

## **420 REFLECTORIZED PAVEMENT MARKERS**

---

Reflectorized pavement markers (RPMs) are desirable as positioning guides with other longitudinal markings on all State highways. RPMs are navigational devices for guiding motorists especially during darkness and when the permanent striping may be obscured due to inclement weather.

RPMs shall not be installed where snow plows would damage the markers and require an unusual amount of replacement.

The spacing and number of RPMs should be based on Standard Drawing M-19.
