

1114 REMEASUREMENT

1114-1 General

Ditches and dikes that are measured by the linear foot shall be remeasured by the survey crew after they are completed and these measurements and locations recorded on the as-built plans.

Numerous other items require remeasurement and documentation such as: line fence and gates, cattle guards, curb and gutter, embankment curb, guide posts, bank protection, right-of-way markers, catch basins, and guardrail.

1114-2 Slides

If slides have occurred in cut sections, the Resident Engineer shall make a determination as to whether such slides are payable under Specification 203. If found to be payable, the volume of the original space which the slide occupied shall be measured and computed in cubic yards (cubic meters) by the average end area method and included in the quantity of roadway excavation for payment at the price bid for roadway excavation.

Likewise, any excavation made below grade, if made by the direction of the Engineer, shall be similarly measured and included in the quantities of roadway excavation.

1114-3 Overbreakage

Overbreakage is not measured or paid for. The Surveyor must become familiar with that portion of Section 203, which deals with the measurement and payment for the item of "roadway excavation originating outside of the neat lines of cut slopes as a result of necessary blasting operations." This section and detail shall be followed in the measurement and payment of this item. (The term "overbreakage" is not used in the Standard Specifications.)
