacuation routes, traveler services and shelter information, and reentry times and instructions.
YCAT Website	Private Transit Routing Service Provider	interactive traveler information	Planned	Traveler information provided in response to a traveler request. The provided information includes traffic and road conditions, advisories, incidents, restrictions, payment information, transit services, parking information, weather information, and other travel-related data updates and confirmations.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
YCAT Website	Private Transit Routing Service Provider	trip plan	Planned	A travel itinerary covering single or multimodal travel. The itinerary identifies a route and associated traveler information and instructions identifying recommended trip modes (including indoor and outdoor wayfinding) and transfer information, ride sharing options, and transit and parking reservation information. This flow also includes intermediate information that is provided as the trip plan is interactively created, including identification of alternatives, requests for additional information as well as amenities along the trip.
YCAT Website	Public Private Traveler Information	emergency traveler information	Planned	Public notification of an emergency such as a natural or man-made disaster, civil emergency, or child abduction. This flow also includes evacuation information including evacuation instructions, evacuation zones, recommended evacuation times, tailored evacuation routes and destinations, traffic and road conditions along the evacuation routes, traveler services and shelter information, and reentry times and instructions.
YCAT Website	Public Private Traveler Information	transit service information	Planned	Transit service information including routes, schedules, and fare information as well as dynamic transit schedule adherence and transit vehicle location information.
YCAT Website	Transit Providers Dispatch (Public and Private)	demand responsive transit request	Planned	Request for paratransit support.
YCAT Website	Transit Providers Dispatch (Public and Private)	transit fare request	Planned	Request for fare information and transit fare payment.
YCAT Website	Transit Providers Dispatch (Public and Private)	transit trip request	Planned	Request for a transit trip plan that is responsive to traveler requirements such as schedule, cost, or duration.
YCAT Website	Transit Providers Dispatch (Public and Private)	trip confirmation	Planned	Acknowledgement by the driver/traveler of acceptance of a trip plan with associated personal and payment information required to confirm reservations. Conversely, this flow may also reject the proposed trip plan. Confirmations include the selected route and subsequent trip confirmation messages will be issued for route changes.
YCAT Website	Tribal Transit Centers	transit fare request	Planned	Request for fare information and transit fare payment.
YCAT Website	YCAT Kiosks	trip plan	Planned	A travel itinerary covering single or multimodal travel. The itinerary identifies a route and associated traveler information and instructions identifying recommended trip modes (including indoor and outdoor wayfinding) and transfer information, ride sharing options, and transit and parking reservation information. This flow also includes intermediate information that is provided as the trip plan is interactively created, including identification of alternatives, requests for additional information as well as amenities along the trip.
YCAT Website	YCAT Transit Passes	trip plan	Planned	A travel itinerary covering single or multimodal travel. The itinerary identifies a route and associated traveler information and instructions identifying recommended trip modes (including indoor and outdoor wayfinding) and transfer information, ride sharing options, and transit and parking reservation information. This flow also includes intermediate information that is provided as the trip plan is interactively created, including identification of alternatives, requests for additional information as well as amenities along the trip.
YCAT Website	Yuma County Area Transit (YCAT)	demand responsive transit request	Existing	Request for paratransit support.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
YCAT Website	Yuma County Area Transit (YCAT)	transit fare request	Planned	Request for fare information and transit fare payment.
YCAT Website	Yuma County Area Transit (YCAT)	transit trip request	Planned	Request for a transit trip plan that is responsive to traveler requirements such as schedule, cost, or duration.
YCAT Website	Yuma County Area Transit (YCAT)	trip confirmation	Planned	Acknowledgement by the driver/traveler of acceptance of a trip plan with associated personal and payment information required to confirm reservations. Conversely, this flow may also reject the proposed trip plan. Confirmations include the selected route and subsequent trip confirmation messages will be issued for route changes.
Yuma County Area Transit (YCAT)	Cities and Towns EOC-EMC	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Yuma County Area Transit (YCAT)	Cities and Towns EOC-EMC	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
Yuma County Area Transit (YCAT)	Cities and Towns EOC-EMC	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Yuma County Area Transit (YCAT)	Cities and Towns EOC-EMC	emergency transit schedule information	Existing	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
Yuma County Area Transit (YCAT)	Cities and Towns EOC-EMC	emergency transit service response	Existing	Response indicating changes to transit service, fares, and/or restrictions that will be made and status of transit resources to be deployed to support emergency response and/or evacuation.
Yuma County Area Transit (YCAT)	Cities and Towns EOC-EMC	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Yuma County Area Transit (YCAT)	Cities and Towns EOC-EMC	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Yuma County Area Transit (YCAT)	Cities and Towns EOC-EMC	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Yuma County Area Transit (YCAT)	Cities and Towns EOC-EMC	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Yuma County Area Transit (YCAT)	Cities and Towns EOC-EMC	transit system status assessment	Planned	Assessment of damage sustained by the public transportation system including location and extent of the damage, current operational status including an estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Yuma County Area Transit (YCAT)	Cities and Towns EOC-EMC	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Yuma County Area Transit (YCAT)	Cities and Towns Police and Fire Dispatch	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Yuma County Area Transit (YCAT)	Cities and Towns Police and Fire Dispatch	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
Yuma County Area Transit (YCAT)	Cities and Towns Police and Fire Dispatch	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Yuma County Area Transit (YCAT)	Cities and Towns Police and Fire Dispatch	emergency transit schedule information	Existing	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
Yuma County Area Transit (YCAT)	Cities and Towns Police and Fire Dispatch	emergency transit service response	Existing	Response indicating changes to transit service, fares, and/or restrictions that will be made and status of transit resources to be deployed to support emergency response and/or evacuation.
Yuma County Area Transit (YCAT)	Cities and Towns Police and Fire Dispatch	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Yuma County Area Transit (YCAT)	Cities and Towns Police and Fire Dispatch	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Yuma County Area Transit (YCAT)	Cities and Towns Police and Fire Dispatch	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.

Yuma County Area Transit (YCAT)	Cities and Towns Police and Fire Dispatch	transit system status assessment	Planned	Assessment of damage sustained by the public transportation system including location and extent of the damage, current operational status including an estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Yuma County Area Transit (YCAT)	Cities and Towns Police and Fire Dispatch	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Yuma County Area Transit (YCAT)	Cities and Towns TIC and Website	emergency transit schedule information	Existing	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
Yuma County Area Transit (YCAT)	Cities and Towns Transit Dispatch	transit fare coordination	Planned	Fare and pricing information shared between local/regional transit organizations.
Yuma County Area Transit (YCAT)	Cities and Towns Transit Dispatch	transit service coordination	Existing	Schedule coordination or AVL information shared between local/regional transit organizations. This includes coordination of connections and control parameters between transit properties as well as coordination of transit-related maintenance activities.
Yuma County Area Transit (YCAT)	Cities and Towns Transit Dispatch	transit traveler information coordination	Planned	Transit schedules, real-time arrival information, fare schedules, and general transit service information shared between transit organizations to support transit traveler information systems.
Yuma County Area Transit (YCAT)	County EMC-EOC	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Yuma County Area Transit (YCAT)	County EMC-EOC	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
Yuma County Area Transit (YCAT)	County EMC-EOC	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Yuma County Area Transit (YCAT)	County EMC-EOC	emergency transit schedule information	Existing	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
Yuma County Area Transit (YCAT)	County EMC-EOC	emergency transit service response	Existing	Response indicating changes to transit service, fares, and/or restrictions that will be made and status of transit resources to be deployed to support emergency response and/or evacuation.
Yuma County Area Transit (YCAT)	County EMC-EOC	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Yuma County Area Transit (YCAT)	County EMC-EOC	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
Yuma County Area Transit (YCAT)	County EMC-EOC	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Yuma County Area Transit (YCAT)	County EMC-EOC	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Yuma County Area Transit (YCAT)	County EMC-EOC	transit system status assessment	Planned	Assessment of damage sustained by the public transportation system including location and extent of the damage, current operational status including an estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Yuma County Area Transit (YCAT)	County EMC-EOC	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Yuma County Area Transit (YCAT)	County Transit Kiosks	authorization response	Planned	Notification of status of authorization request.
Yuma County Area Transit (YCAT)	County Transit Kiosks	fare management information	Planned	Transit fare information and transaction data used to manage transit fare processing.
Yuma County Area Transit (YCAT)	County Transit Kiosks	transit traveler information	Planned	Transit information prepared to support transit users and other travelers. It contains transit schedules, real-time arrival information, fare schedules, alerts and advisories, and general transit service information.
Yuma County Area Transit (YCAT)	County Website and NIXLE	emergency transit schedule information	Planned	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Yuma County Area Transit (YCAT)	County Website and NIXLE	transit and fare schedules	Planned	Transit service information including routes, schedules, and fare information. This also includes on-demand service information.
Yuma County Area Transit (YCAT)	County Website and NIXLE	transit fare coordination	Planned	Fare and pricing information shared between local/regional transit organizations.
Yuma County Area Transit (YCAT)	County Website and NIXLE	transit fare information	Planned	Information provided by transit management that supports fare payment transactions.
Yuma County Area Transit (YCAT)	County Website and NIXLE	transit service coordination	Planned	Schedule coordination or AVL information shared between local/regional transit organizations. This includes coordination of connections and control parameters between transit properties as well as coordination of transit-related maintenance activities.
Yuma County Area Transit (YCAT)	County Website and NIXLE	transit traveler information coordination	Planned	Transit schedules, real-time arrival information, fare schedules, and general transit service information shared between transit organizations to support transit traveler information systems.
Yuma County Area Transit (YCAT)	County Website and NIXLE	transit trip plan	Planned	An origin-destination transit trip that may involve multiple modes and connections.
Yuma County Area Transit (YCAT)	DEMA SEOC Arizona DEM Military Affairs	alert notification coordination	Existing	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
Yuma County Area Transit (YCAT)	DEMA SEOC Arizona DEM Military Affairs	alert status	Existing	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
Yuma County Area Transit (YCAT)	DEMA SEOC Arizona DEM Military Affairs	emergency plan coordination	Existing	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
Yuma County Area Transit (YCAT)	DEMA SEOC Arizona DEM Military Affairs	emergency transit schedule information	Existing	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
Yuma County Area Transit (YCAT)	DEMA SEOC Arizona DEM Military Affairs	emergency transit service response	Existing	Response indicating changes to transit service, fares, and/or restrictions that will be made and status of transit resources to be deployed to support emergency response and/or evacuation.
Yuma County Area Transit (YCAT)	DEMA SEOC Arizona DEM Military Affairs	evacuation coordination	Existing	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
Yuma County Area Transit (YCAT)	DEMA SEOC Arizona DEM Military Affairs	incident command information coordination	Planned	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Yuma County Area Transit (YCAT)	DEMA SEOC Arizona DEM Military Affairs	incident response coordination	Planned	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
Yuma County Area Transit (YCAT)	DEMA SEOC Arizona DEM Military Affairs	resource coordination	Planned	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
Yuma County Area Transit (YCAT)	DEMA SEOC Arizona DEM Military Affairs	transit system status assessment	Planned	Assessment of damage sustained by the public transportation system including location and extent of the damage, current operational status including an estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Yuma County Area Transit (YCAT)	DEMA SEOC Arizona DEM Military Affairs	transportation system status	Planned	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
Yuma County Area Transit (YCAT)	Financial Institution	payment request	Planned	Request for payment from financial institution or related financial service requests (e.g., balance inquiry)
Yuma County Area Transit (YCAT)	Independent School District Bus Dispatch	transit service coordination	Planned	Schedule coordination or AVL information shared between local/regional transit organizations. This includes coordination of connections and control parameters between transit properties as well as coordination of transit-related maintenance activities.
Yuma County Area Transit (YCAT)	Local Dial-A-Ride Transit Dispatchers	transit fare coordination	Planned	Fare and pricing information shared between local/regional transit organizations.
Yuma County Area Transit (YCAT)	Local Dial-A-Ride Transit Dispatchers	transit service coordination	Planned	Schedule coordination or AVL information shared between local/regional transit organizations. This includes coordination of connections and control parameters between transit properties as well as coordination of transit-related maintenance activities.
Yuma County Area Transit (YCAT)	Local Dial-A-Ride Transit Dispatchers	transit traveler information coordination	Planned	Transit schedules, real-time arrival information, fare schedules, and general transit service information shared between transit organizations to support transit traveler information systems.
Yuma County Area Transit (YCAT)	MPO-COG Planning Traffic Database	archived data product requests	Planned	A user-specified request for archived data products (i.e., data, meta data, or data catalogs). The request also includes information that is used to identify and authenticate the user and support electronic payment requirements, if any.
Yuma County Area Transit (YCAT)	MPO-COG Planning Traffic Database	transit archive data	Planned	Data used to describe and monitor transit demand, fares, operations, and system performance. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
Yuma County Area Transit (YCAT)	Payment Administration Center	account updates	Planned	Updates to an account, such as purchases, uses, cancellation, secureID changes or similar material changes to account information.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Yuma County Area Transit (YCAT)	Payment Administration Center	smart card reconciliation	Planned	Detailed list of charges of the form charge/transport provider, taken from a smart card that need to be applied to the listed providers.
Yuma County Area Transit (YCAT)	Payment Administration Center	trip access coordination	Planned	Access token granting the bearer the right to use a given transportation resource; typically used when one payment provider is paid for a trip using multiple travel providers; the token is used by the Traveler to gain access to one or more of the travel provider resource (e.g., a transit ride).
Yuma County Area Transit (YCAT)	Personal Information Devices for Travelers	personal transit information	Planned	General and personalized transit information for a particular fixed route, flexible route, or paratransit system.
Yuma County Area Transit (YCAT)	Personal Information Devices for Travelers	traveler payment request	Planned	Request for information supporting payments. For fee structures that include incentives, the request may support either an account debit or an account credit or reimbursement.
Yuma County Area Transit (YCAT)	Personal Information Devices for Travelers	trip plan	Planned	A travel itinerary covering single or multimodal travel. The itinerary identifies a route and associated traveler information and instructions identifying recommended trip modes (including indoor and outdoor wayfinding) and transfer information, ride sharing options, and transit and parking reservation information. This flow also includes intermediate information that is provided as the trip plan is interactively created, including identification of alternatives, requests for additional information as well as amenities along the trip.
Yuma County Area Transit (YCAT)	Personal Information Devices for Travelers	user account reports	Planned	Reports on services offered/provided and associated charges.
Yuma County Area Transit (YCAT)	Private Transit Routing Service Provider	authorization response	Planned	Notification of status of authorization request.
Yuma County Area Transit (YCAT)	Private Transit Routing Service Provider	fare management information	Planned	Transit fare information and transaction data used to manage transit fare processing.
Yuma County Area Transit (YCAT)	Private Transit Routing Service Provider	personal transit information	Planned	General and personalized transit information for a particular fixed route, flexible route, or paratransit system.
Yuma County Area Transit (YCAT)	Private Transit Routing Service Provider	transit traveler information	Planned	Transit information prepared to support transit users and other travelers. It contains transit schedules, real-time arrival information, fare schedules, alerts and advisories, and general transit service information.
Yuma County Area Transit (YCAT)	Private Transit Routing Service Provider	traveler payment request	Planned	Request for information supporting payments. For fee structures that include incentives, the request may support either an account debit or an account credit or reimbursement.
Yuma County Area Transit (YCAT)	Private Transit Routing Service Provider	trip plan	Planned	A travel itinerary covering single or multimodal travel. The itinerary identifies a route and associated traveler information and instructions identifying recommended trip modes (including indoor and outdoor wayfinding) and transfer information, ride sharing options, and transit and parking reservation information. This flow also includes intermediate information that is provided as the trip plan is interactively created, including identification of alternatives, requests for additional information as well as amenities along the trip.
Yuma County Area Transit (YCAT)	Private Transit Routing Service Provider	user account reports	Planned	Reports on services offered/provided and associated charges.
Yuma County Area Transit (YCAT)	Public Private Traveler Information	demand responsive transit plan	Existing	Plan regarding overall demand responsive transit schedules and deployment.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Yuma County Area Transit (YCAT)	Public Private Traveler Information	emergency transit schedule information	Existing	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
Yuma County Area Transit (YCAT)	Public Private Traveler Information	transit and fare schedules	Planned	Transit service information including routes, schedules, and fare information. This also includes on-demand service information.
Yuma County Area Transit (YCAT)	Public Private Traveler Information	transit fare information	Planned	Information provided by transit management that supports fare payment transactions.
Yuma County Area Transit (YCAT)	Public Private Traveler Information	transit schedule adherence information	Planned	Dynamic transit schedule adherence and transit vehicle location information.
Yuma County Area Transit (YCAT)	Public Private Traveler Information	transit trip plan	Planned	An origin-destination transit trip that may involve multiple modes and connections.
Yuma County Area Transit (YCAT)	Transit Providers Dispatch (Public and Private)	transit fare coordination	Planned	Fare and pricing information shared between local/regional transit organizations.
Yuma County Area Transit (YCAT)	Transit Providers Dispatch (Public and Private)	transit service coordination	Planned	Schedule coordination or AVL information shared between local/regional transit organizations. This includes coordination of connections and control parameters between transit properties as well as coordination of transit-related maintenance activities.
Yuma County Area Transit (YCAT)	Transit Providers Dispatch (Public and Private)	transit traveler information coordination	Planned	Transit schedules, real-time arrival information, fare schedules, and general transit service information shared between transit organizations to support transit traveler information systems.
Yuma County Area Transit (YCAT)	Tribal Transit Centers	transit fare coordination	Planned	Fare and pricing information shared between local/regional transit organizations.
Yuma County Area Transit (YCAT)	Tribal Transit Centers	transit service coordination	Planned	Schedule coordination or AVL information shared between local/regional transit organizations. This includes coordination of connections and control parameters between transit properties as well as coordination of transit-related maintenance activities.
Yuma County Area Transit (YCAT)	Tribal Transit Centers	transit traveler information coordination	Planned	Transit schedules, real-time arrival information, fare schedules, and general transit service information shared between transit organizations to support transit traveler information systems.
Yuma County Area Transit (YCAT)	YCAT Buses	alarm acknowledge	Existing	Confirmation that alarm was received, instructions and additional information for the alarm initiator, and requests for additional information.
Yuma County Area Transit (YCAT)	YCAT Buses	authorization response	Planned	Notification of status of authorization request.
Yuma County Area Transit (YCAT)	YCAT Buses	fare management information	Planned	Transit fare information and transaction data used to manage transit fare processing.
Yuma County Area Transit (YCAT)	YCAT Buses	remote vehicle disable	Planned	Signal used to remotely disable a transit vehicle.
Yuma County Area Transit (YCAT)	YCAT Buses	transit schedule information	Existing	Current and projected transit schedule information used to initialize the transit vehicle with a vehicle assignment, monitor schedule performance, and develop corrective actions on-board.
Yuma County Area Transit (YCAT)	YCAT Buses	transit stop request	Planned	Notification that a transit stop has been requested by a transit user at a roadside stop. This flow identifies the route, stop, and the time of the request.

