Legend:

	<p><u>Subsystem Box</u> Subsystems are individual pieces of the Intelligent Transportation System defined by ARC-IT. Subsystems are defined at three levels of hierarchy: ITS Objects, Classes, and Functional Subsystems. They are the principle structural element of the physical view of ARC-IT.</p>
	<p><u>Terminator Box</u> Terminators define the boundary of an architecture. ARC-IT terminators represent the people, systems, and general environment that interface to ITS. The interfaces between terminators and the subsystems and processes within ARC-IT are defined, but no functional requirements are allocated to terminators. The functional and physical view of ARC-IT both contain the same set of terminators.</p>
	<p><u>Communications Box</u> Some of the physical objects defined in ARC-IT primarily provide a communications capability that enables other physical objects to share information.</p>
