

904 CHAIN LINK CABLE BARRIER

Chain-link cable barrier is a safety device, it is important that safety hazards are not created when constructing it.

It must be noted that the concrete anchor blocks must be flush with the ground so that they do not catch on a vehicle passing over them. At the same time, they must be well-drained so that water doesn't collect where it can corrode the hardware or soften the ground around the block.

The distance from the barrier to the top of the slope must be as specified on the plans. If the distance is too short, the barrier will not stop a vehicle before it drops off the slope.

All the fittings must be accurately placed and tightened as specified.

As with all safety devices, it is legally imperative that the barriers are built strictly according to the plans.