Source Element	Destination Element	Flow Name	Flow Status	Flow Description
Yuma County Area Transit (YCAT)	YCAT Buses	transit traveler information	Existing	Transit information prepared to support transit users and other travelers. It contains transit schedules, real-time arrival information, fare schedules, alerts and advisories, and general transit service information.
Yuma County Area Transit (YCAT)	YCAT Buses	transit vehicle operator authentication update	Planned	Results of authentication process or update of on-board authentication database.
Yuma County Area Transit (YCAT)	YCAT Buses	transit vehicle operator information	Existing	Transit service instructions, wide area alerts, traffic information, road conditions, and other information for both transit and paratransit operators.
Yuma County Area Transit (YCAT)	YCAT Kiosks	authorization response	Planned	Notification of status of authorization request.
Yuma County Area Transit (YCAT)	YCAT Kiosks	fare management information	Planned	Transit fare information and transaction data used to manage transit fare processing.
Yuma County Area Transit (YCAT)	YCAT Kiosks	transit traveler information	Planned	Transit information prepared to support transit users and other travelers. It contains transit schedules, real-time arrival information, fare schedules, alerts and advisories, and general transit service information.
Yuma County Area Transit (YCAT)	YCAT Transit Passes	authorization response	Planned	Notification of status of authorization request.
Yuma County Area Transit (YCAT)	YCAT Transit Passes	fare management information	Planned	Transit fare information and transaction data used to manage transit fare processing.
Yuma County Area Transit (YCAT)	YCAT Transit Passes	transit traveler information	Planned	Transit information prepared to support transit users and other travelers. It contains transit schedules, real-time arrival information, fare schedules, alerts and advisories, and general transit service information.
Yuma County Area Transit (YCAT)	YCAT Website	demand responsive transit plan	Existing	Plan regarding overall demand responsive transit schedules and deployment.
Yuma County Area Transit (YCAT)	YCAT Website	emergency transit schedule information	Existing	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
Yuma County Area Transit (YCAT)	YCAT Website	transit and fare schedules	Planned	Transit service information including routes, schedules, and fare information. This also includes on-demand service information.
Yuma County Area Transit (YCAT)	YCAT Website	transit fare information	Planned	Information provided by transit management that supports fare payment transactions.
Yuma County Area Transit (YCAT)	YCAT Website	transit incident information	Planned	Information on transit incidents that impact transit services for public dissemination.
Yuma County Area Transit (YCAT)	YCAT Website	transit probe data	Planned	Aggregate probe data derived from tracking transit vehicles. Data collected could include transit vehicle speeds and travel times for a given link or collection of links.
Yuma County Area Transit (YCAT)	YCAT Website	transit schedule adherence information	Existing	Dynamic transit schedule adherence and transit vehicle location information.
Yuma County Area Transit (YCAT)	YCAT Website	transit trip plan	Planned	An origin-destination transit trip that may involve multiple modes and connections.

Appendix H – Information Flow Diagrams Contained in the RAD-IT Database

List of Figures

Stakeholder Transportation Element with defined functions	Subsystem Box Subsystems are individual pieces of the Intelligent Transportation System defined by ARC-IT. Subsystems are defined at three levels of hierarchy: ITS Objects, Classes, and Functional Subsystems. They are the principle structural element of the physical view of ARC-IT.
Stakeholder Transportation Element with no defined functions	Terminator Box Terminators define the boundary of an architecture. ARC-IT terminators represent the people, systems, and general environment that interface to ITS. The interfaces between terminators and the subsystems and processes within ARC-IT are defined, but no functional requirements are allocated to terminators. The functional and physical view of ARC-IT both contain the same set of terminators.
Communications Element	Communications Box Some of the physical objects defined in ARC-IT primarily provide a communications capability that enables other physical objects to share information.

Information Flow Definitions

Flow Name	Description
accident report	Report of commercial vehicle safety accident. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
account updates	Updates to an account, such as purchases, uses, cancellation, secureID changes or similar material changes to account information.
actuate secure payment	Initiation of a payment action, ideally based on an encrypted token or biometric marker. Such a payment action could be a simple validation that the secure token allows the user access to the travel resource, or it could be the initiation of a payment transaction.
air quality information	Aggregated region-wide measured air quality data and possible pollution incident information.
alarm acknowledge	Confirmation that alarm was received, instructions and additional information for the alarm initiator, and requests for additional information.
alarm notification	Notification of activation of an audible or silent alarm by a traveler in a public area or by a transit vehicle operator using an on-board device.
alert notification	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This flow may also identify specific information that should not be released to the public.
alert notification coordination	Coordination of emergency alerts to be distributed to the public. This includes notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public and status of the public notification.
alert notification for social media	Notification of a major emergency such as a natural or man-made disaster, civil emergency, or child abduction for distribution to the public via social media. The flow identifies the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. This version of the flow contains only publicly available information and is structured and formatted for publication on specific social media platforms and other public-facing sites.
alert status	Information indicating the current status of the emergency alert including identification of the traveler and driver information systems that are being used to provide the alert.
alerts and advisories	Assessments (general incident and vulnerability awareness information), advisories (identification of threats or recommendations to increase preparedness levels), and alerts (information on imminent or in-progress emergencies). This flow also provides supporting descriptive detail on incidents, threats, and vulnerabilities to increase preparedness and support effective response to threats against the surface transportation system.
alternate mode information	Schedule information for alternate mode transportation providers such as air, ferry, and passenger-carrying heavy rail. This also includes details of incidents and other service disruptions that have occurred in the alternative mode. This also includes measures of service demand that supports assessment of their impact on the road network.
archive analysis requests	A user request that initiates data mining, analytical processing, aggregation or summarization, report formulation, or other advanced processing and analysis of archived data. The request also includes information that is used to identify and authenticate the user and support electronic payment requirements, if any.
archive analysis results	Processed information products, supporting meta data, and any associated transaction information resulting from data mining, analytical processing, aggregation or summarization, report formulation, or other on-line processing and analysis of archived data.
archive coordination	Catalog data, meta data, published data, and other information exchanged between archives to support data synchronization and satisfy user data requests.
archive request confirmation	Confirmation that an archive request has been received and processed with information on the disposition of the request.
archive status	Notification that data provided to an archive contains erroneous, missing, or suspicious data or verification that the data provided appears valid. If an error has been detected, the offending data and the nature of the potential problem are identified.
archived data product requests	A user-specified request for archived data products (i.e., data, meta data, or data catalogs). The request also includes information that is used to identify and authenticate the user and support electronic payment requirements, if any.
archived data products	Raw or processed data, meta data, data catalogs and other data products provided to a user system upon request. The response may also include any associated transaction information.

Flow Name	Description
arrival notification	Notification of arrival (and departure) of a motor vehicle at the inspection station.
asset archive data	Information describing transportation assets including pavements, bridges, and all other infrastructure included in the transportation network. In addition, information can cover support assets (support equipment and systems, software, etc.). Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
asset damage assessment	Information indicating the damage sustained by transportation assets, derived from aerial surveillance, field reports, inspections, tests, and analyses.
asset inventory	Information on pavement, bridges, signs and other assets. This includes asset location, installation information, materials information, vendor/contractor information, current maintenance status, and a variety of other information (e.g., video logs) that define the transportation infrastructure.
asset restrictions	Restrictions levied on transportation asset usage based on infrastructure design, surveys, tests, or analyses. This includes standard height, width, and weight restrictions by facility as well as special restrictions such as spring weight restrictions and temporary bridge weight restrictions.
asset status update	Changes to status of pavement, bridges, signs and other assets resulting from maintenance or construction activities or infrastructure monitoring. The updates may include changes in installation information, materials information, vendor/contractor information, condition, and current maintenance status. In addition to infrastructure asset updates, the information provided may also include status of the maintenance and construction support assets, including vehicle and equipment utilization and repair records.
audit data	Information to support a tax audit.
authorization request	Request to determine if a transportation user is authorized to use a particular transportation resource.
authorization response	Notification of status of authorization request.
automated lane control data	Control commands and operating parameters for automated vehicle operations, including tightly coupled platooned groups of vehicles operating in dedicated or mixed-mode lanes. This flow includes platoon parameters including maximum platoon size, target speeds and gaps, and vehicle restrictions.
automated lane status	Current operational status of lanes supporting automated vehicle operations. The flow includes the status of the RSEs, associated field equipment, and vehicles using the facility.
barrier system control	Information used to configure and control barrier systems that are represented by gates, barriers and other automated or remotely controlled systems used to manage entry to roadways.
barrier system coordination	The direct flow of information between field equipment. This includes information used to configure and control barrier systems that are represented by gates, barriers and other automated or remotely controlled systems used to manage entry to roadways. Current operating status of barrier systems is also shared including operating condition and current operational state.
barrier system status	Current operating status of barrier systems. Barrier systems represent gates, barriers and other automated or remotely controlled systems used to manage entry to roadways. Status of the systems includes operating condition and current operational state.
border card data	Personal identification data from ID cards used by travelers at border crossings.
border clearance status	Notification regarding the crossing status of commercial freight shipment scheduled to enter the U.S. Includes portions of border agency and transportation agency clearance results, as those results become available.
border crossing status information	Port of entry status including current wait-times, lane configuration and status including closures and restrictions, and notification of incidents at the border
border information archive data	Border inspection activities data. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
border security input	Information regarding security related events occurring at the border.
broadcast advisories	General broadcast advisories that are provided over wide-area wireless communications direct to the vehicle radio. These analog advisory messages may provide similar content to ITS broadcast information flows, but include no digital data component. Existing Highway-Advisory Radio (HAR) advisory messages are a prime example of this flow.

Flow Name	Description
broadcast traveler information	General traveler information that contains traffic and road conditions, link travel times, incidents, advisories, restrictions, vehicle requirements, work zones, transit service information, weather information, parking information, and other related traveler information.
carrier participation report	Report that summarizes motor carrier participation in CVO programs. Used to identify the level of active participation and to report which enrolled carriers are not participating as expected.
center status	Represents the interactive monitoring of system operations by the Service Monitor. It includes device housekeeping/heartbeat monitoring and network monitoring information, the status of installed applications, and the configuration of managed devices.
citation	Report of commercial vehicle citation. The citation includes references to the statute(s) that was (were) violated. It includes information on the violator and the officer issuing the citation. A citation differs from a violation because it is adjudicated by the courts. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
clearance notification	Notification that cargo has been cleared through customs.
client verification information	Information about carriers who have made border credential applications such as commercial drivers license information and carrier safety status.
client verification request	Request for information such as commercial drivers license information and carrier safety status.
commercial vehicle archive data	Information describing commercial vehicle travel and commodity flow characteristics. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
commercial vehicle incident notification	Information about a Commercial Vehicle or Freight Equipment breach, non-permitted security sensitive hazmat detected at the roadside, route deviation, or Commercial Vehicle Driver / Commercial Vehicle / Freight Equipment assignment mismatches which includes the location of the Commercial Vehicle and appropriate identities. May carry information that enables incident reporting to responders, and also includes the type of vehicle and cargo concerned.
commercial vehicle permit	Commercial vehicle permits including those for oversize, overweight, or hazmat shipments.
commercial vehicle permit information	Information for commercial vehicle permits for oversize, overweight, or for dangerous goods. The query flow is not explicitly shown.
commercial vehicle trip information	Information about vehicle trips including load information, location, speed, and routing. The information would be sanitized for distribution outside of the commercial vehicle company.
commercial vehicle violation notification	Notification of a violation. The violation notification flow describes the statute or regulation that was violated and how it was violated (e. g., overweight on specific axle by xxx pounds or which brake was out of adjustment and how far out of adjustment it was). A violation differs from a citation because it is not adjudicated by the courts. It specifically includes the date/time and location of the violation and identification of the vehicle, driver, and associated equipment/cargo.
communications signature	Communications from vehicle or personal devices that can be monitored by ITS field equipment to uniquely identify the device. This flow represents communications from devices (via Bluetooth or Wi-Fi) that may be monitored by ITS field equipment or any other passive or active communications from the device that can be used to identify the device. This flow specifically covers passive monitoring of device communications.
compliance review report	Report containing results of carrier compliance review, including concomitant out-of-service notifications, carrier warnings/notifications. The information may be provided as a response to a real-time query of proactively by the source. The query flow is not explicitly shown.
consolidated agency response	Electronic manifest data as well as commercial vehicle screening results.
credential application	Application for commercial vehicle credentials. Authorization for payment is included. It contains details about the administrative request for a Freight Vehicle registration. It also carries the acknowledgement that a payment has been placed in the bank account of the administration by the Fleet Operator. This information flow includes fleet operator request ID, vehicle characteristics, transport need (origin and destination), electronic signature and date of payment.
credential fee coordination	Description of fees, taxes and similar charges related to commercial vehicle credentials. In US and Canada, this includes rates for credentials that are exchanged between agencies via IRP, IFTA, etc.

Flow Name	Description
credentials information	Response containing full vehicle fuel tax and registration credentials information. "Response" may be provided in reaction to a real-time query or a standing request for updated information. The query flow is not explicitly shown.
credentials status information	Credentials information such as registration, licensing, insurance, check flags, and electronic screening enrollment data. A unique identifier is included. Corresponds to the credentials portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
current charging status	Current charging status including current charge rate, estimated time to completion, and cost associated with the charge.
current infrastructure restrictions	Restrictions levied on transportation asset usage based on infrastructure design, surveys, tests, or analyses. This includes standard facility design height, width, and weight restrictions, special restrictions such as spring weight restrictions, and temporary facility restrictions that are imposed during maintenance and construction.
cv driver credential	Driver information (e.g., identity, biometrics, address, date of birth, endorsements, restrictions) stored on a driver's license or other official identification card used to identify a driver of commercial vehicles.
cv driver record	Information typically maintained by a state driver licensing agency about a driver of a commercial vehicle including driver identification data, license data, permit data, and driving history details. The query flow is not explicitly shown.
cv repair status	Information about the completion of a repair to a commercial vehicle.
daily site activity data	Record of daily activities at commercial vehicle check stations including summaries of screening events and inspections.
data collection and monitoring control	Information used to configure and control data collection and monitoring systems.
decision support information	Information provided to support effective and safe incident response, including local traffic, road, and weather conditions, hazardous material information, and the current status of resources (including vehicles, other equipment, supplies) that have been allocated to an incident.
demand response passenger and use data	Data collected on board a demand response vehicle relating to the picking up and discharging of passengers.
demand responsive transit plan	Plan regarding overall demand responsive transit schedules and deployment.
demand responsive transit request	Request for paratransit support.
device control request	Request for device control action
device data	Data from detectors, environmental sensor stations, roadside equipment, and traffic control devices, including device inventory information.
device status	Status information from devices
driver log	A daily log showing hours in service for the current driver. The query flow is not explicitly shown.
driver to fleet request	Requests from the driver and vehicle for routing, payment, and enrollment information.
dynamic sign coordination	The direct flow of information between field equipment. This includes information used to initialize, configure, and control dynamic message signs. This flow can provide message content and delivery attributes, local message store maintenance requests, control mode commands, status queries, and all other commands and associated parameters that support local management of these devices. Current operating status of dynamic message signs is returned.
electric charging station data	Information provided for electric charging stations to the management center identifying the location, operating status, current availability, no-shows, charging capacity, etc.
electric charging station management information	Parameters that support management of an electric charging station. Load balancing, Reservation requests, Hours of operation, display configuration (ads), rules and regulations, etc.

Flow Name	Description
emergency archive data	Logged emergency information including information that characterizes identified incidents (routine highway incidents through disasters), corresponding incident response information, evacuation information, surveillance data, threat data, and resource information. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
emergency dispatch requests	Emergency vehicle dispatch instructions including incident location and available information concerning the incident.
emergency dispatch response	Request for additional emergency dispatch information and provision of en route status.
emergency notification	An emergency request for assistance that is automatically initiated by a vehicle or manually initiated by a vehicle occupant or a traveler (vulnerable road user) with a personal information device. The request includes call-back number, date, time, location, pre-event vehicle heading, vehicle make, model, model year, and fuel type, and crash severity indicators. Crash severity indicators include: airbags deployed, number of impacts, crash delta velocity, principle direction of force, and rollover indication. In addition, seatbelt restraint use, number of occupants, occupant location, and intrusion may be included. For commercial vehicles, this flow may also include freight equipment type (box, flatbed, trailer, container, etc.), type of cargo (refrigerated, non-perishable, liquid, etc.), hazardous material data, quantity of cargo, and cargo permits as applicable (hazmat, special routing permissions).
emergency plan coordination	Information that supports coordination of emergency management plans, continuity of operations plans, emergency response and recovery plans, evacuation plans, and other emergency plans between agencies. This includes general plans that are coordinated prior to an incident and shorter duration tactical plans that are prepared during an incident.
emergency route request	Request for access routes for emergency response vehicles and equipment. This may be a request for ingress or egress routes or other emergency routes. It may also include a request for preemption/priority for the identified vehicle at all signalized intersections along the route.
emergency routes	Suggested ingress and egress routes for access to and between the scene and staging areas or other specialized emergency access routes.
emergency traffic control information	Status of a special traffic control strategy or system activation implemented in response to an emergency traffic control request, a request for emergency access routes, a request for evacuation, a request to activate closure systems, a request to employ driver information systems to support public safety objectives, or other special requests. Identifies the selected traffic control strategy and system control status.
emergency traffic control request	Special request to preempt the current traffic control strategy in effect at one or more signalized intersections or highway segments, activate traffic control and closure systems such as gates and barriers, activate safeguard systems, or use driver information systems. For example, this flow can request all signals to red-flash, request a progression of traffic control preemptions along an emergency vehicle route, request a specific evacuation traffic control plan, request activation of a road closure barrier system, or place a public safety or emergency-related message on a dynamic message sign.
emergency traffic coordination	Coordination supporting disaster response including evacuation and reentry. Includes coordination of special traffic control strategies that support efficient evacuation and reentry while protecting and optimizing movement of response vehicles and other resources responding to the emergency.
emergency transit schedule information	Information on transit schedule and service changes that adapt the service to better meet needs of responders and the general public in an emergency situation, including special service schedules supporting evacuation.
emergency transit service request	Request to modify transit service and fare schedules to address emergencies, including requests for transit services to evacuate people from and/or deploy response agency personnel to an emergency scene. The request may poll for resource availability or request pre-staging, staging, or immediate dispatch of transit resources.
emergency transit service response	Response indicating changes to transit service, fares, and/or restrictions that will be made and status of transit resources to be deployed to support emergency response and/or evacuation.
emergency traveler information	Public notification of an emergency such as a natural or man-made disaster, civil emergency, or child abduction. This flow also includes evacuation information including evacuation instructions, evacuation zones, recommended evacuation times, tailored evacuation routes and destinations, traffic and road conditions along the evacuation routes, traveler services and shelter information, and reentry times and instructions.
emergency traveler information request	Request for alerts, evacuation information, and other emergency information provided to the traveling public.

