Table of Contents

The APL is a list of categorized products that have been determined to meet ADOT’s Standard and Stored Specifications, and have been approved for potential use on roadway construction projects. The APL is a resource for ADOT staff, local public agencies, and private industry. ADOT is not obligated to use any products listed on the APL. Having a product on the APL does not exempt a vendor from submitting a COC or COA prior to the product’s use in construction.

704 – Thermoplastic Pavement Marking

704 Profile Pavement Marking ADOT Specifications: By special provision contact C&S for approved version. Stored spec. currently under development ADOT Drawings: None Responsible Section: Traffic Group					
PEP ID	Product	Notes	Approval Date	Expiration Date	Manufacturer/Contact
		Note: (1) Profile markings shall be used at elevations of 3,800 feet and less. These types of pavement markings are not suitable for snow removal areas. (2) The use of this type of product requires an item number special provision. An approved version of this special provision is available from ADOT Contracts and Specifications. (3) Profile pavement marking require the use of specialized installation equipment. Due to the expense of this equipment a minimum quantity of 40,000 feet should be involved on a project to make the utilization of this type of marking system cost effective. (4) For shoulder applications profile pavement marking systems are intended to be used as an alternative to contiguous ground-in longitudinal rumble strip. However, profile markings should only be specified when some reason prevents the use of the ground-in rumble strip (e.g. when shoulders are less than 4 feet wide and there are obstructions immediately adjacent to the roadway and/or there is significant bike use, etc.) (5) Profile markings can be used on the centerline. (6) The approval of other profile pavement marking products other than those listed, requires at least a six-month Arizona based road test and proof of other successful applications.

12754	Flint Trading Bundy		7/21	7/26	Ennis-Flint, Inc (Dennis Evangelista)
<p>Note:</p> <p>(1) This adhesive is not suitable for large quantity installations of raised pavement markers (RPMs) where a high degree of production is needed. It is intended to be used when there is only a small number of RPMs to be installed and/or for minor repair and maintenance work. In performance it appears to be an equal to bituminous adhesive.</p> <p>(2) Before melt-in-place RPM adhesive can be accepted as an equal to those adhesive products listed here in, it must pass a two-year in service road test on a site specified by TCPEC (e.g. westbound I-10 at Deck Tunnel). The tested adhesives must retain the RPMs to the pavement surface for the duration of the test. The required test period of two years may be made longer by TCPEC based on the results of on going tests.</p> <p>(3) Accelerated acceptance of new adhesives is possible after one year of successful performance on the approved TCPEC test deck and if the new adhesive has also been similarly tested and approved by other agencies (e.g. Texas, California).</p>
