

ADOT Sonoran Corridor (SR 410) Study

I-19 to I-10 Route Conceptual Design and Environmental Impact Study

ABOUT THE SONORAN CORRIDOR PROJECT

The Arizona Department of Transportation (ADOT) has begun the next study phase for the Sonoran Corridor, also known as State Route 410, a proposed new freeway in Pima County that would connect Interstate 19 and Interstate 10, south of Tucson International Airport. The Sonoran Corridor would help improve the local transportation system by providing a new, faster connection to the airport and other activity centers, reducing traffic congestion and shortening east-west freight movement between southern Arizona and Mexico. In 2021, ADOT completed a Tier 1 Environmental Impact Study (EIS) and issued a Record of Decision for the Sonoran Corridor, which identified a selected 20.5-mile, 2,000-foot-wide corridor route.

The current study, which includes a Tier 2 Environmental Impact Statement and Design Concept Report, will:

- Develop and evaluate a range of 400-foot-wide freeway alignment alternatives within the 2,000-foot corridor. The study will also evaluate a “no-build” alternative.
- Evaluate environmental considerations and proposed mitigation.
- Develop design concepts and features, such as interchange locations and bridges.
- Provide several opportunities for public and stakeholder input throughout the process.
- Select a preferred freeway alternative, which would include the alignment, interchange locations and other design features.

STUDY PURPOSE

The Tier 2 study's purpose is to develop a range of freeway alignment alternatives from which an approximately 400-foot-wide preferred right-of-way alignment will be identified within the Tier 1 selected corridor.

A new freeway would:

- Improve vehicle mobility and the transportation system.
- Improve access to existing and future activity centers.
- Reduce persistent traffic backups and road congestion.
- Address existing and future high-growth areas.
- Improve and shorten east-west freight movement to and from Mexico and southern Arizona.

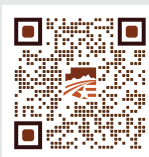

YOUR INPUT IS IMPORTANT!

ADOT welcomes your questions and comments on this study through the below options.