Flow Name	Description
emergency vehicle tracking data	The current location and operating status of the emergency vehicle.
emissions archive data	Air quality and vehicle emissions information that is collected by sensors or derived from models. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
environmental conditions data	Current road conditions (e.g., surface temperature, subsurface temperature, moisture, icing, treatment status) and surface weather conditions (e.g., air temperature, wind speed, precipitation, visibility) as measured and reported by fixed and/or mobile environmental sensors and aggregated by the data collector. Attributes relating to the data collection (and aggregation) are also included.
environmental conditions data status	Status of the data quality of environmental conditions data provided by a data contributor. Includes not only status by sensor, but statistical data regarding the quality checking of data provided.
environmental monitoring application info	Environmental monitoring application parameters and thresholds that control the filtering, aggregation, and range of measures that are collected, derived, and reported. This flow also supports remote control of the application so the application can be taken offline, reset, or restarted.
environmental monitoring application status	Environmental monitoring application status reported by the RSE. This includes current operational state and status of the RSE and a record of system operation.
environmental sensor control	Data used to configure and control environmental sensors.
environmental sensor coordination	The direct flow of information between field equipment. This includes configuration and control of environmental sensors and the current road conditions (e.g., surface temperature, subsurface temperature, moisture, icing, treatment status) and surface weather conditions (e.g., air temperature, wind speed, precipitation, visibility) as measured and reported by fixed and/or mobile environmental sensors. Operational status of the sensors is also included.
environmental sensor data	Current road conditions (e.g., surface temperature, subsurface temperature, moisture, icing, treatment status) and surface weather conditions (e.g., air temperature, wind speed, precipitation, visibility) as measured and reported by fixed and/or mobile environmental sensors. Operational status of the sensors is also included.
environmental situation data	Aggregated and filtered vehicle environmental data collected from vehicle safety and convenience systems including measured air temperature, exterior light status, wiper status, sun sensor status, rain sensor status, traction control status, anti-lock brake status, and other collected vehicle system status and sensor information. This information flow represents the aggregated and filtered environmental data sets that are provided by the RSE to the back office center. Depending on the RSE configuration and implementation, the data set may also include environmental sensor station data collected by the RSE.
equipment maintenance request	Identification of field equipment requiring repair and known information about the associated faults.
equipment maintenance status	Current status of field equipment maintenance actions.
evacuation assistance information	Information on evacuation resources including self-evacuation options, anticipated pickup time and location if a transportation asset is to be deployed, destination shelter, and supporting information on what to bring, estimated reentry date/time.
evacuation assistance request	A request for evacuation assistance, which may be registered in advance or issued during an evacuation. It specifies the location, number of people that need to be evacuated, and any special needs/requirements.
evacuation coordination	Coordination of information regarding a pending or in-process evacuation. Includes evacuation zones, evacuation times, evacuation routes, forecast network conditions, and reentry times.
evacuation information	Evacuation instructions and information including evacuation zones, evacuation times, and reentry times.
expedited clearance information	Includes carrier ID, importer ID, broker ID, conveyance ID, driver ID, service options, and associated information that is used to support expedited border clearance.
expedited clearance registration	Registration of the importer, carrier, conveyance, and driver, as applicable, for border clearance programs such as FAST, Customs Self Assessment (Canada), C-TPAT (US), PIP (Canada), ACI (Canada), and ACE (US). Includes electronic filing of forms and associated payment.

Flow Name	Description
expedited clearance status	Status of expedited clearance registration.
external reports	Traffic and incident information that is collected by the media through a variety of mechanisms (e.g., radio station call-in programs, air surveillance).
fare and price information	Current transit, parking, and toll fee schedule information.
fare collection data	Fare collection information including the summary of fare system data and financial payment transaction data.
fare management information	Transit fare information and transaction data used to manage transit fare processing.
field equipment commands	System-level control commands issued to field equipment such as reset and remote diagnostics.
field equipment configuration settings	Control settings and parameters that are used to configure field equipment.
field equipment software install/upgrade	This flow supports installation and update of software residing in ITS roadway equipment. It supports download of the software installation files, including executable code and associated support files.
field equipment status	Reports from field equipment (sensors, signals, signs, controllers, etc.) which indicate current operational status.
fleet to driver update	Updated instructions to the driver including dispatch, routing, travel and parking information, and special instructions. Special instructions include incident management instruction, operational tasks, impacted transport orders in case of an incident, task descriptions with trip/route/load plan, transport order status information, driver information, vehicle information, cargo information and trip information.
freight equipment information	Container, trailer, or chassis information regarding identity, type, location, brake wear data, mileage, seal #, seal type, door open/close status, chassis bare/covered status, tethered / untethered status, temperature, humidity, power, battery levels, brake wear data, and bill of lading/information regarding the cargo/content.
freight transport booking	Booking information for the transport of freight that includes company, contact information, point of origin, pick-up location, drop-off location, and freight equipment identifier.
freight transportation status	A time-stamped status of a freight shipment as it passes through the supply chain from manufacturer through arrival at its final destination; including cargo movement logs, routing information, and cargo ID's. This includes cargo status, current operation, information on incidents associated with the cargo, and identification of delays/penalties.
freight traveler information preferences	Traveler information preferences from fleet and freight management systems or commercial vehicle drivers including: area covered by fleet/driver, types of freight managed (including special restrictions), preferred routes, other travel preferences pertaining to trip costs or tolls. Also covers revised trip planning requirements for trips already underway.
freight-specific traveler information	Traveler information customized for freight users to indicate truck routes, permit information, truck stops, inspection stations, steep grades, high-profile vehicle advisories, etc. Information provided includes freight-related road and weather conditions, parking information, and route plans.
hazmat information	Information about a particular hazmat load including nature of the load and unloading instructions. May also include hazmat vehicle route and route update information.
hazmat information request	Request for information about a particular hazmat load.
hazmat notification	Information provided to emergency response organizations regarding a hazmat load including when cargo sensors detect an issue with the load such as a release of hazardous material. This information will include sensor information, vehicle identification, and carrier identification.
host transit vehicle status	Information provided to the ITS on-board equipment from other systems on the Transit Vehicle Platform.
host vehicle status	Information provided to the ITS on-board equipment from other systems on the vehicle platform. This includes the current status of the powertrain, steering, and braking systems, and status of other safety and convenience systems. In implementations where GPS is not integrated into the Vehicle On-Board Equipment, the host vehicle is also the source for data describing the vehicle's location in three dimensions (latitude, longitude, elevation) and accurate time that can be used for time synchronization across the ITS environment.

Flow Name	Description
incident command information coordination	Information that supports local management of an incident. It includes resource deployment status, hazardous material information, traffic, road, and weather conditions, evacuation advice, and other information that enables emergency or maintenance personnel in the field to implement an effective, safe incident response.
incident information	Notification of existence of incident and expected severity, location, time and nature of incident. As additional information is gathered and the incident evolves, updated incident information is provided. Incidents include any event that impacts transportation system operation ranging from routine incidents (e.g., disabled vehicle at the side of the road) through large-scale natural or human-caused disasters that involve loss of life, injuries, extensive property damage, and multi-jurisdictional response. This also includes special events, closures, and other planned events that may impact the transportation system.
incident information for media	Report of current desensitized incident information prepared for public dissemination through the media.
incident information for public	Report of current desensitized incident information prepared for public dissemination.
incident notification	The notification of an incident including its nature, severity, and location.
incident notification response	Interactive acknowledgement and verification of the incident information received, requests for additional information, and general information on incident response status.
incident report	Report of an identified incident including incident location, type, severity and other information necessary to initiate an appropriate incident response.
incident response coordination	Incident response procedures and current incident response status that are shared between allied response agencies to support a coordinated response to incidents. This flow provides current situation information, including a summary of incident status and its impact on the transportation system and other infrastructure, and current and planned response activities. This flow also coordinates a positive hand off of responsibility for all or part of an incident response between agencies.
incident response status	Status of the current incident response including a summary of incident status and its impact on the transportation system, traffic management strategies implemented at the site (e.g., closures, diversions, traffic signal control overrides), and current and planned response activities.
incident scene images	Real time images or video of an incident scene. This flow includes the images or video and meta data that describes the images.
incident scene status	Information gathered at the incident site that more completely characterizes the incident and provides current incident response status.
information on violators	Information on violators provided by a law enforcement agency. May include information about commercial vehicle violations or other kinds of violations associated with the particular entity. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
inspection results	Report of results of border inspection on a particular load.
interactive traveler information	Traveler information provided in response to a traveler request. The provided information includes traffic and road conditions, advisories, incidents, restrictions, payment information, transit services, parking information, weather information, and other travel-related data updates and confirmations.
intersection geometry	The physical geometry of an intersection covering the location and width of each approaching lane, egress lane, and valid paths between approaches and egresses. This flow also defines the location of stop lines, cross walks, specific traffic law restrictions for the intersection (e.g., turning movement restrictions), and other elements that support calculation of a safe and legal vehicle path through the intersection.
intersection management application info	Intersection and device configuration data, including intersection geometry, and warning parameters and thresholds. This flow also supports remote control of the application so the application can be taken offline, reset, or restarted.
intersection management application status	Infrastructure application status reported by the RSE. This includes current operational state and status of the RSE and a log of operations.
intersection status	Current signal phase and timing information for all lanes at a signalized intersection. This flow identifies active lanes and lanes that are being stopped and specifies the length of time that the current state will persist for each lane. It also identifies signal priority and preemption status and pedestrian crossing status information where applicable.
lane management control	Information used to configure and control dynamic lane management systems.

Flow Name	Description
lane management coordination	The direct flow of information between field equipment. This includes information used to configure and control dynamic lane management systems and the status of managed lanes including current operational state, violations, and logged information. This also includes lane usage information including both traditional traffic flow measures and special information associated with managed lanes such as measured passenger occupancies. It also includes the operational status of the lane management equipment.
lane management information	System status of managed lanes including current operational state, violations, and logged information. This includes lane usage information including both traditional traffic flow measures and special information associated with managed lanes such as measured passenger occupancies. It also includes the operational status of the lane management equipment.
lighting system control data	Information used to configure and control roadside lighting systems.
lighting system status	Status of roadside lighting controls including operating condition and current operational state.
local priority request coordination	The direct flow of information between field equipment. This includes notification of crossing calls from pedestrians and other vulnerable road users and requests for signal prioritization or preemption, and any other request for right-of-way at an intersection. The status of the priority request is also shared. For vulnerable road users, this includes information provided to guide and warn vulnerable road users at crossings including crossing permission status and crossing time remaining.
local signal preemption request	Direct control signal or message to a signalized intersection that results in preemption of the current control plan and grants right-of-way to the requesting vehicle.
local signal priority request	Request from a vehicle to a signalized intersection for priority at that intersection. This flow also allows the vehicle to cancel a priority request (for example, when the vehicle clears the intersection).
local situation data	This general flow represents the traffic, environmental, and emissions situation data that is collected from connected vehicles by an RSE, aggregated, filtered, and provided to a back-office center. It also includes data collected from ITS roadway equipment that provides current intersection and road network status for the area proximate to the RSE.
location and time	The current geographic location in three dimensions (latitude, longitude, elevation) and the current time.
logged vehicle routes	Anticipated route information for guided vehicles, special vehicles (e.g., oversize vehicles) or groups of vehicles (e.g., governor's motorcade) that may require changes in traffic control strategy.
maint and constr archive data	Information describing road construction and maintenance activities identifying the type of activity, the work performed, and work zone information including work zone configuration and safety (e.g., a record of intrusions and vehicle speeds) information. For construction activities, this information also includes a description of the completed infrastructure, including as-built plans as applicable. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
maint and constr dispatch information	Information used to dispatch maintenance and construction vehicles, equipment, and crews and information used to keep work zone crews informed. This information includes routing information, traffic information, road restrictions, incident information, environmental information, decision support information, maintenance schedule data, dispatch instructions, personnel assignments, alert notifications, and corrective actions.
maint and constr dispatch status	Current maintenance and construction status including work data, operator status, crew status, and equipment status.
maint and constr material information	Information on materials stored on the vehicle including quantity and current application rate.
maint and constr resource coordination	Request for road maintenance and construction resources that can be used in the diversion of traffic (cones, portable signs), clearance of a road hazard, repair of ancillary damage, or any other incident response.
maint and constr resource request	Request for road maintenance and construction resources that can be used in the diversion of traffic (cones, portable signs), clearance of a road hazard, repair of ancillary damage, or any other incident response. The request may poll for resource availability or request pre-staging, staging, or immediate dispatch of resources.

Flow Name	Description
maint and constr resource response	Current status of maintenance and construction resources including availability and deployment status. General resource inventory information covering vehicles, equipment, materials, and people and specific resource deployment status may be included.
maint and constr vehicle conditions	Vehicle diagnostics information that is collected, filtered, and selectively reported by a maintenance and construction vehicle. The information includes engine temperature, mileage, tire wear, brake wear, belt wear, and any warnings or alarms concerning the operational condition of the vehicle and ancillary equipment.
maint and constr vehicle control	Control data sent from on-board ITS systems to control maintenance and construction vehicle equipment, including control of materials dispersion rate and other control functions that will vary with vehicle type and application.
maint and constr vehicle location data	The current location and related status (e.g., direction and speed) of the maintenance/construction vehicle.
maint and constr vehicle measures	Raw vehicle diagnostics and operating status data reported by the maintenance vehicle platform including engine temperature, mileage, tire wear, brake wear, belt wear, and other operational status measures. In addition to this general vehicle status, this flow also includes the status of maintenance and construction-specific systems on the vehicle.
maint and constr vehicle operational data	Data that describes the maintenance and construction activity performed by the vehicle. Operational data includes materials usage (amount stored and current application rate), operational state of the maintenance equipment (e.g., blade up/down, spreader pattern), vehicle safety status, and other measures associated with the operation of a maintenance, construction, or other special purpose vehicle. Operational data may include basic operational status of the vehicle equipment or a more precise record of the work performed (e.g., application of crack sealant with precise locations and application characteristics).
maint and constr vehicle status coordination	Maintenance and construction vehicle status information that is shared between vehicles. This includes environmental conditions and the operational status of the vehicles.
maint and constr vehicle system control	Configure and control data that supports remote control of on-board maintenance and construction vehicle systems and field equipment that is remotely controlled by the vehicle. For example, the data can be used to adjust material application rates and spread patterns.
maint and constr work plans	Future construction and maintenance work schedules and activities including anticipated closures with anticipated impact to the roadway, alternate routes, anticipated delays, closure times, and durations.
maintenance and repair needs	Recommended strategies and schedules for maintenance of the transportation infrastructure.
manifest data	Identifies Port of Entry, date, and information on carrier and goods, origin, etc.
manifest receipt confirmation	Confirmation that a shippers manifest has been received.
map update notification	Notification of maintenance, construction, and other activities that will result in medium to long term changes to road location and configuration that may impact navigable maps. This flow includes the timing of the changes and precise enumeration of the location and configuration changes. It also includes updated static speed limits (perhaps other regulatory rules/signage - no U turns, etc.) and default travel times.
map updates	Map update that could include a new underlying static or real-time map or map layer(s) update. Map layers can include highways, major roads, streets, public transport routes, topography, points of interest, and regulatory information including turn restrictions and speed limits.
meter control	Control of meter to modify reporting data and intervals, and to enable controls over meter use, which could include current limits.
meter data	Report of energy consumption, voltage levels, current, power factor and similar diagnostic and monitoring information.
mixed use safety warning control	Configuration and control of equipment that monitors and manages mixed use crossings and provides visual displays and warnings to drivers when non-motorized users are occupying a cross walk or other mixed use path crossing.
mixed use safety warning status	Current operational status and state of pedestrian crossings and other mixed use path crossing warning systems.
on-board safety data	Safety data measured by on-board sensors. Includes information about the vehicle, vehicle components, cargo, and driver. The query flow is not explicitly shown.

Flow Name	Description
on-board vehicle data	Information about the commercial vehicle stored on-board (for maintenance purposes, gate access, cargo status, lock status, etc.). The request flow is not explicitly shown.
other data source archive data	Data extracted from other data sources. A wide range of ITS and non-ITS data and associated meta data may be provided.
parking area information	Current status for the parking area. This includes information on general parking area status (operating hours, open entrances and exits, entrance queue status, parking operator information, current parking occupancy and availability).
parking area management information	Parameters that support management of a parking area. Hours of operation, parking rules and regulations, parking operator (attendant) information, etc.
parking facility geometry	Precise spatial description of a parking facility that locates each parking space and the ingress and egress routes that are used to travel to and from the spaces.
parking information	General parking information and status, including current parking availability, parking pricing, and parking space availability information, including features like number and type of electric charging spots.
passive vehicle monitoring control	Control commands used to control detection systems that rely on infrastructure-based identification of individual vehicles to measure travel times and other related measures by identifying the same vehicle at different points in the network. Related technologies include Bluetooth readers and license plate recognition systems.
passive vehicle monitoring coordination	The direct flow of information between field equipment. This includes control commands used to control detection systems that rely on infrastructure-based identification of individual vehicles to measure travel times and other related measures by identifying the same vehicle at different points in the network. Related technologies include Bluetooth readers and license plate recognition systems. The coordination also includes sharing of time stamped identifiers that identify the vehicles that have passed through a detection zone.
passive vehicle monitoring data	Time stamped identifiers that identify the vehicles that have passed through a detection zone.
pathway map updates	Pathway map updates that could include a new underlying static or real-time map or map layer(s) update. Map layers can include pedestrian routes, bike lanes, curbs, elevators, escalators, doorways, curb cutouts, indoor facilities, and other relevant features that impact pathway use.
payment device information	Traveler payment information such as card number and previous transactions.
payment device token information	Request for a digital token that can be associated with a credit card number.
payment device update	Information updated concerning traveler's personal data including name, address, user account information, trip records, and profile data.
payment methods	A list of valid payment methods.
payment methods financial institution	A list of valid payment methods accepted by a financial center.
payment request	Request for payment from financial institution or related financial service requests (e.g., balance inquiry)
personal transit information	General and personalized transit information for a particular fixed route, flexible route, or paratransit system.
personnel device status	Monitoring of Personnel Device status including current mode, operational status, and configuration settings. It includes device housekeeping/heartbeat monitoring and includes network information, the status of installed applications, and the configuration of managed devices.
pre-arrival notification	Identification of a vehicle or driver that is approaching a border crossing.
qualified environmental conditions data	Current road conditions (e.g., surface temperature, subsurface temperature, moisture, icing, treatment status) and surface weather conditions (e.g., air temperature, wind speed, precipitation, visibility) that has had quality checks performed on it and has been formatted and consolidated by the Clarus system. Attributes relating to the data collection (and aggregation) are also included.
rail crossing control data	Data required for HRI information transmitted at railroad grade crossings and within railroad operations.

Flow Name	Description
rail crossing operational status	Status of the highway-rail grade crossing equipment including both the current state or mode of operation and the current equipment condition.
rail crossing request	A request for highway-rail intersection status or a specific control request intended to modify HRI operation.
rail crossing status	Status of the highway-rail intersection equipment including both the current state or mode of operation and the current equipment condition.
rail incident response status	Status of the rail system's response to current incidents.
reconciliation response	Response indicating that reconciliation of charges using a smart card have been processed.
reduced speed notification	Reduced speed zone information provided to passing vehicles. This flow provides the reduced speed limit, the location and extent of the reduced speed zone, and associated warning information.
registered secureIDs	Cryptographically protected identifier indicating that the user associated with the identifier is entitled to use a particular service.
registration	Registered owner of vehicle and associated vehicle information.
remote surveillance control	The control commands used to remotely operate another center's sensors or surveillance equipment so that roadside surveillance assets can be shared by more than one agency.
remote vehicle disable	Signal used to remotely disable a transit vehicle.
request for data review	Request that data reported about a motor carrier or driver be reviewed for potential mis-assignment or other error.
request for enforcement	Request for traffic enforcement of speed limits, lane controls, etc. on a roadway including in a work zone or other special situations.
request for payment	Request to deduct cost of service from user's payment account.
request for permit	Request for commercial vehicle permits including oversize, overweight, or hazmat permit. It contains details about the administrative request for conveying hazardous goods. This information flow identifies the freight operator, vehicle dimensions, vehicle weight, hazardous goods characteristics, transport need (origin and destination) and electronic signature.
request tag data	Request for tag information including tag id and associated data.
resource coordination	Coordination of resource inventory information, specific resource status information, resource prioritization and reallocation between jurisdictions, and specific requests for resources and responses that service those requests.
resource deployment status	Status of resource deployment identifying the resources (vehicles, equipment, materials, and personnel) available and their current status. General resource inventory information and specific status of deployed resources may be included.
resource request	A request for resources to implement special traffic control measures, assist in clean up, verify an incident, etc. The request may poll for resource availability or request pre-staging, staging, or immediate deployment of resources. Resources may be explicitly requested or a service may be requested and the specific resource deployment may be determined by the responding agency.
reversible lane control	Control of automated reversible lane configuration and driver information systems.
reversible lane coordination	The direct flow of information between field equipment. This includes control of automated reversible lane configuration and driver information systems and current reversible lane status including the operational status and mode of the reversible lane control equipment.
reversible lane status	Current reversible lane status including traffic sensor and surveillance data and the operational status and mode of the reversible lane control equipment.
right-of-way request notification	Notice that a request has occurred for signal prioritization, signal preemption, pedestrian call, multi-modal crossing activation, or other source for right-of-way.
road closure application info	Road closure signing application configuration data and messaging parameters. This flow identifies the vehicles that may initiate the road closure. This flow also provides access lists, groups, or classifications where selected vehicles are to be allowed access to the closed area.

Flow Name	Description
road closure application status	Road closure application status reported by the RSE. This includes current operational state and status of the RSE, closure status, and a log of closure commands received and issued. For closures that allow entry by selected vehicles, this flow provides an access log identifying vehicles that have requested access with access status.
road closure notification	Notification that agency personnel have closed a road due to adverse weather, major incident, or other reason.
road network conditions	Current and forecasted traffic information, road and weather conditions, and other road network status. Either raw data, processed data, or some combination of both may be provided by this flow. Information on diversions and alternate routes, closures, and special traffic restrictions (lane/shoulder use, weight restrictions, width restrictions, HOV requirements) in effect is included.
road network environmental situation data	Aggregated environmental situation data collected from vehicles and other sources for the road network. Aggregated information would include measured air temperature, exterior light status, wiper status, sun sensor status, rain sensor status, traction control status, ALB status, and other collected vehicle system status and sensor information for the region.
road network status assessment	Assessment of damage sustained by the road network including location and extent of the damage, estimate of remaining capacity, required closures, alternate routes, necessary restrictions, and time frame for repair and recovery.
road network traffic situation data	Aggregated route usage, travel times, and other aggregated data collected from probe vehicles that can be used to estimate current traffic conditions.
road weather advisories	Segment-specific weather and road conditions including real-time advisories of deteriorating road and weather conditions, medium-term advisories for the next 2-12 hours, and long-term advisories more than 12 hours into the future. The advisories may include advisories that are issued based on locally collected environmental data (e.g., an ice on bridge advisory).
road weather information	Road conditions and weather information that are made available by road maintenance operations to other transportation system operators.
roadside archive data	A broad set of data derived from roadside sensors that includes current traffic conditions, environmental conditions, and any other data that can be directly collected by roadside sensors. This data also indicates the status of the sensors and reports of any identified sensor faults.
roadway advisory radio data	Information used to initialize, configure, and control roadside highway advisory radio. This flow can provide message content and delivery attributes, local message store maintenance requests, control mode commands, status queries, and all other commands and associated parameters that support remote management of these systems.
roadway advisory radio status	Current operating status of highway advisory radios.
roadway dynamic signage data	Information used to initialize, configure, and control dynamic message signs. This flow can provide message content and delivery attributes, local message store maintenance requests, control mode commands, status queries, and all other commands and associated parameters that support remote management of these devices.
roadway dynamic signage status	Current operating status of dynamic message signs.
roadway geometry	The physical geometry of a road segment that specifies the location and width of each lane, including normal lanes as well as special lanes for pedestrians and bicycles, transit vehicles, and trains. This flow also may include the curvature, grade, and superelevation or banking of the road segment.
roadway maintenance status	Summary of maintenance fleet operations affecting the road network. This includes the status of winter maintenance (snow plow schedule and current status).
roadway treatment coordination	The direct flow of information between field equipment. This includes control data for remotely located, automated devices, that treat the road surface (e.g., de-icing applications) and the current operational status of automated roadway treatment devices.
roadway treatment system control	Control data for remotely located, automated devices, that treat the road surface (e.g., de-icing applications).
roadway treatment system status	Current operational status of automated roadway treatment devices (e.g., anti-icing systems).

Flow Name	Description
roadway warning coordination	The direct flow of information between field equipment. This includes information used to configure and control roadway warning systems and the current operating status of roadway warning systems.
roadway warning system control	Information used to configure and control roadway warning systems.
roadway warning system status	Current operating status of roadway warning systems.
route restrictions	Information about routes, road segments, and areas that do not allow the transport of security sensitive hazmat cargoes or include other restrictions (such as height or weight limits).
RSE fault data	RSE fault information that can be used to identify RSEs that require initialization, reconfiguration, repair or replacement. This flow identifies the device, the nature of the fault, and associated error codes and diagnostic data.
RSE status	Monitoring of RSE device status including current mode, operational status, and configuration settings. It includes device housekeeping/heartbeat monitoring and includes network information, the status of installed applications, the configuration of managed devices, cybersecurity and physical security status of the RSE.
safeguard system control	Data that controls safeguard systems (remotely controlled equipment used to mitigate the impact of incidents on transportation infrastructure, such as blast shields, exhaust systems, etc.).
safeguard system status	Current operating status of safeguard systems (remotely controlled equipment used to mitigate the impact of incidents on transportation infrastructure, such as blast shields, exhaust systems, etc.). Status of the systems includes operating condition and current operational state.
safety inspection record	Record containing results of commercial vehicle safety inspection.
safety inspection report	Report containing results of commercial vehicle safety inspection. The information may be provided as a response to a real-time query or proactively by the source. The query flow is not explicitly shown.
safety status information	Safety information such as safety ratings, security ratings or flags, inspection summaries, and violation summaries. A unique identifier is included. Corresponds to the safety and security portion of CVISN "snapshots." The status information may be provided as a response to a real-time query or as a result of a standing request for updated information (subscription). This may also include information about non-U.S. fleets for use by U.S. authorities, and information regarding U.S. fleets made available to Mexican and Canadian authorities. The query flow is not explicitly shown.
screening results	Results of commercial vehicle screening event at a border crossing - reports clearance event data regarding action taken at border, including acceptance or override of system decision, and date/time stamp.
service patrol dispatch request	Service patrol dispatch instructions including incident location and available information concerning the incident.
service patrol dispatch response	Request for additional dispatch information and provision of en route status.
service patrol incident status	Information gathered at the incident site by a service patrol vehicle that more completely characterizes the incident, the services provided, and clearance status.
service registry	Catalogue of products and values, access rights and related information.
settlement	Information exchanged to settle charges and distribute or debit accounts appropriate to the authorized charges.
shelter recommendations	Recommendation identifying the shelter or shelters best suited to the requestor. Hotels/motels may also be included as potential sheltering options. This flow may also include shelter assignments/reservations.
shelter request	A request for shelter information, recommendations, or assignment/reservation. Information provided my include name, current location, number of people in the group, additional requirements (e.g., evacuating with pets, needed medical support).
signal control commands	Control of traffic signal controllers or field masters including clock synchronization.

Flow Name	Description
signal control coordination	The direct flow of information between field equipment. This includes configuration and control of traffic signal controllers or field masters. Configuration data and operational status of traffic signal control equipment including operating condition and current indications are returned.
signal control device configuration	Data used to configure traffic signal control equipment including local controllers and system masters.
signal control plans	Traffic signal timing parameters including minimum green time and interval durations for basic operation and cycle length, splits, offset, phase sequence, etc. for coordinated systems.
signal control status	Operational and status data of traffic signal control equipment including operating condition and current indications.
signal fault data	Faults reported by traffic signal control equipment.
signal system configuration	Data used to configure traffic signal systems including configuring control sections and mode of operation (time based or traffic responsive).
smart card reconciliation	Detailed list of charges of the form charge/transport provider, taken from a smart card that need to be applied to the listed providers.
special vehicle restricted use information	Parameters necessary for implementing unrestricted access to controlled access or toll facilities by special vehicles; e.g., maintenance vehicles, emergency vehicles, etc.
speed management application information	Current speed targets, advisories, and limits including time of day, week, or season speed limits as necessary, and application parameters and thresholds. This flow also supports remote control of the application so the application can be taken offline, reset, or restarted.
speed management application status	Speed management application status reported by the RSE. This includes current operational state and status of the RSE and a record of measured vehicle speeds and current speed targets, advisories, and limits.
speed monitoring control	Information used to configure and control automated speed monitoring, speed warning, and speed enforcement systems.
speed monitoring information	System status including current operational state and logged information including measured speeds, warning messages displayed, and violation records.
suggested route	Suggested route for a dispatched emergency or maintenance vehicle that may reflect current network conditions and the additional routing options available to en route emergency or maintenance vehicles that are not available to the general public.
system status	Monitoring of system device status including current mode, operational status, and configuration settings. It includes device housekeeping/heartbeat monitoring and includes network information, the status of installed applications, and the configuration of managed devices.
tag data	Unique tag ID and related vehicle information.
targeted list	List of carriers, drivers, and/or vehicles of interest for enforcement purposes.
tax filing	Commercial vehicle tax filing data. Authorization for payment is included.
threat data for analysis	Data from surveillance or sensor equipment in secure areas provided for further analysis.
threat information	Threats regarding transportation infrastructure, facilities, or systems detected by a variety of methods (sensors, surveillance, threat analysis of advisories from outside agencies, etc.
threat information coordination	Sensor, surveillance, and threat data including raw and processed data that is collected by sensor and surveillance equipment located in secure areas.
threat support data	Information provided to help receiving agency identify possible threats, including biometric image processing support data.
time local form	Time local form includes UTC time synchronized with the external source in a format usable by connected vehicle center functions.
track status	Current status of the wayside equipment and notification of an arriving train.
traffic archive data	Information describing the use and vehicle composition on transportation facilities and the traffic control strategies employed. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.

Flow Name	Description
traffic control information	Represents the flow of traffic control and status information between centers. This is reporting only, not actual control. This specifically includes the current state of any demand management strategies that have been implemented.
traffic detector control	Information used to configure and control traffic detector systems such as inductive loop detectors and machine vision sensors.
traffic detector coordination	The direct flow of information between field equipment. This includes information used to configure and control traffic detector systems such as inductive loop detectors and machine vision sensors Raw and/or processed traffic detector data is returned that allows derivation of traffic flow variables (e.g., speed, volume, and density measures) and associated information (e.g., congestion, potential incidents). This flow includes the traffic data and the operational status of the traffic detectors
traffic detector data	Raw and/or processed traffic detector data which allows derivation of traffic flow variables (e.g., speed, volume, and density measures) and associated information (e.g., congestion, potential incidents). This flow includes the traffic data and the operational status of the traffic detectors
traffic gap information	Measured gap to the next approaching vehicle per lane and direction of travel
traffic image meta data	Meta data that describes traffic images. Traffic images (video) are in another flow.
traffic images	High fidelity, real-time traffic images suitable for surveillance monitoring by the operator or for use in machine vision applications. This flow includes the images. Meta data that describes the images is contained in another flow.
traffic information for media	Report of traffic conditions including traffic incident reports for public dissemination through the media. The reports may also include information on diversions and alternate routes, closures, and special traffic restrictions in effect.
traffic metering control	Control commands and operating parameters for ramp meters, interchange meters, mainline meters, and other systems equipment associated with roadway metering operations.
traffic metering coordination	The direct flow of information between field equipment. This includes control commands and operating parameters for ramp meters, interchange meters, mainline meters, and other systems equipment associated with roadway metering operations. Current operational status of the traffic metering status is also provided.
traffic metering status	Current operational status and operating parameters for ramp meters, interchange meters, mainline meters and other control equipment associated with roadway metering operations.
traffic situation data	Current, aggregate traffic data collected from connected vehicles that can be used to supplement or replace information collected by roadside traffic detectors. It includes raw and/or processed reported vehicle speeds, counts, and other derived measures. Raw and/or filtered vehicle control events may also be included to support incident detection.
transit and fare schedules	Transit service information including routes, schedules, and fare information. This also includes on-demand service information.
transit archive data	Data used to describe and monitor transit demand, fares, operations, and system performance. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
transit emergency data	Initial notification of transit emergency at a transit stop or on transit vehicles and further coordination as additional details become available and the response is coordinated.
transit fare coordination	Fare and pricing information shared between local/regional transit organizations.
transit fare information	Information provided by transit management that supports fare payment transactions.
transit fare request	Request for fare information and transit fare payment.
transit incident information	Information on transit incidents that impact transit services for public dissemination.
transit information user request	Request for special transit routing, real-time schedule information, and availability information.
transit probe data	Aggregate probe data derived from tracking transit vehicles. Data collected could include transit vehicle speeds and travel times for a given link or collection of links.

Flow Name	Description
transit schedule adherence information	Dynamic transit schedule adherence and transit vehicle location information.
transit schedule information	Current and projected transit schedule information used to initialize the transit vehicle with a vehicle assignment, monitor schedule performance, and develop corrective actions on-board.
transit service coordination	Schedule coordination or AVL information shared between local/regional transit organizations. This includes coordination of connections and control parameters between transit properties as well as coordination of transit-related maintenance activities.
transit service information	Transit service information including routes, schedules, and fare information as well as dynamic transit schedule adherence and transit vehicle location information.
transit stop passenger status	The number of passengers waiting at a PT stop with optional route and destination information for waiting passengers to allow current demand at each stop to be monitored and factored into current transit service operations and transit performance monitoring. The stop identity is included.
transit stop request	Notification that a transit stop has been requested by a transit user at a roadside stop. This flow identifies the route, stop, and the time of the request.
transit system status assessment	Assessment of damage sustained by the public transportation system including location and extent of the damage, current operational status including an estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
transit traveler information	Transit information prepared to support transit users and other travelers. It contains transit schedules, real-time arrival information, fare schedules, alerts and advisories, and general transit service information.
transit traveler information coordination	Transit schedules, real-time arrival information, fare schedules, and general transit service information shared between transit organizations to support transit traveler information systems.
transit traveler request	Request by a Transit traveler to summon assistance, request transit information, or request any other transit services.
transit trip plan	An origin-destination transit trip that may involve multiple modes and connections.
transit trip request	Request for a transit trip plan that is responsive to traveler requirements such as schedule, cost, or duration.
transit vehicle conditions	Operating conditions of transit vehicle (e.g., engine running, oil pressure, fuel level and usage). It includes status of other on-board systems including user displays, passenger counters, and security systems. This overall status information is also collected from unused (out of service) vehicles.
transit vehicle information	Information about the transit vehicle route and stops, including current location along the route and next stop.
transit vehicle loading data	Data collected on board the transit vehicle relating to passenger boarding and alighting.
transit vehicle location data	Current transit vehicle location and related operational conditions data provided by a transit vehicle.
transit vehicle operator authentication information	Information regarding on-board transit operator authentication
transit vehicle operator authentication update	Results of authentication process or update of on-board authentication database.
transit vehicle operator information	Transit service instructions, wide area alerts, traffic information, road conditions, and other information for both transit and paratransit operators.
transit vehicle schedule performance	Estimated times of arrival and anticipated schedule deviations reported by a transit vehicle.
transportation operational strategies	Operational strategies for each operating agency in a transportation corridor, downtown area, or other travel-impacted area, providing an integrated operations strategy for the freeways, tollways, arterials, transit services, parking facilities, and other transportation-related facilities in the area. These strategies can include dynamic adjustments to transit fares and tolls, parking fees and restrictions, dynamic lane restriction changes, and other active demand management strategies.

Flow Name	Description
transportation system status	Current status and condition of transportation infrastructure (e.g., tunnels, bridges, interchanges, TMC offices, maintenance facilities). In case of disaster or major incident, this flow provides an assessment of damage sustained by the surface transportation system including location and extent of the damage, estimate of remaining capacity and necessary restrictions, and time frame for repair and recovery.
transportation weather information	Current and forecast road conditions and weather information (e.g., surface condition, flooding, wind advisories, visibility, etc.) associated with the transportation network. This information is of a resolution, timeliness, and accuracy to be useful in transportation decision making.
traveler alerts	Traveler information alerts reporting congestion, incidents, adverse road or weather conditions, restrictions, vehicle requirements, parking availability, transit service delays or interruptions, and other information that may impact the traveler. Relevant alerts are provided based on traveler-supplied profile information including trip characteristics and preferences.
traveler archive data	Data associated with traveler information services including service requests, facility usage, rideshare, routing, and traveler payment transaction data. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
traveler information for media	General traveler information regarding incidents, unusual traffic conditions, transit issues, or other advisory information that has been desensitized and provided to the media.
traveler input	User input from a traveler to summon assistance, request travel information, make a reservation, or request any other traveler service.
traveler interface updates	Visual or audio information (e.g., routes, messages, guidance, emergency information) that is provided to the traveler.
traveler payment information	Information provided for payment of road use charges, tolls or parking fees including identification that can be used to identify the payment account or source and related vehicle and service information that are used to determine the type and price of service requested. The information exchange normally supports an account debit to pay fees, but an account credit may be initiated where pricing strategies include incentives.
traveler payment request	Request for information supporting payments. For fee structures that include incentives, the request may support either an account debit or an account credit or reimbursement.
traveler personal information	This flow includes biometric and other data to allow recognition of travelers.
traveler request	A request for traveler information including traffic, transit, toll, parking, road weather conditions, event, and passenger rail information. The request identifies the type of information, the area of interest, parameters that are used to prioritize or filter the returned information, and sorting preferences.
traveler sourced updates	Traveler posts on traffic and road conditions, parking availability, transit services, traveler services, shelter information, hazards, debris, obstacles, and other real-time crowd-sourced data that may be shared with other travelers.
trigger area	A geographic area a commercial motor vehicle crosses into, which initiates a request to compile and transmit a safety data message. May be associated with a time period.
trigger area definition	Information that defines the desired trigger area for wireless roadside inspection safety data message submission.
trigger area notification	Notification to activate wireless roadside inspection safety data message collection.
trigger control	Controls to enable or disable a particular trigger.
trip access coordination	Access token granting the bearer the right to use a given transportation resource; typically used when one payment provider is paid for a trip using multiple travel providers; the token is used by the Traveler to gain access to one or more of the travel provider resource (e.g., a transit ride).
trip confirmation	Acknowledgement by the driver/traveler of acceptance of a trip plan with associated personal and payment information required to confirm reservations. Conversely, this flow may also reject the proposed trip plan. Confirmations include the selected route and subsequent trip confirmation messages will be issued for route changes.
trip feedback	Information provided during or at the conclusion of a trip that supports performance monitoring and system optimization. Information provided may include a record of the trip including HOV/HOT lane usage and user provided feedback at the conclusion of the trip.
trip identification number	The unique trip load number for a specific cross-border shipment.

Flow Name	Description
trip log	Driver's daily log, vehicle location, mileage, and trip activity (includes screening, inspection and border clearance event data as well as fare payments). The request flow is not explicitly shown.
trip plan	A travel itinerary covering single or multimodal travel. The itinerary identifies a route and associated traveler information and instructions identifying recommended trip modes (including indoor and outdoor wayfinding) and transfer information, ride sharing options, and transit and parking reservation information. This flow also includes intermediate information that is provided as the trip plan is interactively created, including identification of alternatives, requests for additional information as well as amenities along the trip.
trip request	Request for trip planning services that identifies the trip origin, destination(s), timing, preferences, and constraints. The request may also include the requestor's location or a request for transit and parking reservations, electric charging station access, and ridesharing options associated with the trip. The trip request also covers requests to revise a previously planned trip and interim updates that are provided as the trip is interactively planned.
unique identifiers	Unique identifiers for the motor carrier, driver, and vehicle. This flow identifies the driver actually operating the vehicle in multi-driver scenarios.
usage and billing info	Account, usage, charging, limits and similar information relevant to electric utility billing.
user account reports	Reports on services offered/provided and associated charges.
user account setup	Billing information, vehicle information (or registration information), and requests for reports. Also includes subsequent account changes.
user profile	Information provided to register for a travel service and create a user account. The provided information includes personal identification, traveler preferences (e.g., travel mode, micro-mobility options, accessibility needs, and assistance needs), priorities for the preferences, device information, a user ID and password, and information to support payment transactions, if applicable.
variable speed limit control	Information used to configure and control variable speed limit systems including the equipment used to provide current speed limits and other information to drivers.
variable speed limit coordination	The direct flow of information between field equipment. This includes information used to configure, control, and monitor variable speed limit systems including the equipment used to provide current speed limits and other information to drivers.
variable speed limit status	Current operating status of the variable speed limit systems including the state of the equipment.
vehicle charging profile	Vehicle information provided to an electric charging station including the operational status of the electrical system, the charging capacity for the vehicle, and % charge complete.
vehicle control	Control commands issued to vehicle actuators that control steering, throttle, and braking and other related commands that support safe transition between manual and automated vehicle control. This flow can also deploy restraints and other safety systems when a collision is unavoidable.
vehicle entries and exits	Information exchanged between an RSE and ITS Roadway Equipment that supports detection of non-equipped vehicles in an automated lane, low emissions zone, or other facility where V2I communications is used to monitor vehicles at entry or exit points. This exchange also supports identification of non-equipped vehicles where an RSE is used for payment collection. This generic exchange can be implemented by any approach that compares vehicle detections with V2I communications by the RSE to identify vehicles that are not equipped or are otherwise unable to communicate with the RSE.
vehicle location and motion	Data describing the vehicle's location in three dimensions, heading, speed, acceleration, braking status, and size.
vehicle location and motion for surveillance	Data describing the vehicle's location in three dimensions, heading, speed, acceleration, braking status, and size. This flow represents monitoring of basic safety data ('vehicle location and motion') broadcast by passing connected vehicles for use in vehicle detection and traffic monitoring applications.
vehicle location data for mapping	Aggregate vehicle location data collected to support map data creation and refinement.
vehicle profile	Information about a vehicle such as vehicle make and model, fuel type, engine type, size and weight, vehicle performance and level of control automation, average emissions, average fuel consumption, passenger occupancy, or other data that can be used to classify vehicle eligibility for access to specific lanes, road segments, or regions or participation in cooperative vehicle control applications.
vehicle signage application info	In-vehicle signing application configuration data and messaging parameters. This flow provides a list of regulatory, warning, and information messages to be displayed and parameters that support scheduling and prioritizing messages to be issued to passing vehicles. This flow also supports remote control of the application so the application can be taken offline, reset, or restarted.

Flow Name	Description
vehicle signage application status	In-vehicle signing application status reported by the RSE. This includes current operational state and status of the RSE and a log of messages sent to passing vehicles.
vehicle signage data	In-vehicle signing data that augments regulatory, warning, and informational road signs and signals. The information provided would include static sign information (e.g., stop, curve warning, guide signs, service signs, and directional signs) and dynamic information (e.g., local traffic and road conditions, restrictions, vehicle requirements, work zones, detours, closures, advisories, and warnings).
vehicle signage local data	Information provided by adjacent field equipment to support in-vehicle signing of dynamic information that is currently being displayed to passing drivers. This includes the dynamic information (e.g., local traffic and road conditions, work zone information, lane restrictions, detours, closures, advisories, parking availability, etc.) and control parameters that identify the desired timing, duration, and priority of the signage data.
video surveillance control	Information used to configure and control video surveillance systems.
video surveillance coordination	The direct flow of information between field equipment. This includes information used to configure and control video surveillance systems and the high fidelity, real-time traffic images and associated meta data that are returned.
voice-based alert notification	Information to be distributed to the traveling public via voice regarding a major emergency such as a natural or man-made disaster, civil emergency, severe weather or child abduction. The flow may identify the alert originator, the nature of the emergency, the geographic area affected by the emergency, the effective time period, and information and instructions necessary for the public to respond to the alert. The content of this information flow may be specially formatted for voice-based traveler information.
voice-based traveler information	Traveler information sent to the telecommunications systems for traveler information terminator. This flow may represent the bulk transfer of traveler information, including traffic conditions, incident information, transit information and weather and road condition information. It may be specially formatted for voice-based traveler information.
voice-based traveler request	The electronic traveler information request from the telecommunications systems for traveler information terminator. It may be specifically formatted for voice-based traveler requests. The request can be a general subscription intended to initiate a continuous or regular data stream or a specific request intended to initiate a one-time response from the recipient.
weather archive data	Accumulated forecasted and current weather data (e.g., temperature, pressure, wind speed, wind direction, humidity, precipitation, visibility, light conditions, etc.) as well as qualified environmental sensor data. Content may include a catalog of available information, the actual information to be archived, and associated meta data that describes the archived information.
weather information	Accumulated forecasted and current weather data (e.g., temperature, pressure, wind speed, wind direction, humidity, precipitation, visibility, light conditions, etc.).
weigh-in-motion information	Information from commercial vehicle virtual weigh-in-motion systems including vehicle weight, vehicle dimensions, vehicle identification and driver identification.
work plan coordination	Coordination of work plan schedules and activities between maintenance and construction organizations or systems. This information includes the work plan schedules and comments and suggested changes that are exchanged as work plans are coordinated and finalized.
work plan feedback	Comments and suggested changes to proposed construction and maintenance work schedules and activities. This information influences work plan schedules so that they minimize impact to other system operations and the overall transportation system.
work zone information	Summary of maintenance and construction work zone activities affecting the road network including the nature of the maintenance or construction activity, location, impact to the roadway, expected time(s) and duration of impact, anticipated delays, alternate routes, and suggested speed limits. This information may be augmented with images that provide a visual indication of current work zone status and traffic impacts.
work zone safety application info	Work zone safety application configuration data and warning parameters and thresholds. This includes work zone configuration including geofenced crew areas and travel lanes that provide a safety boundary between work zone personnel and passing vehicles. This flow also supports remote control of the application so the application can be taken offline, reset, or restarted.
work zone safety application status	Work zone safety application status reported by the RSE. This includes current operational state and status of the RSE and a record of identified work zone safety alerts and warnings issued.

Flow Name	Description
work zone status	Current work zone status including current location (and future locations for moving work zones), impact to the roadway, required lane shifts, expected time(s) and duration of impact, anticipated delays, alternate routes, and suggested speed limits.
work zone warning device control	Data used to configure and control work zone safety monitoring and warning devices.
work zone warning notification	Notification of a work zone emergency or safety issue. This flow identifies that a work zone emergency or safety issue has occurred so that warnings may be generated by more than one system in the work zone.
work zone warning status	Status of a work zone safety monitoring and warning devices. This flow documents system activations and includes additional supporting information (e.g., an image) that allows verification of the alarm.
wrong way vehicle detected	Notification that a vehicle has been detected traveling in the wrong direction. This can be a direct report by an equipped vehicle that is being driven in the wrong direction or a report of a non-equipped vehicle that has been detected traveling in the wrong direction. It includes the current location, speed, acceleration, and heading of the wrong way vehicle.
wrong way vehicle notification	Notification to public safety that a vehicle has been detected traveling in the wrong direction. It includes information about the vehicle (make, model, color, other identification data) and the current location, speed, acceleration, and heading of the wrong way vehicle.

Appendix I – ITS Project List for the Arizona Statewide ITS Architecture Update (Project Sequence)

Project List (Project Sequence)

Project Sponsor	Project Name	Status	Timeframe	Description
Arizona Department of Transportation (ADOT)	ADOT Active Traffic Management on US60: I-10 to Higley	Planned	MEDIUM	This project equips US60 from I-10 to Higley with active traffic management methods and field elements to increase peak capacity, smooth traffic flows and enhance safety. Methods may include variable speed limits, adaptive ramp metering, queue protection, lane management, wrong way detection and traveler information.
Arizona Department of Transportation (ADOT)	ADOT Alternate Route Notification - Statewide	Planned	LONG	This project will develop a decision support system (DSS) for statewide integrated and proactive management to inform drivers of alternative route selections through instrumented and communicative infrastructure. This process also includes data warehousing such as data acquisition, storage, and archiving.
Arizona Department of Transportation (ADOT)	ADOT Alternative Truck Routing on I-10	Planned	LONG	Arizona Department of Transportation in collaboration with the I-10 Corridor Coalition will develop an integrated corridor management (ICM) decision support system (DSS) for truck routing and operations using real-time traffic data on I-10.
Arizona Department of Transportation (ADOT)	ADOT CCTV Installation Around Mini-Stack	Planned	SHORT	Install 5 cameras around the 'mini-stack' where I-10, SR 51, and SR 202 intersect
Arizona Department of Transportation (ADOT)	ADOT CCTV Installation on I-10 MP 246 to MP 309	Planned	SHORT	6 CCTVs installation on I-10 between MP 246 to MP 309
Arizona Department of Transportation (ADOT)	ADOT CCTV Upgrade Around State	Planned	SHORT	Upgrade 18 old CCTVs on I-10, I-17, I-40, SR 64, SR 69, SR 77, SR 95, and US 60
Arizona Department of Transportation (ADOT)	ADOT Curve Warning ITS on SR 87	Planned	LONG	-Install speed feedback signs and speed advisory warning signs with flashing beacons at curves (SB MP 247, MP 245)-Install speed feedback signs NB MP 244.6-Implement variable speed limits MP 241-246 with new DMS and CCTV SB at MP 247 and new DMS and CCTV NB at MP 240
Arizona Department of Transportation (ADOT)	ADOT CVO Enforcement Applications	Planned	MEDIUM	Arizona Department of Transportation in collaboration with the I-10 Corridor Coalition will develop smart roadside initiatives that may include electronic screening for vehicle and driver credentials, virtual weigh stations and additional inspection stations.
Arizona Department of Transportation (ADOT)	ADOT CVO Truck Platooning on I-10	Planned	LONG	Arizona Department of Transportation in collaboration with the I-10 Corridor Coalition will integrate truck platooning technologies into the I-10 Corridor features. Truck platooning uses vehicle to vehicle (V2V) communications allowing multiple trucks to closely follow one another.
Arizona Department of Transportation (ADOT)	ADOT DMS Installation in Eager	Planned	MEDIUM	Install 3 DMSs around Eager Area: US 60 (MP 387), US 180 (MP 403), SR 260 (MP 395)

Project List (Project Sequence)

Project Sponsor	Project Name	Status	Timeframe	Description
Arizona Department of Transportation (ADOT)	ADOT DMS: High Priority	Planned	SHORT	Install DMS in the following locations: Relocation of SR 93 MP 28 DMS Sign; Two signs on I-8 W/B & E/B around Dateland; Two signs on I-19 S/B & N/B around Sahuarita; I-19 N/B around MX Border; US 191 N/B before US 70; I-17 N/B before SR 169; Two signs on SR 77 N/B before SR 79 and another before SR 177; SR 89 W/B on MP 360; I-10 W/B before Quartzite; I-10 W/B MP 188 and E/B MP 196; SR 387 N/B MP 7, N/B at Kortsen Rd, and S/B on McCartney Rd; SR 87 E/B at SR 287 junction and S/B MP 116
Arizona Department of Transportation (ADOT)	ADOT DMS: Low Priority	Planned	LONG	Install DMS in the following locations: I-10 W/B before I-8; Two signs on I-17 N/B before SR 69 and before SR 260; Two signs I-17 S/B before SR 169 and before SR 179; SR 86 E/B before I-19 junction; I-40 E/B around MP 191; US 191 around MP 158; Two signs on US 60 at MP 130 in both directions.
Arizona Department of Transportation (ADOT)	ADOT DMS: Medium Priority	Planned	MEDIUM	Install DMS in the following locations: Two signs on I-10 W/B before US 191 and before Riggs Rd; I-10 E/B before SR 587; I-40 W/B before SR 95; US 93 S/B around MP 27; Two signs on SR 86 E/B & W/B around Sells; SR 87 N/B around MP 225; SR 347 N/B before I-10.
Arizona Department of Transportation (ADOT)	ADOT Fiber Installation on Grand Ave/US 60	Planned	MEDIUM	Install fiber on Grand Ave/US 60 (MP 110 to 160)
Arizona Department of Transportation (ADOT)	ADOT Fiber Installation on I-10 from CA Border to Phoenix	Planned	LONG	Install fiber on I-10 between CA Border and Phoenix (MP 0 to MP 112)
Arizona Department of Transportation (ADOT)	ADOT Fiber Installation on I-10 through GRIC	Planned	SHORT	Install fiber on I-10 through the Gila River Indian Community (MP 164 to MP 187)
Arizona Department of Transportation (ADOT)	ADOT Fiber Installation on I-40 between Flagstaff and NM Border	Planned	SHORT	Install fiber on I-40 between Flagstaff and NM border (MP 195 to MP 360)
Arizona Department of Transportation (ADOT)	ADOT Fiber Installation on I-8 between CA Border and Gila Bend	Planned	LONG	Install fiber on I-8 between Yuma and Gila Bend (MP 0 to MP 114)
Arizona Department of Transportation (ADOT)	ADOT Fiber Installation on SR 69 between I-17 and Prescott	Planned	MEDIUM	Install fiber on SR 69 between I-17 and Prescott (MP 263 to MP 296)

Project List (Project Sequence)

Project Sponsor	Project Name	Status	Timeframe	Description
Arizona Department of Transportation (ADOT)	ADOT Fiber Installation on SR 85 between Gila Bend and I-10	Planned	MEDIUM	Install fiber on SR 85 between Gila Bend and I-10 (MP 120 to MP 154)
Arizona Department of Transportation (ADOT)	ADOT Fiber Installation on SR 87 from L202 to Payson	Planned	MEDIUM	Install fiber on SR 87 (MP 177 to MP 236)
Arizona Department of Transportation (ADOT)	ADOT FMS on I-10: I-19 to Kolb Road	Planned	MEDIUM	ADOT is expanding their freeway management system (FMS) to include node buildings, fiber, CCTV, DMS, ramp meters, and mainline detection.
Arizona Department of Transportation (ADOT)	ADOT I-17 Flex Lanes	Planned	SHORT	Two lanes will be added to S/B I-17 for about 8 miles between Black Canyon City and Sunset Point. Steel gates and DMS signs will be remotely operated by the TOC.
Arizona Department of Transportation (ADOT)	ADOT I-17 Queue Protection – SB	Planned	LONG	Speed feedback with back of queue DSS add Variable Speed and DMS signs as well on I-17 from MP 299 to MP 306
Arizona Department of Transportation (ADOT)	ADOT I-17 SMART Highway Project	Planned	SHORT	Add 2 DMS (N/B at MP 286 and S/B MP 324), 6 CCTV (MP 263, MP 286, MP 287, MP 293, MP 323, MP 324), 5 WWD (SR 69, SR 260, Cornville, Pinewood, and Acrosanti TIs), and 1 RWIS (MP 296) on I-17.
Arizona Department of Transportation (ADOT)	ADOT I-19 SMART Highway Project	Planned	MEDIUM	Add last mile fiber connection along SR 189 and B-19 and add CCTVs and DMS along I-19 corridor.
Arizona Department of Transportation (ADOT)	ADOT I-40 and SR 89 - DMS	Planned	SHORT	Install DMS at the following locations: I-40 W/B MP 75 and SR 89 N/B MP 360
Arizona Department of Transportation (ADOT)	ADOT I-40 SMART Highway Project	Planned	SHORT	Add Fiber, 1 W/B DMS, and 1 CCTV from I-17 to Country Club Dr.
Arizona Department of Transportation (ADOT)	ADOT I-40 Variable Speed Limits for Winter Operations	Planned	SHORT	Variable Speed Limit with DSS for Winter Operations on I-40 from MP 146 to MP 252
Arizona Department of Transportation (ADOT)	ADOT I-40: I-17 - Country Club Dr - Fiber, DMS, and CCTV	Planned	SHORT	Install Conduit, 288 Stand Fiber, DMS, and CCTV Devices on I-40 from I-17 to Country Club Dr MP 195 to 201

Project List (Project Sequence)

Project Sponsor	Project Name	Status	Timeframe	Description
Arizona Department of Transportation (ADOT)	ADOT I-8 and SR 85 - DMS and a Queue Warning System	Planned	SHORT	Install DMS and a queue warning system on I-8 and SR 85 junction; Install a DMS on the intersection of I-10 and I-8
Arizona Department of Transportation (ADOT)	ADOT Integrated Corridor Management on US60: I-10 to SR202L	Planned	LONG	This project will implement integrated corridor management (ICM) techniques on US60 from I-10 to SR202L to improve travel time reliability and predictability, help manage congestion, optimize throughput, and provide travelers with improved information and routing options. In addition, this project will develop ICM deployment alternatives and identify ICM strategies for US60 and the available parallel alternative routes.
Arizona Department of Transportation (ADOT)	ADOT ITS Installation Along I-40 MP 12 to MP 310 - CCTV, DMS, and RWIS	Planned	MEDIUM	5 CCTVs, 1 DMS, and 3 RWISs installation on I-40 between MP 12 to MP 310
Arizona Department of Transportation (ADOT)	ADOT ITS Installation in Payson - DMS and CCTV	Planned	MEDIUM	Installation of 3 DMSs and 1 CCTV in the Payson area: SR 87 (MP 250 to MP 255) and SR 260 (MP 255)
Arizona Department of Transportation (ADOT)	ADOT ITS Installation on Grand Ave - DMS and CCTV	Planned	MEDIUM	Installation of 4 DMS and 8 CCTV along Grand Ave (US 60 MP 140 to MP 160)
Arizona Department of Transportation (ADOT)	ADOT ITS Installation on I-10 MP 196 to MP 205 - CCTV and DMS	Planned	MEDIUM	1 CCTV and 2 DMSs installation between I-10 MP 196 to MP 205
Arizona Department of Transportation (ADOT)	ADOT MAG Region Blindspot CCTV: High Priority	Planned	SHORT	Install CCTV at the following locations: Three cameras on I-10 on MP 155, MP 145.9, and MP 154; Two cameras on SR 202L on MP 5 and MP 0
Arizona Department of Transportation (ADOT)	ADOT MAG Region Blindspot CCTV: Low Priority	Planned	LONG	Install CCTV at the following locations: Three cameras on SR 101L on MP 7.5, MP 39, and MP 55; SR 202L MP 47; I-10 MP 157
Arizona Department of Transportation (ADOT)	ADOT MAG Region Blindspot CCTV: Medium Priority	Planned	MEDIUM	Install CCTV at the following locations: Two cameras on SR 101L on MP 12 and MP 55; SR 202L on MP 4 and MP 6; SR 51 MP 0.5

Project List (Project Sequence)

Project Sponsor	Project Name	Status	Timeframe	Description
Arizona Department of Transportation (ADOT)	ADOT MAG Region CCTV Expansion: High Priority	Planned	SHORT	Install CCTV at the following locations: Two cameras on I-10 MP 144 and MP 150; Two cameras on SR 101L MP 30.5 and MP 28.5; SR 202L MP6
Arizona Department of Transportation (ADOT)	ADOT MAG Region CCTV Expansion: Low Priority	Planned	LONG	Install CCTV at the following locations: US 60 MP 193.4; SR 85 MP 153; SR 202L MP 54.2; SR 303L MP 3; SR 347 MP 188
Arizona Department of Transportation (ADOT)	ADOT MAG Region CCTV Expansion: Medium Priority	Planned	MEDIUM	Install CCTV at the following locations: Two cameras on I-10 MP 122 and MP 164.5; SR 101L MP 29.5; SR 202L MP 10.5; US 60 MP 155
Arizona Department of Transportation (ADOT)	ADOT Metro Phoenix Loop Detector Rehab	Planned	SHORT	Fix Loop Detector locations in Metro Phoenix
Arizona Department of Transportation (ADOT)	ADOT Ramp Meters Installation on I-10 in Tucson	Planned	MEDIUM	Install Ramp Meters in Tucson along I-10 between Twin Peaks Rd and Rita Rd
Arizona Department of Transportation (ADOT)	ADOT Ramp Meters Installation on I-10 Papago	Planned	SHORT	Install Ramp Meters along I-10 between SR 303 and SR 101
Arizona Department of Transportation (ADOT)	ADOT Ramp Meters Installation on I-19 in Tucson	Planned	LONG	Install Ramp Meters along I-19 between Ajo Way and San Xavier Rd
Arizona Department of Transportation (ADOT)	ADOT Regional Integrated Transportation Information System (RITIS)	Planned	MEDIUM	The acquisition of RITIS which is a data analysis tool to help manage traffic operations. RITIS integrates third party probe data, ADOT's incident data, and other data sources to allow real time analysis of traffic incidents.
Arizona Department of Transportation (ADOT)	ADOT Roadway Lighting System	Planned	SHORT	This Arizona Department of Transportation project will extend the LED roadway lighting operability pilot installation to enhance cost savings associated with LED roadway lighting conversions. Data is collected and stored including on-off status, power demand, and energy use for each fixture. This system allows the operator to turn fixtures on/off remotely and invoke dimming of individual fixtures.

Project List (Project Sequence)

Project Sponsor	Project Name	Status	Timeframe	Description
Arizona Department of Transportation (ADOT)	ADOT Rural CCTV Expansion - CCTV on DMS	Planned	SHORT	Add 5 CCTV on DMSs with no confidence CCTV on I-10 (2), US 93, SR 69, and US 60
Arizona Department of Transportation (ADOT)	ADOT RWIS: High Priority	Planned	SHORT	Install RWIS in the following locations: Tuba City - SR 264 MP 348; Over the Summit - US 89 MP 113; Tusayan - SR 64 MP 234
Arizona Department of Transportation (ADOT)	ADOT RWIS: Low Priority	Planned	LONG	Install RWIS in the following locations: Willow Number 4- I-40 MP 83; Willow Beach US 93 MP 25; Holy Moses I-40 MP 48
Arizona Department of Transportation (ADOT)	ADOT RWIS: Medium Priority	Planned	MEDIUM	Install RWIS in the following locations: Cordes Junction - I-17 MP 271; Cerro Montosa - US 60 MP 368; Copper Canyon - I-17 MP 291
Arizona Department of Transportation (ADOT)	ADOT SR 51: I-10 - SR 101L - Wrong Way Detection	Planned	SHORT	Wrong Way Detection MAG TIP: DOT25-26C (Procurement), DOT 25-26D (Design)
Arizona Department of Transportation (ADOT)	ADOT SR 69 ITS Improvements and Raised Median	Planned	LONG	Intelligent Transportation System Improvements and Raised Median on SR 69 from MP 287 to MP 290
Arizona Department of Transportation (ADOT)	ADOT Systems Maintenance and Signal Operations - Replace Current ATMS	Planned	SHORT	DOT25-260C - Replace Current ATMS
Arizona Department of Transportation (ADOT)	ADOT Truck Parking Availability System (TPAS) on I-10	Planned	SHORT	In order to improve efficiency, economic competitiveness, wayfinding and safety, Arizona Department of Transportation in collaboration with the I-10 Corridor Coalition will develop and deploy a system to provide truck drivers with reliable real-time information to make smarter more efficient parking decisions. The system will identify available parking options and the capacity of truck parking lots using advanced parking technologies and communicate parking availability to commercial vehicle operators in real-time.
Arizona Department of Transportation (ADOT)	ADOT Tucson Area Variable Speed Limits	Planned	LONG	Install Variable Speed Limits in Both Directions on I-19 from MP 57 to MP 64
Arizona Department of Transportation (ADOT)	ADOT VSL on Urban Freeways	Planned	MEDIUM	This project installs variable speed limits (VSL) and the associated systems on Urban Freeways within the Phoenix Metropolitan Area.

Project List (Project Sequence)

Project Sponsor	Project Name	Status	Timeframe	Description
Arizona Department of Transportation (ADOT)	ADOT Wrong Way Driver cameras - L101, L202, and L303	Planned	MEDIUM	Integrate thermal WWD cameras into DSS
Arizona Department of Transportation (ADOT)	ADOT Wrong Way Driver Detection Expansion: High Priority	Planned	SHORT	Install thermal WWD cameras in the following locations: I-10 Maricopa MP 150 to MP 166 and I-15 MP 0 to MP 30
Arizona Department of Transportation (ADOT)	ADOT Wrong Way Driver Detection Expansion: Low Priority	Planned	LONG	Install thermal WWD cameras in the following locations: I-10 Tucson MP 236 to MP 261 and I-17 MP 223 to MP 262
Arizona Department of Transportation (ADOT)	ADOT Wrong Way Driver Detection Expansion: Medium Priority	Planned	MEDIUM	Install thermal WWD cameras in the following locations: I-40 Flagstaff MP 185 to MP 211 and I-10 MP 0 to MP 112
Arizona Department of Transportation (ADOT)	ADOT/MCDOT Accelerated Innovation Deployment (AID) Smart Work Zone Technology Demonstration	Planned	SHORT	ADOT and MCDOT will procure and implement Smart Work Zone (SWZ) technologies in conjunction with programmed construction and maintenance projects on freeways and arterials. The technologies will be evaluated and reported to FHWA.
Arizona Department of Transportation (ADOT)	ADOT/MCDOT Adaptive Traffic Signal Control on SR101L	Planned	SHORT	Arizona Department of Transportation and Maricopa County Department of Transportation in collaboration with others will provide enhanced signal timing technologies to improve cross jurisdictional signal operations during integrated corridor management (ICM) or other events that generate atypical volumes or flows. This project will use new adaptive signal control technology (ASCT) to adjust the signal timing on pre-determined arterial corridors in response to real time traffic patterns and congestion near Loop 101 in the Phoenix Metropolitan Area.

Project List (Project Sequence)

Project Sponsor	Project Name	Status	Timeframe	Description
Arizona Department of Transportation (ADOT)	ADOT/MCDOT Arizona Connected Vehicle Program Expansion	Planned	SHORT	Arizona Department of Transportation and Maricopa County Department of Transportation in collaboration with University of Arizona and others partnered together to develop the Arizona Connected Vehicle Program. This test bed includes all signalized intersections within the Anthem Community including the I-17/Daisy Mountain Drive Interchange. Multi Modal Intelligent Traffic Signal System (MMITSS) was selected as the signal priority/optimization system that operates in a connected vehicle environment to service all modes of transportation, including passenger vehicles, transit, emergency vehicles, freight fleets, bicycles and pedestrians. This project will expand connected vehicle applications along the existing test bed. New applications may include but are not limited to audible pedestrian times for walk/don't walk that are dependent upon pedestrian's location, freight priority, transit priority, work zone enhancements, incident alerting, data archive improvements, and overall testbed expansion including additional intersections and ADOT I-17 interchanges in the region.
Arizona Department of Transportation (ADOT)	ADOT/MCDOT Decision Support System on SR101L	Planned	SHORT	Arizona Department of Transportation and Maricopa County Department of Transportation in collaboration with others are partnered together to develop a decision support system (DSS) that will collect and use real time data from agencies and private sector partners to model, assess and recommend the best set of integrated corridor management (ICM) responses. It will also support performance measurement and evaluation of impacts of the DSS.
Arizona Department of Transportation (ADOT)	ADOT/MCDOT Integrated Traveler Mobility on SR101L	Planned	SHORT	Arizona Department of Transportation and Maricopa County Department of Transportation in collaboration with others are partnered together to implement an integrated traveler mobility project that will improve data exchange between the transportation network and the travelers that are interacting with it. The app will facilitate improved data and information exchanges between the app users and the overall ICM application and DSS in real-time and will include optimum route and travel time information based on the DSS recommendations.
City of Casa Grande	Casa Grande EOC	Planned	MEDIUM	Upgrade Emergency Operations Center (EOC) to improve communications during wide area alerts, emergencies, disasters and other EOC activations.
City of Casa Grande	Casa Grande ITS Field Equipment	Planned	MEDIUM	Add ITS Field Equipment such as CCTV and DMS.
City of Casa Grande	Casa Grande TMC	Planned	LONG	Construct a new Casa Grande TMC and install equipment/software. Connect to ADOT, police, fire, and transit.
City of Casa Grande	Casa Grande Traveler Information	Planned	LONG	Develop a traveler information system for travel time, road closures, and weather alerts.

Project List (Project Sequence)

Project Sponsor	Project Name	Status	Timeframe	Description
City of Casa Grande	Casa Grande Weather System	Planned	LONG	This project will install weather systems to notify travelers of poor weather conditions such as flooding, low visibility, and high winds.
Arizona Department of Public Safety	DPS Backhaul Communications	Planned	MEDIUM	Upgrade backhaul communications to improve radio coverage.
Arizona Department of Public Safety	DPS Console Interface	Planned	LONG	Upgrade console interface to be compatible with microwave backhaul communications.
Arizona Department of Public Safety	DPS OBU	Planned	MEDIUM	Upgrade subscriber OBU's as radio system is enhanced.
Arizona Department of Public Safety	DPS Radio System	Planned	MEDIUM	Upgrade radio system that sends information from subscribers to backhaul.
Electric Vehicle Charging Station Operators	Electric Vehicle Charging Stations	Planned	SHORT	This is a generic project that represents deployment of electric vehicle charging stations in the state of Arizona. The Electric Charging Station provides access to electric vehicle charging equipment that is used to charge hybrid and all–electric vehicles. This includes public charging stations that support consumers, workplace charging stations, and fleet charging stations using plug in (level 1, 2, fast charge, etc.) or inductive charging methods. This project specifically addresses electric vehicle charging stations funded under the National Electric Vehicle Infrastructure (NEVI) Formula Program, but also applies to other publicly funded electric vehicle charging stations.
City of Flagstaff	Flagstaff Integration Project	Planned	MEDIUM	Integrate ITS field equipment with the traffic management center (TMC).
City of Flagstaff	Flagstaff ITS Field Equipment	Planned	MEDIUM	Add ITS Field Equipment such as CCTV and DMS.
City of Flagstaff	Flagstaff Traffic Archive	Planned	LONG	Develop a Citywide traffic archive database.
City of Flagstaff	Flagstaff Traffic Management Center	Planned	LONG	Construct a traffic management center (TMC) to manage ITS field equipment (e.g., traffic signal operations, CCTV and DMS).
City of Flagstaff	Flagstaff Traffic Signal System Planning and Deployment	Planned	SHORT	Phase 1 deployment of a of a centralized traffic signal control system. May include traffic signal controller hardware, software, and equipment, as well as connection to a central control system operated / monitored in a city facility (e.g., city hall or a city signal maintenance shop).

Project List (Project Sequence)

Project Sponsor	Project Name	Status	Timeframe	Description
City of Kingman	Kingman ITS Field Equipment	Planned	MEDIUM	Add ITS Field Equipment such as CCTV and DMS.
City of Kingman	Kingman Traffic Management Center	Planned	MEDIUM	Construct a traffic management center (TMC) to manage ITS field elements (e.g., traffic signal operations, CCTV and DMS).
Lake Havasu Metropolitan Planning Organization (LHMPO)	LHMPO Adaptive Traffic Signal Timing Implementation	Planned	MEDIUM	Plan, design, procure, and deploy equipment, hardware, software, and communications infrastructure necessary to operate an adaptive or traffic responsive traffic signal system in Lake Havasu City
Mohave County	Mohave County Active Traffic Management	Planned	LONG	This project equips county roads within Mohave County with active traffic management methods and field elements to increase peak capacity, smooth traffic flows and enhance safety. Methods may include speed management with variable speed limits, speed feedback, and queue protection; traffic signal management with emergency priority and DSRC capabilities; incident management; and traveler information using DMS, RWIS and websites.
Mohave County	Mohave County Detection and Surveillance	Planned	MEDIUM	This project targets continuous traffic data (volume, speed, classification) collection and archiving for select regionally significant roads. It includes real time monitoring of traffic conditions, susceptible to unplanned events and origin destination data collection.
Mohave County	Mohave County ITS Field Equipment	Planned	MEDIUM	Add various ITS Field Equipment as needed.
Mohave County	Mohave County Traffic Management Center	Planned	LONG	Construct a TMC to manage traffic signal operations, and ITS Field Equipment.
Mohave County	Mohave County Vehicle-to-Infrastructure (V2I) Enabled Rural Highway Traffic Control Signs	Planned	SHORT	Plan, design, procure, and deploy equipment, hardware, software, and communications infrastructure necessary to operate roadside equipment that employs vehicle-to-infrastructure functions and communications to deliver either (1) stop sign gap assist (SSGA) - warning drivers of potential collisions at stop sign intersections or (2) curve speed warning (CSW) – alert provided to drivers approaching a curve at a speed that may be too high for safe travel through that curve .
Northern Arizona Intergovernmental Public Transportation Authority (Mountain Line)	Mountain Line Transit Center	Planned	SHORT	Construct a Transit Management Center.

Project List (Project Sequence)

Project Sponsor	Project Name	Status	Timeframe	Description
Northern Arizona Intergovernmental Public Transportation Authority (Mountain Line)	Mountain Line Transit Field and Vehicle Equipment	Planned	SHORT	Add ITS Transit Field Equipment and equipment to the buses to allow for "next stop" services, and, cameras inside of buses for security, etc.
Pinal County	Pinal County Integration Project	Planned	LONG	Integrate ITS field equipment with TMC. Integrate construction, weather information and maintenance information to the TMC. Add website to share information with travelers.
Pinal County	Pinal County ITS Field Equipment	Planned	MEDIUM	Add ITS Field Equipment such as CCTV and portable DMS.
Pinal County	Pinal County Traffic Management Center	Planned	LONG	Construct a TMC to manage traffic signal operations, CCTV and DMS.
Public and Private Transit Providers	Public and Private Transit Providers - Integrated Multi-Modal Electronic Payment	Planned	LONG	Develop Multi-Modal Electronic Payment (IMMEP) services where transit users can make electronic payment for transit fares, tolls, road use, parking, and other areas requiring electronic payments.
Public and Private Transit Providers	Public and Private Transit Providers - Trip Planning and Payment System	Planned	LONG	Develop trip planning and pre-trip guidance capabilities for transit users. Enable transit users to generate trip plans that include multimodal route and associated service information (e.g., parking information), based on traveler preferences and constraints. The trip plan may be confirmed by the traveler and advanced payment and reservations are accepted and processed.
Sun Corridor Metropolitan Planning Organization (SCMPO)	SCMPO DMS Deployment	Planned	SHORT	Install DMS on I-10 W/B MP 188 and E/B MP 196; SR 387 N/B MP 7, N/B at Kortsen Rd, and S/B on McCartney Rd; SR 87 E/B at SR 287 junction and S/B MP 116.
City of Sedona	Sedona ITS Field Equipment	Planned	MEDIUM	Add ITS Field Equipment such as CCTV and DMS.
City of Sedona	Sedona Smart Parking System	Planned	MEDIUM	City of Sedona in collaboration with other will develop a smart parking system that informs visitors of parking areas, availability, and rates. In addition, the system will provide traveler information, way finding and disseminate information to reduce congestion.
City of Sedona	Sedona Traffic Management Center	Planned	MEDIUM	Construct TMC to manage traffic signal operations, CCTV and DMS.

Project List (Project Sequence)

Project Sponsor	Project Name	Status	Timeframe	Description
City of Sierra Vista	Sierra Vista Adaptive Traffic Signal Control	Planned	MEDIUM	Expansion of upgraded traffic signal control equipment, hardware, software, and communications infrastructure to improve traffic signal operations, including adaptive traffic signal operations capabilities.
City of Sierra Vista	Sierra Vista ITS Field Equipment	Planned	MEDIUM	Add ITS Field Equipment such as Emergency Vehicle Preemption (EVP), CCTV and portable DMS
City of Sierra Vista	Sierra Vista Traffic Management Center Upgrade	Planned	MEDIUM	Upgrade the traffic management center (TMC) and install equipment/software. Connect to ADOT, police, fire, transit, and CBP.
City of Sierra Vista	Sierra Vista Weather Systems	Planned	SHORT	Install weather systems as required.
City of Sierra Vista	Sierra Vista Wireless Radio Communications	Planned	SHORT	Enhance Wireless Traffic signal / ITS Communications, as appropriate.
Various Tribal Entities Statewide	Tribal Fiber Mainline	Planned	SHORT	Tribal communities plan to build fiber optic communications. These projects include the installation of conduit, pull boxes, fiber optic cable, power and node centers in the tribal regions.
Various Tribal Entities Statewide	Tribal ITS Field Equipment	Planned	SHORT	This project procures portable DMS for traveler information, speed feedback signs to warn drivers of excessive speeds, CCTV, and traffic signal coordination capabilities.
Various Tribal Entities Statewide	Tribal Traffic Management Center	Planned	MEDIUM	Construct a TMC to manage traffic signals, CCTV, DMS, and any other appropriate traffic management systems and field devices.
City of Yuma	Yuma ITS Field Equipment	Planned	SHORT	Add ITS Field Equipment such as CCTV, RWIS, DMS, traffic signal systems, portable DMS, and communications infrastructure.
City of Yuma	Yuma ITS Field Equipment Expansion	Planned	MEDIUM	Expansion of ITS Field Equipment deployed in earlier ITS program phases, such as CCTV, RWIS, DMS, traffic signal system upgrades, portable DMS, and communications infrastructure expansion. Other ITS Field Equipment not included in earlier program phases may be included, as appropriate.
City of Yuma	Yuma Traffic Management Center	Planned	SHORT	Construct TMC to manage traffic signal operations, CCTV and DMS, and other ITS field devices. TMC will include various central system software packages to manage ITS Field Equipment.

Appendix J – List of Agreements for the Arizona Statewide ITS Architecture Update

Agreement Title	Agreement Type	Agreement Status	Description	Lead Stakeholder	Associated Stakeholders
ADOT and DPS Intergovernmental	Unspecified	Existing	This Agreement is to provide a framework and guidelines to promote coordinated decision making in planning, development, construction, maintenance and operations of a Freeway Management System (FMS) for the Tucson metro area, hereinafter referred to as the "Project" The FMS will be implemented in phases Phase I covers 1-10 (Ina Road to 6th Avenue) and B-19 (Valencia Road to Irvington Road) Phase I Tucson FMS will include the following elements:- Closed-circuit televisions (CCTV) monitoring system- Variable message sign (VMS) system- Communication system link between Tucson Control Center (TCC) and ADOT Maintenance Office on Grant Road; City of Tucson 911 Center and DPS Dispatch Center- City of Tucson Traffic Control Center (TCC) upgrade	ADOT	ADOT
ADOT and DPS Intergovernmental	Unspecified	Existing	This Agreement is to provide a framework and guidelines to promote coordinated decision making in planning, development, construction, maintenance and operations of a Freeway Management System (FMS) for the Tucson metro area, hereinafter referred to as the "Project" The FMS will be implemented in phases Phase I covers 1-10 (Ina Road to 6th Avenue) and B-19 (Valencia Road to Irvington Road) Phase I Tucson FMS will include the following elements:- Closed-circuit televisions (CCTV) monitoring system- Variable message sign (VMS) system- Communication system link between Tucson Control Center (TCC) and ADOT Maintenance Office on Grant Road; City of Tucson 911 Center and DPS Dispatch Center- City of Tucson Traffic Control Center (TCC) upgrade	ADOT	Arizona Department of Public Safety (DPS)
ADOT and Glendale 2006 - Shared use of FMS	Unspecified	Existing	FMS Agreement including CCTV, DMS, Ramp Meters, Vehicle detectors, node buildings, conduit, pull boxes and other FMS.	ADOT	ADOT

Agreement Title	Agreement Type	Agreement Status	Description	Lead Stakeholder	Associated Stakeholders
ADOT and Glendale 2006 - Shared use of FMS	Unspecified	Existing	FMS Agreement including CCTV, DMS, Ramp Meters, Vehicle detectors, node buildings, conduit, pull boxes and other FMS.	ADOT	Federal Highway Administration (FHWA)
ADOT and Glendale 2010	Unspecified	Existing	Intergovernmental Agreement C-7401 between the State of Arizona and City of Glendale dated 9/14/2010. This agreement passes $150,000 of federal CMAQ funds to the City and designates it for design of a conduit and fiber system on Greenway Road, Thunderbird Road and Cactus Road. Also provides for design, installation, conduit, fiber optic cabling and CCTV to expand ITS.	ADOT	ADOT
ADOT and Glendale 2010	Unspecified	Existing	Intergovernmental Agreement C-7401 between the State of Arizona and City of Glendale dated 9/14/2010. This agreement passes $150,000 of federal CMAQ funds to the City and designates it for design of a conduit and fiber system on Greenway Road, Thunderbird Road and Cactus Road. Also provides for design, installation, conduit, fiber optic cabling and CCTV to expand ITS.	ADOT	Federal Highway Administration (FHWA)
ADOT and McDOT Master ITS Agreement	Unspecified	Existing	This master agreement allows MCDOT and ADOT to collaborate and leverage infrastructure and systems for regional operations to mutually develop ITS projects.	State of Arizona	ADOT
ADOT and McDOT Master ITS Agreement	Unspecified	Existing	This master agreement allows MCDOT and ADOT to collaborate and leverage infrastructure and systems for regional operations to mutually develop ITS projects.	State of Arizona	Maricopa County Department of Transportation (MCDOT)

Agreement Title	Agreement Type	Agreement Status	Description	Lead Stakeholder	Associated Stakeholders
ADOT/Mohave County LED Enhanced Speed Limit Signs	Unspecified	Existing	The improvements proposed in this Agreement, hereinafter referred to as the "Project," includeconducting a study to develop safety performance functions and crash modification factors for traffic speed management zones using R2-1 speed limit signs equipped with speed-actuated intelligent warning systems by establishing test and controlled speed management zones, selection of then (10) traffic speed management zone locations, preparation of installation, design and specifications, obtaining required environmental clearances, and performing a comparison of before and after studies of collected safety data and submittal of the results to FHWA for inclusion in the "Crash Modification Factor Clearinghouse". . Up to twenty (20) solar LED enhanced driver feedback speed limit signs will be installed on rural and arterial collector roadways to support an "after" study of collected safety data. The State will administer design, advertise, bid, award and administer the construction of the Project.	ADOT	ADOT

Agreement Title	Agreement Type	Agreement Status	Description	Lead Stakeholder	Associated Stakeholders
ADOT/Mohave County LED Enhanced Speed Limit Signs	Unspecified	Existing	The improvements proposed in this Agreement, hereinafter referred to as the "Project," includeconducting a study to develop safety performance functions and crash modification factors for traffic speed management zones using R2-1 speed limit signs equipped with speed-actuated intelligent warning systems by establishing test and controlled speed management zones, selection of then (10) traffic speed management zone locations, preparation of installation, design and specifications, obtaining required environmental clearances, and performing a comparison of before and after studies of collected safety data and submittal of the results to FHWA for inclusion in the "Crash Modification Factor Clearinghouse". . Up to twenty (20) solar LED enhanced driver feedback speed limit signs will be installed on rural and arterial collector roadways to support an "after" study of collected safety data. The State will administer design, advertise, bid, award and administer the construction of the Project.	ADOT	Arizona Counties
ADOT-MCDOT - CVISN WZ Notification Project	Unspecified	Existing	Commercial Vehicle Information Systems and Networks (CVISN) Work Zone Notification System Project. This will develop and demonstrate a work zone warning and alert system using connected vehicle technologies to provide in-vehicle information for commercial vehicle operators. Project also includes variable speed limits, queue warning, lane closure warning and vehicle-to-vehicle messages (electronic credentialing and enforcement).	State of Arizona	ADOT

Agreement Title	Agreement Type	Agreement Status	Description	Lead Stakeholder	Associated Stakeholders
ADOT-MCDOT - CVISN WZ Notification Project	Unspecified	Existing	Commercial Vehicle Information Systems and Networks (CVISN) Work Zone Notification System Project. This will develop and demonstrate a work zone warning and alert system using connected vehicle technologies to provide in-vehicle information for commercial vehicle operators. Project also includes variable speed limits, queue warning, lane closure warning and vehicle-to-vehicle messages (electronic credentialing and enforcement).	State of Arizona	Maricopa County Department of Transportation (MCDOT)
ADOT-MCDOT - Fiber for Three Project Locations	Unspecified	Existing	Allows MCDOT to install conduit, pull boxes and fiber optic cable to connect existing MCDOT equipment to the RCN via ADOT existing optic cable at 3 project locations.		ADOT
ADOT-MCDOT - Fiber for Three Project Locations	Unspecified	Existing	Allows MCDOT to install conduit, pull boxes and fiber optic cable to connect existing MCDOT equipment to the RCN via ADOT existing optic cable at 3 project locations.		Maricopa County Department of Transportation (MCDOT)
ADOT-MCDOT - Third party Probe Data and Analysis	Unspecified	Existing	Develop Scope for Acquiring Third Party Probe Data and Analysis Tools. Jointly develop a SOW that ADOT will advertise to establish a statewide, on-call procurement contract.	State of Arizona	ADOT
ADOT-MCDOT - Third party Probe Data and Analysis	Unspecified	Existing	Develop Scope for Acquiring Third Party Probe Data and Analysis Tools. Jointly develop a SOW that ADOT will advertise to establish a statewide, on-call procurement contract.	State of Arizona	Maricopa County Department of Transportation (MCDOT)
AZTech ATS Control at L101 to L303 West Valley	Unspecified	Existing	In association with AZTech, this federal project installs adaptive traffic signal control technology at 52 signalized intersections in four areas along Bell Road/Frank Lloyd Wright Boulevard, from the L101 in the east Valley to the L303 in the west Valley. Four State intersections are involved, but additional, related IGAs involve multiple cities across this corridor. MCDOT coordinates the local match from the cities involved with the Project.	State of Arizona	ADOT

Agreement Title	Agreement Type	Agreement Status	Description	Lead Stakeholder	Associated Stakeholders
AZTech ATS Control at L101 to L303 West Valley	Unspecified	Existing	In association with AZTech, this federal project installs adaptive traffic signal control technology at 52 signalized intersections in four areas along Bell Road/Frank Lloyd Wright Boulevard, from the L101 in the east Valley to the L303 in the west Valley. Four State intersections are involved, but additional, related IGAs involve multiple cities across this corridor. MCDOT coordinates the local match from the cities involved with the Project.	State of Arizona	AZTech

Gilbert Statewide Traffic Signal Coordination Program and Traffic Safety Evaluation	Unspecified	Existing	This project consists of completing a town wide signal analysis, plan and run the transportation model, and implement a system wide traffic signal coordination program.	ADOT	ADOT
Gilbert Statewide Traffic Signal Coordination Program and Traffic Safety Evaluation	Unspecified	Existing	This project consists of completing a town wide signal analysis, plan and run the transportation model, and implement a system wide traffic signal coordination program.	ADOT	Federal Highway Administration (FHWA)
Glendale - CCTV Camera Installations	Unspecified	Existing	This project consists of purchasing and installing CCTV cameras at various locations within city-wide functionally classified roadways.	ADOT	ADOT
Glendale - CCTV Camera Installations	Unspecified	Existing	This project consists of purchasing and installing CCTV cameras at various locations within city-wide functionally classified roadways.	ADOT	Federal Highway Administration (FHWA)
HCRS - ADOT and ADEM Interagency Agreement	Unspecified	Existing	Highway Closure and Road Restriction Subsystem Agreement	ADOT	ADOT
HCRS - ADOT and ADEM Interagency Agreement	Unspecified	Existing	Highway Closure and Road Restriction Subsystem Agreement	ADOT	Arizona Division of Emergency and Military Affairs (DEMA)
HCRS - ADOT and ADEM Interagency Agreement	Unspecified	Existing	Highway Closure and Road Restriction Subsystem Agreement	ADOT	Federal Highway Administration (FHWA)
Highway Closure and Road Restriction Subsystem (HCRS)	Unspecified	Existing	This project includes installing and implementing a Highway Closure and Road Restriction Subsystem (HCRS) which will provide real time data relating to construction locations, traffic maintenance activities, weather related road closures, roadway weather information and traffic accident information to the traveling public.	ADOT	ADOT

Agreement Title	Agreement Type	Agreement Status	Description	Lead Stakeholder	Associated Stakeholders
Highway Closure and Road Restriction Subsystem (HCRS)	Unspecified	Existing	This project includes installing and implementing a Highway Closure and Road Restriction Subsystem (HCRS) which will provide real time data relating to construction locations, traffic maintenance activities, weather related road closures, roadway weather information and traffic accident information to the traveling public.	ADOT	Bureau of Indian Affairs (BIA)
Highway Closure and Road Restriction Subsystem (HCRS)	Unspecified	Existing	This project includes installing and implementing a Highway Closure and Road Restriction Subsystem (HCRS) which will provide real time data relating to construction locations, traffic maintenance activities, weather related road closures, roadway weather information and traffic accident information to the traveling public.	ADOT	Federal Highway Administration (FHWA)
Highway Closure and Road Restriction Subsystem (HCRS)	Unspecified	Existing	This project includes installing and implementing a Highway Closure and Road Restriction Subsystem (HCRS) which will provide real time data relating to construction locations, traffic maintenance activities, weather related road closures, roadway weather information and traffic accident information to the traveling public.	ADOT	Tribal Governments - Statewide
IGA for research of Traffic and ITS studies	Unspecified	Existing	This IGA (Intergovernmental Agreement) is for research of traffic and ITS development studies. It will allow more flexibility between MCDOT and UofA by accommodating federal and grant-funded projects more easily. This was just executed.	Maricopa County Department of Transportation (MCDOT)	Arizona Universities
IGA for research of Traffic and ITS studies	Unspecified	Existing	This IGA (Intergovernmental Agreement) is for research of traffic and ITS development studies. It will allow more flexibility between MCDOT and UofA by accommodating federal and grant-funded projects more easily. This was just executed.	Maricopa County Department of Transportation (MCDOT)	Maricopa County Department of Transportation (MCDOT)

Agreement Title	Agreement Type	Agreement Status	Description	Lead Stakeholder	Associated Stakeholders
MCDOT and ASU Research and CV	Unspecified	Planned	This IGA will be similar to the one with UofA, as MCDOT is interested in working with ASU, including three schools of expertise helping to develop the next generation of transportation technology/studies involving: analysis of impact of technologies (data modeling) on transportation; building obstacle-avoiding products and researching how autonomous car and intersection interact; verification of connected autonomous vehicles - test bed versus real road. ASU (and UofA) are already partners on the Loop 101 Mobility Project.	Maricopa County Department of Transportation (MCDOT)	Arizona Universities

ASU (and UofA) are already partners on the Loop 101 Mobility Project.	Maricopa County Department of Transportation (MCDOT)	Maricopa County Department of Transportation (MCDOT)

Agreement Title	Agreement Type	Agreement Status	Description	Lead Stakeholder	Associated Stakeholders
MCDOT and U of A Research and CV	Unspecified	Existing	This Agreement allows MCDOT to tap into UofA's transportation expertise to perform research-oriented traffic and ITS development studies. Research includes simulation and optimization models in specific applications, studying new transportation hardware and software systems. Related tasks include the MCDOT SMARTDrive Program and related Deployment Readiness of the Multi-Modal Intelligent Traffic Signal System (MMITSS) and investigation of future connected and automated vehicle systems; Investigation of Impact and Opportunities for Automated Driving Vehicles.	Maricopa County Department of Transportation (MCDOT)	ADOT
MCDOT and U of A Research and CV	Unspecified	Existing	This Agreement allows MCDOT to tap into UofA's transportation expertise to perform research-oriented traffic and ITS development studies. Research includes simulation and optimization models in specific applications, studying new transportation hardware and software systems. Related tasks include the MCDOT SMARTDrive Program and related Deployment Readiness of the Multi-Modal Intelligent Traffic Signal System (MMITSS) and investigation of future connected and automated vehicle systems; Investigation of Impact and Opportunities for Automated Driving Vehicles. Phase I Loop 101 Mobiity Project	Unspecified	Planned	Phase I, or the Initiation portion, of the Loop 101 Mobility Project. Signficant partnership involved, with MCDOT and ADOT being the co-lead to develop a deployment site for large scale installation and operation of advanced transportation technologies for improving safety, efficiency and system performance. This Phase involves coalition building, deloping the Systems Engineering Management Plan, developing the ICM Plan, Project Management Support and Reporting. Phase I sets the stage for the design and installation of various technologies: Decision Support Systems; Connected Vehicle Technology for transit, incident response vehicles and roadside deployment; Adaptive Ramp Meeting; Adaptive Traffice Signal Control; ICM Mobile Application Suite.	State of Arizona	ADOT

Cities and Towns ITS Field Equipment	Hardware Standards for Dynamic Message Signs (DMS) With NTCIP Requirements	NEMA TS4	National Electrical Manufacturers Association
Cities and Towns ITS Field Equipment	Intelligent transport systems -- Communications access for land mobiles (CALM) -- Architecture	ISO 21217	International Organization for Standardization
Cities and Towns ITS Field Equipment	Intelligent Transportation System Standard Specification for Roadside Cabinets	ITE ATC 5301	Advanced Traffic Controller Joint Committee
Cities and Towns ITS Field Equipment	Model 2070 Controller Standard	ITE ATC 5202	Advanced Traffic Controller Joint Committee
Cities and Towns ITS Field Equipment	Portable Traffic Signal Systems (PTSS) Standard	NEMA TS 5	National Electrical Manufacturers Association
Cities and Towns ITS Field Equipment	Security Requirements for Cryptographic Modules	NIST FIPS PUB 140-2	National Institute for Standards and Technology
Cities and Towns ITS Field Equipment	Traffic Controller Assemblies with NTCIP Requirements	NEMA TS2	National Electrical Manufacturers Association

ElementName	Standard Title	Standard Number	SDO
Cities and Towns MCO Dispatch	Cyber and Physical Security for Intelligent Transportation Systems	NEMA TS 8	National Electrical Manufacturers Association
Cities and Towns MCO Dispatch	Intelligent transport systems -- Communications access for land mobiles (CALM) -- Architecture	ISO 21217	International Organization for Standardization
Cities and Towns MCO Dispatch	Security Requirements for Cryptographic Modules	NIST FIPS PUB 140-2	National Institute for Standards and Technology
Cities and Towns MCO Vehicles	Intelligent transport systems -- Communications access for land mobiles (CALM) -- Architecture	ISO 21217	International Organization for Standardization
Cities and Towns MCO Vehicles	Security Requirements for Cryptographic Modules	NIST FIPS PUB 140-2	National Institute for Standards and Technology
Cities and Towns Police and Fire Dispatch	Cyber and Physical Security for Intelligent Transportation Systems	NEMA TS 8	National Electrical Manufacturers Association
Cities and Towns Police and Fire Dispatch	Intelligent transport systems -- Communications access for land mobiles (CALM) -- Architecture	ISO 21217	International Organization for Standardization
Cities and Towns Police and Fire Dispatch	Security Requirements for Cryptographic Modules	NIST FIPS PUB 140-2	National Institute for Standards and Technology
Cities and Towns Police and Fire Vehicles	Intelligent transport systems -- Communications access for land mobiles (CALM) -- Architecture	ISO 21217	International Organization for Standardization
Cities and Towns Police and Fire Vehicles	Security Requirements for Cryptographic Modules	NIST FIPS PUB 140-2	National Institute for Standards and Technology
Cities and Towns Public Works	Cyber and Physical Security for Intelligent Transportation Systems	NEMA TS 8	National Electrical Manufacturers Association
Cities and Towns Public Works	Intelligent transport systems -- Communications access for land mobiles (CALM) -- Architecture	ISO 21217	International Organization for Standardization
Cities and Towns Public Works	Security Requirements for Cryptographic Modules	NIST FIPS PUB 140-2	National Institute for Standards and Technology
Cities and Towns Public Works Vehicles	Intelligent transport systems -- Communications access for land mobiles (CALM) -- Architecture	ISO 21217	International Organization for Standardization
Cities and Towns Public Works Vehicles	Security Requirements for Cryptographic Modules	NIST FIPS PUB 140-2	National Institute for Standards and Technology
Cities and Towns TIC and Website	Intelligent transport systems -- Communications access for land mobiles (CALM) -- Architecture	ISO 21217	International Organization for Standardization

ElementName	Standard Title	Standard Number	SDO
Cities and Towns TIC and Website	Security Requirements for Cryptographic Modules	NIST FIPS PUB 140-2	National Institute for Standards and Technology
Cities and Towns TMC-TOC	Cyber and Physical Security for Intelligent Transportation Systems	NEMA TS 8	National Electrical Manufacturers Association
Cities and Towns TMC-TOC	Intelligent transport systems -- Communications access for land mobiles (CALM) -- Architecture	ISO 21217	International Organization for Standardization
Cities and Towns TMC-TOC	Security Requirements for Cryptographic Modules	NIST FIPS PUB 140-2	National Institute for Standards and Technology
Cities and Towns Transit Dispatch	Intelligent transport systems -- Communications access for land mobiles (CALM) -- Architecture	ISO 21217	International Organization for Standardization
Cities and Towns Transit Dispatch	Security Requirements for Cryptographic Modules	NIST FIPS PUB 140-2	National Institute for Standards and Technology
Cities and Towns Transit Vehicles	Intelligent transport systems -- Communications access for land mobiles (CALM) -- Architecture	ISO 21217	International Organization for Standardization
Cities and Towns Transit Vehicles	Security Requirements for Cryptographic Modules	NIST FIPS PUB 140-2	National Institute for Standards and Technology
Cities and Towns Weather Flood Alerts	Advanced Transportation Controller	ITE ATC 5201	Advanced Traffic Controller Joint Committee
Cities and Towns Weather Flood Alerts	Application Programming Interface Standard for the Advanced Transportation Controller	ITE ATC 5401	Advanced Traffic Controller Joint Committee
Cities and Towns Weather Flood Alerts	Cyber and Physical Security for Intelligent Transportation Systems	NEMA TS 8	National Electrical Manufacturers Association
Cities and Towns Weather Flood Alerts	Hardware Standards for Dynamic Message Signs (DMS) With NTCIP Requirements	NEMA TS4	National Electrical Manufacturers Association
Cities and Towns Weather Flood Alerts	Intelligent transport systems -- Communications access for land mobiles (CALM) -- Architecture	ISO 21217	International Organization for Standardization
Cities and Towns Weather Flood Alerts	Intelligent Transportation System Standard Specification for Roadside Cabinets	ITE ATC 5301	Advanced Traffic Controller Joint Committee
Cities and Towns Weather Flood Alerts	Model 2070 Controller Standard	ITE ATC 5202	Advanced Traffic Controller Joint Committee
Cities and Towns Weather Flood Alerts	Portable Traffic Signal Systems (PTSS) Standard	NEMA TS 5	National Electrical Manufacturers Association

ElementName	Standard Title	Standard Number	SDO
Cities and Towns Weather Flood Alerts	Security Requirements for Cryptographic Modules	NIST FIPS PUB 140-2	National Institute for Standards and Technology
Cities and Towns Weather Flood Alerts	Traffic Controller Assemblies with NTCIP Requirements	NEMA TS2	National Electrical Manufacturers Association
Cities and Towns Wireless Radio	Intelligent transport systems -- Communications access for land mobiles (CALM) -- Architecture	ISO 21217	International Organization for Standardization
Cities and Towns Wireless Radio	Security Requirements for Cryptographic Modules	NIST FIPS PUB 140-2	National Institute for Standards and Technology
Commercial Vehicle Driver and Vehicle Verification Systems	Cyber and Physical Security for Intelligent Transportation Systems	NEMA TS 8	National Electrical Manufacturers Association
Commercial Vehicle Driver and Vehicle Verification Systems	Intelligent transport systems -- Communications access for land mobiles (CALM) -- Architecture	ISO 21217	International Organization for Standardization
Commercial Vehicle Driver and Vehicle Verification Systems	Security Requirements for Cryptographic Modules	NIST FIPS PUB 140-2	National Institute for Standards and Technology
Commercial Vehicle Enforcement Partnership System	Cyber and Physical Security for Intelligent Transportation Systems	NEMA TS 8	National Electrical Manufacturers Association
Commercial Vehicle Enforcement Partnership System	Intelligent transport systems -- Communications access for land mobiles (CALM) -- Architecture	ISO 21217	International Organization for Standardization
Commercial Vehicle Enforcement Partnership System	Security Requirements for Cryptographic Modules	NIST FIPS PUB 140-2	National Institute for Standards and Technology
Commercial Vehicles	Intelligent transport systems -- Communications access for land mobiles (CALM) -- Architecture	ISO 21217	International Organization for Standardization

New Mexico Statewide TMC	Cyber and Physical Security for Intelligent Transportation Systems	NEMA TS 8	National Electrical Manufacturers Association
New Mexico Statewide TMC	Intelligent transport systems -- Communications access for land mobiles (CALM) -- Architecture	ISO 21217	International Organization for Standardization
New Mexico Statewide TMC	Security Requirements for Cryptographic Modules	NIST FIPS PUB 140-2	National Institute for Standards and Technology
New Mexico Truck Parking Availability System	Intelligent transport systems -- Communications access for land mobiles (CALM) -- Architecture	ISO 21217	International Organization for Standardization
New Mexico Truck Parking Availability System	Security Requirements for Cryptographic Modules	NIST FIPS PUB 140-2	National Institute for Standards and Technology
NOAA _National Weather Service	Intelligent transport systems -- Communications access for land mobiles (CALM) -- Architecture	ISO 21217	International Organization for Standardization
NOAA _National Weather Service	Security Requirements for Cryptographic Modules	NIST FIPS PUB 140-2	National Institute for Standards and Technology

ElementName	Standard Title	Standard Number	SDO
PAG Planning Traffic Database	Cyber and Physical Security for Intelligent Transportation Systems	NEMA TS 8	National Electrical Manufacturers Association
PAG Planning Traffic Database	Intelligent transport systems -- Communications access for land mobiles (CALM) -- Architecture	ISO 21217	International Organization for Standardization
PAG Planning Traffic Database	Security Requirements for Cryptographic Modules	NIST FIPS PUB 140-2	National Institute for Standards and Technology
PAG RTDN Communications System	Intelligent transport systems -- Communications access for land mobiles (CALM) -- Architecture	ISO 21217	International Organization for Standardization
PAG RTDN Communications System	Security Requirements for Cryptographic Modules	NIST FIPS PUB 140-2	National Institute for Standards and Technology
Payment Administration Center	Cyber and Physical Security for Intelligent Transportation Systems	NEMA TS 8	National Electrical Manufacturers Association
Payment Administration Center	Intelligent transport systems -- Communications access for land mobiles (CALM) -- Architecture	ISO 21217	International Organization for Standardization
Payment Administration Center	Security Requirements for Cryptographic Modules	NIST FIPS PUB 140-2	National Institute for Standards and Technology
Personal Information Devices for Travelers	Intelligent transport systems -- Communications access for land mobiles (CALM) -- Architecture	ISO 21217	International Organization for Standardization
Personal Information Devices for Travelers	Security Requirements for Cryptographic Modules	NIST FIPS PUB 140-2	National Institute for Standards and Technology
POE Administration Center	Intelligent transport systems -- Communications access for land mobiles (CALM) -- Architecture	ISO 21217	International Organization for Standardization
POE Administration Center	Security Requirements for Cryptographic Modules	NIST FIPS PUB 140-2	National Institute for Standards and Technology
POE Data Archive	Cyber and Physical Security for Intelligent Transportation Systems	NEMA TS 8	National Electrical Manufacturers Association
POE Data Archive	Intelligent transport systems -- Communications access for land mobiles (CALM) -- Architecture	ISO 21217	International Organization for Standardization
POE Data Archive	Security Requirements for Cryptographic Modules	NIST FIPS PUB 140-2	National Institute for Standards and Technology
POE Roadway Inspection Systems	Intelligent transport systems -- Communications access for land mobiles (CALM) -- Architecture	ISO 21217	International Organization for Standardization

ElementName	Standard Title	Standard Number	SDO
POE Roadway Inspection Systems	Security Requirements for Cryptographic Modules	NIST FIPS PUB 140-2	National Institute for Standards and Technology
Private Transit Routing Service Provider	Intelligent transport systems -- Communications access for land mobiles (CALM) -- Architecture	ISO 21217	International Organization for Standardization
Private Transit Routing Service Provider	Security Requirements for Cryptographic Modules	NIST FIPS PUB 140-2	National Institute for Standards and Technology
Private Vehicle OBE	Intelligent transport systems -- Communications access for land mobiles (CALM) -- Architecture	ISO 21217	International Organization for Standardization
Private Vehicle OBE	Security Requirements for Cryptographic Modules	NIST FIPS PUB 140-2	National Institute for Standards and Technology
Public Private Traveler Information	Intelligent transport systems -- Communications access for land mobiles (CALM) -- Architecture	ISO 21217	International Organization for Standardization
Public Private Traveler Information	Security Requirements for Cryptographic Modules	NIST FIPS PUB 140-2	National Institute for Standards and Technology
Rail Grade Wayside Warning Systems	Advanced Transportation Controller	ITE ATC 5201	Advanced Traffic Controller Joint Committee
Rail Grade Wayside Warning Systems	Application Programming Interface Standard for the Advanced Transportation Controller	ITE ATC 5401	Advanced Traffic Controller Joint Committee
Rail Grade Wayside Warning Systems	Cyber and Physical Security for Intelligent Transportation Systems	NEMA TS 8	National Electrical Manufacturers Association
Rail Grade Wayside Warning Systems	Hardware Standards for Dynamic Message Signs (DMS) With NTCIP Requirements	NEMA TS4	National Electrical Manufacturers Association
Rail Grade Wayside Warning Systems	Intelligent transport systems -- Communications access for land mobiles (CALM) -- Architecture	ISO 21217	International Organization for Standardization
Rail Grade Wayside Warning Systems	Intelligent Transportation System Standard Specification for Roadside Cabinets	ITE ATC 5301	Advanced Traffic Controller Joint Committee
Rail Grade Wayside Warning Systems	Model 2070 Controller Standard	ITE ATC 5202	Advanced Traffic Controller Joint Committee
Rail Grade Wayside Warning Systems	Portable Traffic Signal Systems (PTSS) Standard	NEMA TS 5	National Electrical Manufacturers Association
Rail Grade Wayside Warning Systems	Security Requirements for Cryptographic Modules	NIST FIPS PUB 140-2	National Institute for Standards and Technology

ElementName	Standard Title	Standard Number	SDO
Rail Grade Wayside Warning Systems	Traffic Controller Assemblies with NTCIP Requirements	NEMA TS2	National Electrical Manufacturers Association
Safety Fitness Electronic Record (SAFER)	Intelligent transport systems -- Communications access for land mobiles (CALM) -- Architecture	ISO 21217	International Organization for Standardization
Safety Fitness Electronic Record (SAFER)	Security Requirements for Cryptographic Modules	NIST FIPS PUB 140-2	National Institute for Standards and Technology
State Universities Data Archives	Cyber and Physical Security for Intelligent Transportation Systems	NEMA TS 8	National Electrical Manufacturers Association
State Universities Data Archives	Intelligent transport systems -- Communications access for land mobiles (CALM) -- Architecture	ISO 21217	International Organization for Standardization
State Universities Data Archives	Security Requirements for Cryptographic Modules	NIST FIPS PUB 140-2	National Institute for Standards and Technology
Transit Providers Dispatch (Public and Private)	Intelligent transport systems -- Communications access for land mobiles (CALM) -- Architecture	ISO 21217	International Organization for Standardization
Transit Providers Dispatch (Public and Private)	Security Requirements for Cryptographic Modules	NIST FIPS PUB 140-2	National Institute for Standards and Technology
Transit Providers Vehicles (Public and Private)	Intelligent transport systems -- Communications access for land mobiles (CALM) -- Architecture	ISO 21217	International Organization for Standardization
Transit Providers Vehicles (Public and Private)	Security Requirements for Cryptographic Modules	NIST FIPS PUB 140-2	National Institute for Standards and Technology
Tribal Data Archive	Cyber and Physical Security for Intelligent Transportation Systems	NEMA TS 8	National Electrical Manufacturers Association
Tribal Data Archive	Intelligent transport systems -- Communications access for land mobiles (CALM) -- Architecture	ISO 21217	International Organization for Standardization
Tribal Data Archive	Security Requirements for Cryptographic Modules	NIST FIPS PUB 140-2	National Institute for Standards and Technology
Tribal Fiber for Communications	Intelligent transport systems -- Communications access for land mobiles (CALM) -- Architecture	ISO 21217	International Organization for Standardization
Tribal Fiber for Communications	Security Requirements for Cryptographic Modules	NIST FIPS PUB 140-2	National Institute for Standards and Technology
Tribal ITS Field Equipment	Advanced Transportation Controller	ITE ATC 5201	Advanced Traffic Controller Joint Committee

ElementName	Standard Title	Standard Number	SDO
Tribal ITS Field Equipment	Application Programming Interface Standard for the Advanced Transportation Controller	ITE ATC 5401	Advanced Traffic Controller Joint Committee
Tribal ITS Field Equipment	Cyber and Physical Security for Intelligent Transportation Systems	NEMA TS 8	National Electrical Manufacturers Association
Tribal ITS Field Equipment	Hardware Standards for Dynamic Message Signs (DMS) With NTCIP Requirements	NEMA TS4	National Electrical Manufacturers Association
